Sustainable Transportation in Natural and Protected Areas Francesco Orsi,2015-07-16 Protected areas are at the centre of nature based tourism which is increasingly popular across the world As visitor numbers increase so does awareness of the harmful effects that large crowds may have on both natural resources and individuals recreational experience This volume considers the challenge of transportation to and within natural and protected areas the improvement of which has already been recognised as having great potential for mitigating the environmental impacts of ecotourism While several books have focused considerable attention to the management of protected areas in general little has been said about the specific issue of sustainable transport an emerging trend that is already reshaping visitation patterns in natural settings This book provides current knowledge on issues associated with the transportation of visitors in natural and protected areas and a comprehensive overview of the technical and strategic options available to tackle these issues It approaches the subject via three main topics preferences or the visitors attitudes towards transportation practices where current approaches are assessed through examples and case studies of successful experiences and methodologies from around the world and policies where suggestions and recommendations are put forward for both local scale strategies and broad scale regulatory action with global relevance Contributors include academics in the field of natural resource management and tourism with extensive experience in protected area management and active partnerships with natural park administrations

Transportation Decision Making Kumares C. Sinha,Samuel Labi,2011-09-09 This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming which can help transportation professionals to optimize their investment choices The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation Topics covered include Developing performance measures for evaluation estimating travel demand and costing transportation projects Performing an economic efficiency evaluation that accounts for such factors as travel time safety and vehicle operating costs Evaluating a project's impact on economic development and land use as well as its impact on society and culture Assessing a project's environmental impact including air quality noise ecology water resources and aesthetics

Evaluating alternative projects on the basis of multiple performance criteria Programming transportation investments so that resources can be optimally allocated to meet facility specific and system wide goals Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment Relevant legislation is discussed and available software for performing evaluations is presented At the end of each chapter readers are provided resources for detailed investigation of particular topics These include Internet sites and publications of international and domestic agencies and research institutions The authors also provide a companion Web site that offers updates data for analysis and case histories of project evaluation and decision making Given that billions of dollars are spent each year on transportation systems in the United States alone and that there is a need for thorough and rational evaluation and decision making for cost effective system preservation and improvement this text should be on the desks of all transportation planners engineers and educators With exercises in every chapter this text is an ideal coursebook for the subject of transportation systems analysis and evaluation **New**

Transportation Research Progress Filip Gustavsson, 2008 This book deals with new research in the fields of passenger and freight transportation modes policy analysis formulation and evaluation planning interaction with the political socioeconomic and physical environment design management and evaluation of transportation systems **Advances in**

Communications-Based Train Control Systems F. Richard Yu, 2015-11-05 With rapid population explosion improving rail transit speed and capacity is strongly desirable around the world Communication based train control CBTC is an automated train control system using high capacity bidirectional train ground communications to ensure the safe operation of rail vehicles This book presents the latest advances in CBTC Regulation of Weights, Lengths, and Widths of Commercial Motor Vehicles Transportation Research Board, 2005-07-14 TRB Special Report 267 Regulation of Weights Lengths and Widths of Commercial Motor Vehicles recommends the creation of an independent public organization to evaluate the effects of truck traffic pilot studies of new truck designs and a change in federal law authorizing states to issue permits for operation of larger trucks on the Interstates In 1991 Congress placed a freeze on maximum truck weights and dimensions Some safety groups were protesting against the safety implications of increased truck size and weight and the railroads were objecting to the introduction of vehicles they deemed to have an unfair advantage Railroads unlike trucking firms must pay for the capital costs of their infrastructure The railroads contend that large trucks do not pay sufficient taxes to compensate for the highway damage they cause and the environmental costs they generate Although Congress apparently hoped it had placed a cap on maximum truck dimensions in 1991 such has not proven to be the case Carriers operating under specific conditions have been able to seek and obtain special exceptions from the federal freeze by appealing directly to Congress without any formal review of the possible consequences thereby encouraging additional firms to seek similar exceptions In the Transportation Equity Act for the 21st Century Congress requested a TRB study to review federal policies on commercial vehicle dimensions The committee that undertook the study that resulted in Special Report 267 found that regulatory analyses of the benefits

