Magnificent Mistakes in Mathematics Alfred S. Posamentier, Ingmar Lehmann, 2013-08-13 Two veteran math educators demonstrate how some magnificent mistakes had profound consequences for our understanding of mathematics key concepts In the nineteenth century English mathematician William Shanks spent fifteen years calculating the value of pi setting a record for the number of decimal places Later his calculation was reproduced using large wooden numerals to decorate the cupola of a hall in the Palais de la D couverte in Paris However in 1946 with the aid of a mechanical desk calculator that ran for seventy hours it was discovered that there was a mistake in the 528th decimal place Today supercomputers have determined the value of pi to trillions of decimal places This is just one of the amusing and intriguing stories about mistakes in mathematics in this layperson's guide to mathematical principles In another example the authors show that when we prove that every triangle is isosceles we are violating a concept not even known to Euclid that of betweenness And if we disregard the time honored Pythagorean theorem this is a misuse of the concept of infinity Even using correct procedures can sometimes lead to absurd but enlightening results Requiring no more than high school level math competency this playful excursion through the nuances of math will give you a better grasp of this fundamental all important science

The Shape of the Past Gordon Graham,1997 Can human history as a whole be interpreted in any meaningful way Has there been real progress between stone age and space age Does history repeat itself Is there evidence of divine providence Questions such as these have fascinated thinkers and some of the greatest philosophers notably Kant and Hegel have turned their minds to philosophical history As a branch of philosophy however it has received little attention in the analytical tradition This pioneering work aims to bring the methods of analytical philosophy to the critical examination of some of these questions In addition to Hegel and Kant the discussion ranges over the writings of Augustine Machiavelli and Alasdair MacIntyre The ideas of historical progress secularization and the decline of religion cultural cycles historical rupture and God in history are all subjected to careful analysis Gordon Graham argues that although unfashionable the claim that history is the story of progress under the guidance of providence is one of the most plausible accounts of the shape of the past
