Nutrition Dorothy A. Wenck, Martin Baren, Sat Paul Dewan, 1980 Adult Nutrition Education Materials, January 1982 - October 1988 Holly Berry Irving, 1989 Adult/patient Nutrition Education Materials Natalie A. Updegrove, Natalie Updegrove Partridge, 1990 **Quick Bibliography Series**, 1976 **Current Catalog** National Library of Medicine (U.S.), 1980 First multi year cumulation covers six years 1965-70 **Ptilochronology** Thomas C. Grubb, 2006-06-29 This is the first book to summarize the methods, conceptual issues and results of studies using the interpretation of feather growth rates as an index of nutritional condition in birds. The author has coined the term ptilochronology, literally the study of feather time to describe this technique which relies on the fact that as a feather grows it produces visible growth bars. Both the technique and its conceptual foundations have been applied worldwide to numerous studies of avian evolution, ecology and conservation biology. The author reviews this work, chronicles the various criticisms that have been made and describes how these have influenced the development of ptilochronology. He goes on to suggest experimental methodologies and analytical techniques to safeguard against invalid results. A final chapter summarises this new technique's contribution to avian biology and suggests potential applications and a future research agenda. An appendix details specific measurements and describes the methodology associated with ptilochronology. Ptilochronology provides a practical resource as well as a conceptual understanding of how this technique can be used to address important questions in avian biology. It will be of relevance and use to professional avian biologists and ornithologists as well as to graduate students of avian behavioural ecology, evolution and conservation. **Hearings** United States. Nutrition and the World Food Problem M. Rechcigl Jr., 1980-04-08 **Nutrition and economic development** Ecker, Olivier, Al-Riffai, Perrihan, Breisinger, Clemens, El-Batrawy, Rawia, 2016-11-15 This book's main hypothesis is that Egypt's large food subsidy system has been ineffective in reducing undernutrition; in fact, it may have contributed to sustaining and even aggravating both nutrition challenges. For a long time the subsidy system provided only calorie-rich foods at very low and constant prices and with quotas much above dietary recommendations. This system has created incentives to consume calorie-overladen and unbalanced diets, increasing the risks of child and maternal overnutrition and, at high subsidy levels, the risk of inadequate child nutrition. Moreover, the large public budget allocated to the food subsidies is unavailable for possibly more nutrition-beneficial spending such as for child and maternal nutrition-specific interventions. The authors' findings consistently suggest that, in addition to the well-known economic rationale for reforming the Egyptian food subsidy system, there are strong reasons to reform food subsidies due to nutrition and public health concerns. A fundamental food subsidy reform process has been under way since June 2014. The already implemented changes can be expected to have reduced some incentives for overconsumption and may have positive dietary effects. However, further major reform efforts are needed to transform the current subsidy system into a key policy instrument in the fight against malnutrition. The findings of this
