Shaping National Responses To Climate Change A Postrio Policy Guide:

Emissions Trading for Climate Policy Bernd Hansjürgens, 2005-07-28 The 1997 Kyoto Conference introduced emissions trading as a policy instrument for climate protection Bringing together scholars in the fields of economics political science and law this book which was originally published in 2005 provides a description analysis and evaluation of different aspects of emissions trading as an instrument to control greenhouse gases The authors analyse theoretical aspects of regulatory instruments for climate policy provide an overview of US experience with market based instruments draw lessons from trading schemes for the control of greenhouse gases and discuss options for emissions trading in climate policy They also highlight the background of climate policy and instrument choice in the US and Europe and the foundation of systems in Europe particularly the EU s directive for a CO2 emissions trading system

Shaping National Responses to Climate Change Henry Lee, 1995 Explores methods of designing implementing and gaining political support for strategies and policies to reduce greenhouse gases Assesses the economic policy and management trade offs

Handbook of Law and Economics A. Mitchell Polinsky, Steven Shavell, 2007-11-07 Law can be viewed as a body of rules and legal sanctions that channel behavior in socially desirable directions for example by encouraging individuals to take proper precautions to prevent accidents or by discouraging competitors from colluding to raise prices The incentives created by the legal system are thus a natural subject of study by economists Moreover given the importance of law to the welfare of societies the economic analysis of law merits prominent treatment as a subdiscipline of economics Our hope is that this two volume Handbook will foster the study of the legal system by economists The two volumes form a comprehensive and accessible survey of the current state of the field Chapters prepared by leading specialists of the area Summarizes received results as well as new developments

Handbook of Environmental Economics Karl-Goran Maler, Jeffrey R. Vincent, 2003-05-20 The Handbook of Environmental Economics focuses on the economics of environmental externalities and environmental public goods Volume I examines environmental degradation and policy responses from a microeconomic institutional standpoint Its perspective is dynamic including a consideration of the dynamics of natural systems and global with attention paid to issues in both rich and poor nations In addition to chapters on well established topics such as the theory and practice of pollution regulation it includes chapters on new areas of environmental economics research related to common property management regimes population and poverty mechanism design political economy of regulation experimental evaluations of policy instruments and technological change

Public Policies for Environmental Protection Paul Portney, Robert N. Stavins, 2010-10-28 The first edition of Public Policies for Environmental Protection contributed significantly to the incorporation of economic analysis in the study of environmental policy Fully revised to account for changes in the institutional legal and regulatory framework of environmental policy the second edition features updated chapters on the EPA and federal regulation air and water pollution policy and hazardous and toxic substances It includes entirely new

chapters on market based environmental policies global climate change solid waste and for the first time coverage of the Safe Drinking Water Act Portney Stavins and their contributors provide an invaluable resource for researchers policymakers industry professionals and journalists anyone who needs up to date information on U S environmental policy With their careful explanation of policy alternatives the authors provide an ideal book for students in courses about environmental economics or environmental politics

Improving Compliance with International Environmental Law Jacob Werksman, James Cameron, Peter Roderick, 2014-01-14 Measures for regulating the behaviour of nation states in relation to the global environment have increasingly taken the form of international treaties and conventions Many have argued that this has proved to be an ineffective way of halting unsustainable development for the provisions of these agreements are either too weak or are flouted regularly by the parties concerned This volume seeks to address the crucial question of how compliance with these agreements could be encouraged effectively without damaging the fragile political consensus that is emerging on environmental issues With extensive use of case studies Improving Compliance will make stimulating reading for all students and researchers working in this area as well as for anyone concerned about the effectiveness of international environmental measures

Climate Change 2001: Mitigation Intergovernmental Panel on Climate Change. Working Group III., 2001-07-12 IPCC assessment of the scientific technical environmental economic and social aspects of the mitigation of climate change

