Priorities: Pierce's Disease, 2004-10-28 The glassy winged sharpshooter is one of the more recent invasive pests to afflict California agriculture. The insect transmits a bacterial pathogen that causes Pierce's disease, which has impaired production of wine table and raisin grapes in California. The report recommends strengthening the process and the priorities for research funded by state agencies and wine industry groups to address Pierce's disease and its vector. Research should be focused on identifying feasible options for controlling the spread of the disease and providing sustainable approaches that are adaptable and affordable over the long term. Several avenues of research be pursued more intensely including the genetic makeup of the pathogen that triggers Pierce's disease, understanding the mechanisms that make grapes resistant to the disease, the possibilities of introducing predator enemies to the sharpshooter and new ways to manage the planting of crops to help avoid spread of the disease. *Colleges of Agriculture at the Land Grant Universities* National Research

Council, Board on Agriculture, Committee on the Future of the Colleges of Agriculture in the Land Grant System, 1995-09-27 Although few Americans work as farmers these days, agriculture on the whole remains economically important, playing a key role in such contemporary issues as consumer health and nutrition, worker safety and animal welfare, and environmental protection. This publication provides a comprehensive picture of the primary education system for the nation's agriculture industry: the land grant colleges of agriculture. *Colleges of Agriculture at the Land Grant Universities* informs the public debate about the challenges that will shape the future of these colleges and serves as a foundation for a second volume which will present recommendations for policy and institutional changes in the land grant system. This book reviews the legislative history of the land grant system from its establishment in 1862 to the 1994 act conferring land grant status on Native American colleges. It describes trends that have shaped agriculture and agricultural education over the decades: the shift of labor from farm to factory, reasons for and effects of increased productivity and specialization, the rise of the corporate farm and more. The committee reviews the system's three-part mission: education, research, and extension service, and through this perspective documents the changing nature of funding and examines the unique structure of the U.S. agricultural research and education system. Demographic data on faculties, students, extension staff, commodity and funding clusters, and geographic specializations profile the system and identify similarities and differences among the colleges of agriculture. Trends in funding and a host of other issues. The tables in the appendix provide further itemization about general population distribution, student and educator demographics, types of degree programs, and funding allocations. Concise commentary and informative graphics augment the detailed statistical presentations. This book will be important to policymakers, administrators, educators, researchers, and students of agriculture. *National Academy Press ... Publications Catalog*, 1985