and costs of changes in truck dimensions are hampered by a lack of information Regulatory decisions on such matters will always entail a degree of risk and uncertainty but the degree of uncertainty surrounding truck issues is unusually high and unnecessary The committee concluded that the uncertainty could be alleviated if procedures were established for carrying out a program of basic and applied research and if evaluation and monitoring were permanent components of the administration of trucking regulations The committee recommended immediate changes in federal regulations that would allow for a federally supervised permit program The program would permit the operation of vehicles heavier than would normally be allowed provided that the changes applied only to vehicles with a maximum weight of 90 000 pounds double trailer configurations with each trailer up to 33 feet and an overall weight limit governed by the federal bridge formula Moreover enforcement of trucks operating under such a program should be strengthened and the permits should require that users pay the costs they occasion States should be free to choose whether to participate in the permit program Those that elected to do so would be required to have in place a program of bridge management safety monitoring enforcement and cost recovery overseen by the federal government The fundamental problem involved in evaluating proposals for changes in truck dimensions is that their effects can often only be estimated or modeled The data available for estimating safety consequences in particular are inadequate and probably always will be Thus the committee that conducted this study concluded that the resulting analyses usually involve a high degree of uncertainty What is needed is some way to evaluate potential changes through limited and carefully controlled trials much as proposed new drugs are tested before being allowed in widespread use The committee recommended that a new independent entity be created to work with private industry in evaluating new concepts and recommending changes to regulatory agencies Limited pilot tests would be required which would need to be carefully designed to avoid undue risks and ensure proper evaluation Special vehicles could be allowed to operate under carefully controlled circumstances just as oversize and overweight vehicles are allowed to operate under special permits in many states Changes in federal laws and regulations would be required to allow states to issue such permits on an expanded network of highways under the condition that a rigorous program of monitoring and evaluation be instituted Special Report 269 Summary

Market-Based Governance John D. Donahue, Joseph S. Nye, 2004-05-26 A Brookings Institution Press and Visions of Governance for the 21st Century publication The latest in a series exploring twenty first century governance this new volume examines the use of market means to pursue public goals Market based governance includes both the delegation of traditionally governmental functions to private players and the importation into government of market style management approaches and mechanisms of accountability The contributors all from Harvard University assess market based governance from four perspectives The demand side deals with new revised or newly important forms of interaction between government and the market where the public sector is the customer Chapters in this section include Steve Kelman on federal procurement reform Karen Eggleston and Richard Zeckhauser on contracting for health care and Peter Frumkin The supply

side section deals with unsettled questions about government's role as a provider rather than a purchaser within the market system Contributors include Georges de Menil Frederick Schauer and Virginia Wise A third section explores experiments with market based arrangements for orchestrating accountability outside government by altering the incentives that operate inside market institutions Chapters include Robert Stavins on market based environmental policy Archon Fung on social markets and Cary Coglianese and David Lazer The final section examines both the upside and the downside of the market based approach to improving governance Contributors include Elaine Kamarck John D Donahue Mark Moore and Robert Behn An introduction by John D Donahue frames market based governance as an effort to engineer into public work some of the intensive accountability that characterizes markets without surrendering the extensive accountability of conventional government A preface by Joseph S Nye Jr sets the book in the context of a larger inquiry into the future of governance

Advanced Practices in Travel Forecasting Rick Donnelly, 2010 TRB's National Cooperative Highway Research Program NCHRP Synthesis 406 Advanced Practices in Travel Forecasting explores the use of travel modeling and forecasting tools that could represent a significant advance over the current state of practice The report examines five types of models activity based demand dynamic network land use freight and statewide *Production and Cost Functions and Their Application to the Port Sector* Lourdes Trujillo, Sergio Jara-Diaz, 2003 **Empirical Studies in Applied Economics** Jeffrey A. Dubin, 2012-12-06 Empirical Studies In Applied Economics presents nine previously unpublished analyses in monograph form In this work the topics are presented so that each chapter stands on its own The emphasis is on the applications but attention is also given to the econometric and statistical issues for advanced readers Econometric methods include multivariate regression analysis limited dependent variable analysis and other maximum likelihood techniques The empirical topics include the measurement of competition and market power in natural gas transportation markets and in the pharmaceutical market for chemotherapy drugs Additional topics include an empirical analysis of NFL football demand the accuracy of an econometric model for mail demand and the allocation of police services in rural Alaska Other chapters consider the valuation of technology patents and the determination of patent scope duration and reasonable royalty and the reaction of financial markets to health scares in the fast food industry Finally two chapters are devoted to the theory and testing of synergistic health effects from the combined exposure to asbestos and cigarette smoking