The Politics of Carbon Markets Benjamin Stephan, Richard Lane, 2014-08-27 The carbon markets are in the middle of a fundamental crisis a crisis marked by collapsing prices fleeing actors and ever increasing greenhouse gas levels Yet carbon trading remains at the heart of global attempts to respond to climate change Not only this but markets continue to proliferate particularly in the Global South The Politics of Carbon Markets helps to make sense of this paradox and brings two urgently needed insights to the analysis of carbon markets First the markets must be understood in relation to the politics involved in their development maintenance and opposition Second this politics is multiform and pervasive Implementation of new techniques and measuring tools policy development and contestation and the structuring context of institutional settings and macro social forces all involve a variety of political actors and create new forms of political agency The contributions study the total extent of the carbon markets from their prehistory to their contemporary expansion and wider impacts This wide ranging political perspective on the carbon markets is invaluable to those studying and interested in ecological markets climate change governance and environmental politics

Moving to Markets in Environmental Regulation Jody Freeman, Charles D. Kolstad, 2007 Publisher description

Environmental Commodities Markets and Emissions Trading Blas Luis Pérez Henríquez, 2013-03-05 Market based solutions to environmental problems offer great promise but require complex public policies that take into account the many institutional factors necessary for the market to work and that guard against the social forces that can derail good public policies Using insights about markets from the new institutional economics this book sheds light on the institutional history of the emissions

trading concept as it has evolved across different contexts It makes accessible the policy design and practical implementation aspects of a key tool for fighting climate change emissions trading systems ETS for environmental control Blas Luis P rez Henr quez analyzes past market based environmental programs to extract lessons for the future of ETS He follows the development of the emissions trading concept as it evolved in the United States and was later applied in the multinational European Emissions Trading System and in sub national programs in the United States such as the Regional Greenhouse Gas Initiative RGGI and California s ETS This ex post evaluation of an ETS as it evolves in real time in the real world provides a valuable supplement to what is already known from theoretical arguments and simulation studies about the advantages and disadvantages of the market strategy Political cycles and political debate over the use of markets for environmental control make any form of climate policy extremely contentious P rez Henr quez argues that despite ideological disagreements the ETS approach or more popularly cap and trade policy design remains the best hope for a cost effective policy to reduce GHG emissions around the world

Climate Change 1995: Economic and Social Dimensions of Climate Change Hoesong Yi, Intergovernmental Panel on Climate Change. Working Group III., 1996-06-27 The consequences of climate change for society are analysed in this landmark assessment from the IPCC This book assesses the available knowledge on the many issues that society has to face including the international decision making framework applicability to climate change of techniques for assessing costs and benefits the significant social costs of projected climate change and the economic assessment of policy instruments to combat climate change nationally and internationally Some important conclusions of this Second Assessment Report indicate that 10 to 30% of greenhouse gas emissions in most countries can be reduced at negative or zero cost no regrets measures Also the literature indicates that climate change will cause aggregate net damage which provides an economic rationale for going beyond no regrets measures It also indicates that a portfolio of mitigation adaptation and research measures is a sound strategy for addressing climate change given the remaining uncertainties This report speaks directly to the issues that are faced by the many countries committed to limit emissions of greenhouse gases by the year 2000 and currently negotiating actions to be taken beyond that date Will be of great value to the international community of policymakers interested in the consequences of climate change as well as to economists social and natural scientists

Shaping National Responses to Climate Change Henry Lee, 1995 Explores methods of designing implementing and gaining political support for strategies and policies to reduce greenhouse gases Assesses the economic policy and management trade offs Keeping International Commitments Eleonore Kokotsis, 2014-04-08 This study is the first to offer explanations for compliance with G7 commitments by identifying the patterns explaining the causes and exploring the processes of this compliance from 1988 1995 It provides the only systematic review of the G7 s compliance record in the post Cold War globalizing system of the 1990s and in regard to important environment and development commitments that have often dominated the Summit s agenda during this third cycle of summitry It draws on explanatory

factors for Summit compliance from three bodies of international relations theory including regime theory concert theory and the recent extension of regime theory to embrace the effects of domestic political institutions **International**

