Reinsurance Regulation: A Contemporary and Comparative Study Wallace Wang, 2003-01-01 We seem to be living at a time when insurance is strained to the breaking point From hurricanes and earthquakes to terrorist attacks and threats of nuclear devastation enormous risks to life and property and accompanying liabilities proliferate on an unprecedented scale Insurer insolvency is not yet common but it is not unusual either And at the root of such failures often lies the compound failure of uncollectable reinsurance This important book proposes that a significant part of the emerging insurance crisis results from inadequate regulation of reinsurance In a detailed and cogent analysis of what an effective regulatory regime for reinsurance must entail the author examines such factors as the following direct supervision of reinsurers versus supervision of reinsurance policies models from developed countries US UK EU and international organisations Organization for Economic Cooperation and Development International Association of Insurance Supervisors the importance of taking legal and economic differences into account while applying models the problem of local protectionism especially in developing countries the dismantling of trade barriers in the reinsurance industry global harmonization of reinsurance regulation the role of reinsurance intermediaries finite risk reinsurance insurance linked securities The author's concluding chapter presents an essential legal infrastructure that allows for efficiency security and individual market characteristics Professor Wang then applies this framework to the Taiwanese insurance market demonstrating convincingly how his proposed regime can solve specific problems while respecting Taiwan's distinct market environment As a meticulously considered appraisal of and solution to a world problem that is growing quickly and uncontrollably Reinsurance Regulation will be of immense value to lawyers professors academics and officials who deal with any facet of economic law **The Financial Services**

Pricing in General Insurance Pietro Parodi,2014-10-15 Based on the syllabus of the actuarial industry course on

general insurance pricing with additional material inspired by the author's own experience as a practitioner and lecturer. Pricing in General Insurance presents pricing as a formalised process that starts with collecting information about a particular policyholder or risk and ends with a commercially informed rate. The main strength of this approach is that it imposes a reasonably linear narrative on the material and allows the reader to see pricing as a story and go back to the big picture at any time putting things into context. Written with both the student and the practicing actuary in mind, this pragmatic textbook and professional reference complements the standard pricing methods with a description of techniques devised for pricing specific products e.g. non proportional reinsurance and property insurance. Discusses methods applied in personal lines when there is a large amount of data and policyholders can be charged depending on many rating factors. Addresses related topics such as how to measure uncertainty, incorporate external information, model dependency and optimize the insurance structure. Provides case studies, worked out examples, exercises inspired by past exam questions and step by step methods for dealing concretely with specific situations. Pricing in General Insurance delivers a practical introduction to all aspects of general insurance pricing covering data preparation, frequency analysis, severity analysis, Monte Carlo simulation for the calculation of aggregate losses, burning cost analysis and more.
