**Prevention and Management of Osteoporosis** World Health Organization,2003-12-31 Bone is hard tissue that is in a constant state of flux being built up by bone forming cells called osteoblasts while also being broken down or resorbed by cells known as

osteoclasts During childhood and adolescence bone formation is dominant bone length and girth increase with age ending at early adulthood when peak bone mass is attained Males generally exhibit a longer growth period resulting in bones of greater size and overall strength In males after the age of 20 bone resorption becomes predominant and bone mineral content declines about 4% per decade Females tend to maintain peak mineral content until menopause at which time it declines about 15% per decade Osteoporosis is a disease characterized by low bone mass and structural deterioration of bone tissue leading to bone fragility and an increased susceptibility to fractures especially of the hip spine and wrist Osteoporosis occurs primarily as a result of normal ageing but can arise as a result of impaired development of peak bone mass e g due to delayed puberty or undernutrition or excessive bone loss during adulthood e g due to estrogen deficiency in women undernutrition or corticosteroid use Osteoporosis induced fractures cause a great burden to society Hip fractures are the most serious as they nearly always result in hospitalization are fatal about 20% of the time and produce permanent disability about half the time Fracture rates increase rapidly with age and the lifetime risk of fracture in 50 year old women is about 40% similar to that for coronary heart disease In 1990 there were 1.7 million hip fractures alone worldwide with changes in population demographics this figure is expected to rise to 6 million by 2050 To help describe the nature and consequences of osteoporosis as well as strategies for its prevention and management a WHO Scientific Group meeting of international experts was held in Geneva which resulted in this technical report This monograph describes in detail normal bone development and the causes and risk factors for developing osteoporosis The burden of osteoporosis is characterized in terms of mortality morbidity and economic costs Methods for its prevention and treatment are discussed in detail for both pharmacological and non pharmacological approaches For each approach the strength of the scientific evidence is listed The report also provides cost analysis information for potential interventions and discusses important aspects of developing national policies to deal with osteoporosis Recommendations are made to the general population care providers health administrators and researchers Lastly national organizations and support groups are listed by country

*Nutritional Aspects of Bone Health* Susan A Lanham-New, Jean-Phillippe Bonjour, 2007-10-31 Nutritional Aspects of Bone Health provides an in depth review of the role of diet in the development and maintenance of bone health throughout the lifecycle and prevention of osteoporosis in later life The book is multi authored by the world's leading researchers in this area who have come together to formulate the first ever textbook on nutritional aspects of bone health and includes the current and cutting edge science underpinning the prevention of bone disease The book is structured such that in the first section an overview is provided on what is meant by the terms bone health and osteoporosis and includes key areas such as epidemiology genetics and the impact of non nutritional exogenous factors influencing the skeleton The second section details the established nutritional factors affecting bone health namely calcium and vitamin D Section three focuses on the role of macronutrients and macrominerals in bone health namely protein phosphorus sodium and potassium including the criticality of acid base

homeostasis to skeletal integrity Section four addresses the effects of microminerals trace elements vitamin K vitamin A and isoflavones on bone Section five focuses attention on key issues connected with the influence of diet and anorexia and bulimia on bone health including nutrition and bone growth nutrient gene interactions nutrient drug interactions and the final section discusses the effect of diet on reduction of fracture risk the cost effectiveness of nutritional supplements and nutritional strategies for prevention and treatment of osteoporosis The book is targeted at a number of key audiences Whilst there is a focus on the academic research world and those principally involved in education at both undergraduate and postgraduate levels the book will also be of considerable interest to those participating in the treatment and prevention of osteoporosis namely those working in the medical and health promotion fields Furthermore Nutritional Aspects of Bone Health will be of particular interest to the food industry as the popularity of foods designed to target specific health issues increases and nutritional therapy has a critical role to play in this major public health problem