Environmental Law-making and Diplomacy Tuomas Kuokkanen, Ed Couzens, Tuula Honkonen, Melissa Lewis, 2016-01-29
Bringing together contributions from diplomats UN agency officials lawyers and academics this book provides insight into the evolution of international environmental law diplomacy and negotiating techniques Based on first hand experiences and extensive research the chapters offer a blend of practice and theory history and analysis presenting a range of historical episodes and nuances and drawing lessons for future improvements to the processes of law making and diplomacy The book represents a synthesis of the most important messages to emerge from the annual course on Multilateral Environmental Agreements delivered to diplomats and negotiators from around the world for the last decade by the University of Eastern Finland and the United Nations Environment Programme The book will be of interest as a guide for negotiators and as a supplementary textbook and a reference volume for a wide range of students of law and environmental issues

Environmental Health Perspectives , 1993 *International Relations and Global Climate Change* Urs Luterbacher, Detlef F. Sprinz, 2001-10-26 This book surveys current conceptual theoretical and methodological approaches to global climate change and international relations Although it focuses on the role of states it also examines the role of nonstate actors and international organizations whenever state centric explanations are insufficient The book begins with a discussion of environmental constraints on human activities the environmental consequences of human activities and the history of global climate change cooperation It then moves to an analysis of the global climate regime from various conceptual and theoretical perspectives These include realism and neorealism historical materialism neoliberal institutionalism and regime theory and epistemic community and cognitive approaches Stressing the role of nonstate actors the book looks at the importance of the domestic international relationship in negotiations on climate change It then looks at game theoretical and simulation approaches to the politics of global climate change It emphasizes questions of equity and the legal difficulties of implementing the UN Framework Convention on Climate Change and the Kyoto Protocol It concludes with a discussion of global climate change and other aspects of international relations including other global environmental accords and world trade The book also contains Internet references to major relevant documents

Environmental Economics and Public Policy Robert N. Stavins, 2000 Robert N Stavins has emerged as one of the most influential voices in environmental economics over the last decade and a half These 23 essays on environmental economics and policy written by Professor Stavins and his co authors over the period 1988 1999 originally appeared in a diverse set of leading scholarly periodicals and are here collected for the first time The book is divided into seven parts overview benefits and costs of environmental regulation normative analysis of policy instruments positive analysis of policy instruments environmental technology innovation and diffusion causes and consequences of land use changes and global climate policy The book begins

with an introductory essay in which Stavins reflects on the professional path that led to his research and writing and identifies common themes that emerge from this period of research. Students, scholars, practitioners and policymakers will find this volume a valuable and very useful addition to their collection. **Economics of the Environment** Robert N. Stavins, 2019. *Economics of the Environment* Seventh Edition is a compendium of the best most timely articles by a dream team of environmental economists together with an original introductory chapter by the editor. Now in its seventh edition, *Economics of the Environment* serves as a valuable supplement to environmental economics text books and as a stand alone reference book of key up to date readings from the field. Edited by Robert N. Stavins, the book covers the core areas of environmental economics courses as taught around the world and the included authors are the top scholars in the field. Overall, more than half of the chapters are new to this edition while the rest have remained seminal works.

Methodological and Technological Issues in Technology Transfer Bert Metz, 2000-10-05. This IPCC Special Report provides a state of the art overview of how to achieve and enhance technology transfer to respond to global climate change.

The Implementation of the Paris Agreement on Climate Change Vesselin Popovski, 2018-10-03. In December 2015, 196 parties to the United Nations Framework Convention on Climate Change (UNFCCC) adopted the Paris Agreement, seen as a decisive landmark for global action to stop human induced climate change. The Paris Agreement will replace the 1997 Kyoto Protocol which expires in 2020 and it creates legally binding obligations on the parties based on their own bottom up voluntary commitments to implement Nationally Determined Contributions (NDCs). The codification of the climate change regime has advanced well but the implementation of it remains uncertain. This book focuses on the implementation prospects of the Agreement which is a challenge for all and will require a fully comprehensive burden sharing framework. Parties need to meet their own NDCs but also to finance and transfer technology to others who do not have enough. How equity based and facilitative the process will be is of crucial importance. The volume examines a broad range of issues including the lessons that can be learnt from the implementation of previous environmental legal regimes, climate policies at national and sub national levels and whether the implementation mechanisms in the Paris Agreement are likely to be sufficient. Written by leading experts and practitioners, the book diagnoses the gaps and lays the ground for future exploration of implementation options. This collection will be of interest to policy makers, academics, practitioners, students and researchers focusing on climate change governance.
