Nutrition and the Elderly Barbara E. Millen, 1979 Abstract The nutritional needs of the elderly and federal programs designed to help meet these needs are discussed. Many factors affect the nutritional status of the elderly, including economic, medical, and environmental conditions. Many of the elderly have insufficient incomes to fulfill their nutritional needs. Many have chronic illnesses affecting the intake and utilization of nutrients. Others are prohibited from obtaining help because of distance, ignorance, or fear. Many elderly have protein and vitamin deficient diets while ingesting large amounts of fat and carbohydrates. To correct these inequities, the Title VII Nutrition Program for the Aged was funded beginning in 1973. While the initial program was limited in scope, in 1975 it was expanded to more sites and served more of the elderly. **Nutrition, Aging, and the Elderly** D.E. Danford, H.N. Munro, 2013-11-11 The proportion of the population over 65 years of age is increasing steadily in most industrialized countries. In the United States, the proportion of elderly people has risen from four percent in 1900 to 11 % in 1978 and is projected to be 14% by the year 2000. The occurrence of debilitating chronic diseases in the elderly increases with each additional year. These diseases, along with the natural loss of tissue function that occurs throughout adult life, impose a heavy burden on the health care system. Nutrition plays an important etiologic role in many of these degenerative changes. Consequently, the aging segment of the population presents a challenge to the nutrition scientist who should be able to recommend optimal intakes of nutrients to minimize the functional losses associated with aging and to optimize the health of those already elderly. This sixth volume in the series *Human Nutrition: A Comprehensive Treatise* provides a conspectus of the various interactions of nutrition with the aging process and a comprehensive survey of current knowledge of the amounts of individual nutrients needed by the elderly. The volume begins with a general survey of the multifaceted relationship of nutrition to aging, followed by four chapters on how nutrition can affect age-related changes in selected body functions. The next six chapters cover the available evidence regarding the needs of the elderly for dietary energy, protein, calcium, trace elements, vitamins, and fiber.
