Shaping Space A Polyhedral Approach:

Shaping Space Marjorie Senechal, George M. Fleck, 1988 *Shaping Space* Marjorie Senechal, 2013-03-22 This second edition is based off of the very popular *Shaping Space A Polyhedral Approach* first published twenty years ago The book is expanded and updated to include new developments including the revolutions in visualization and model making that the computer has wrought *Shaping Space* is an exuberant richly illustrated interdisciplinary guide to three dimensional forms focusing on the suprisingly diverse world of polyhedra Geometry comes alive in *Shaping Space* as a remarkable range of geometric ideas is explored and its centrality in our culture is persuasively demonstrated The book is addressed to designers artists architects engineers chemists computer scientists mathematicians bioscientists crystallographers earth scientists and teachers at all levels in short to all scholars and educators interested in and working with two and three dimensional structures and patterns **Learning and Geometry: Computational Approaches** David Kueker, Carl Smith, 2012-12-06

The field of computational learning theory arose out of the desire to formally understand the process of learning As potential applications to artificial intelligence became apparent the new field grew rapidly The learning of geometric objects became a natural area of study The possibility of using learning techniques to compensate for unsolvability provided an attraction for individuals with an immediate need to solve such difficult problems Researchers at the Center for Night Vision were interested in solving the problem of interpreting data produced by a variety of sensors Current vision techniques which have a strong geometric component can be used to extract features However these techniques fall short of useful recognition of the sensed objects One potential solution is to incorporate learning techniques into the geometric manipulation of sensor data As a first step toward realizing such a solution the Systems Research Center at the University of Maryland in conjunction with the Center for Night Vision hosted a Workshop on Learning and Geometry in January of 1991 Scholars in both fields came together to learn about each others field and to look for common ground with the ultimate goal of providing a new model of learning from geometrical examples that would be useful in computer vision The papers in the volume are a partial record of that meeting **Handbook of Convex Geometry** Bozzano G Luisa, 2014-06-28 *Handbook of Convex Geometry* Volume B offers a survey of convex geometry and its many ramifications and connections with other fields of mathematics including convexity lattices crystallography and convex functions The selection first offers information on the geometry of numbers lattice points and packing and covering with convex sets Discussions focus on packing in non Euclidean spaces problems in the Euclidean plane general convex bodies computational complexity of lattice point problem centrally symmetric convex bodies reduction theory and lattices and the space of lattices The text then examines finite packing and covering and tilings including plane tilings monohedral tilings bin packing and sausage problems The manuscript takes a look at valuations and dissections geometric crystallography convexity and differential geometry and convex functions Topics include differentiability inequalities uniqueness theorems for convex hypersurfaces mixed discriminants and mixed volumes

differential geometric characterization of convexity reduction of quadratic forms and finite groups of symmetry operations
The selection is a dependable source of data for mathematicians and researchers interested in convex geometry
