Bibliography of Agriculture ,1990 Ethics of Scientific Research Kristin Shrader-Frechette,2000-01-01 Challenging long held theories of scientific rationality and remoteness Kristin Shrader Frechette argues that research cannot be value free Rather any research will raise important moral issues for those involved issues not only of truthfulness but of risk to research subjects third parties and the general public *Emotion* , Knowledge and Ignorance Folke Dovring,1998-03-25 Dovring explores the limits of science as causes of ignorance Some topics examined in these essays are problems with our ways of knowing and the impact of emotion on objectivity He argues that reality consists of designs of things and processes While most designs we might think of cannot exist those that can exist add up to a tool box of creation which contains the

detailed laws of nature many of them synergisms Reality must conform to this web of necessities hence the danger of unchecked virtual reality These lines of thought are then applied to evolution as creation and history In a final essay Dovring explores topics upon which science should concentrate This book will be of interest to scientists as well as the lay public interested in the theory of science and questions of truth and faith [Hunting Down Social Darwinism](#) Stuart K. Hayashi,2015-02-17 Hunting Down Social Darwinism is the third and final installment in the trilogy The Nature of Liberty The trilogy gives a secular ethical defense of laissez faire capitalism inspired by Ayn Rand s ideas The trilogy s first book The Freedom of Peaceful Action provided the philosophic theory behind the ethics of a free enterprise system based on the individual rights to life liberty and private property which John Locke described The second installment Life in the Market Ecosystem explained how free enterprise functions much as a natural ecosystem wherein behavioral norms develop bottom up from repeat interactions among individual participants in the economy As such defenses of free enterprise are frequently criticized as social Darwinism however this third and final installment of the trilogy asks the question What is social Darwinism The book embarks on a hunt for the term s meaning explores social Darwinism s beginnings and examines whether it is fair to describe such nineteenth century free market advocates as Herbert Spencer and William Graham Sumner as social Darwinists It then addresses the accusation that the free market Darwinism commonly ascribed to Spencer and Sumner rationalized bigotry and founded the pseudoscience of eugenics In the process the book refutes various myths about the topic popularized by such scholars as Richard Hofstadter and John Kenneth Galbraith The extent to which the popular narratives about social Darwinism prove to be inaccurate holds enormous ramifications for current controversies It has implications for debates over the ethical appropriateness of reducing taxpayer spending on social welfare programs and also sheds new light on the pros and cons of attempts to apply biological evolutionary theory to the study of human social institutions Additionally discussed is the manner in which various prominent figures in economics evolutionary psychology and Complexity Theory have grown famous for advancing ideas which Spencer and Sumner originated even as such figures simultaneously downplay the importance of Spencer and Sumner to their field Following the hunt for social Darwinism this work sums up the trilogy with some final thoughts on the importance that liberty holds for every effort to live life to the fullest *Gaither's Dictionary of Scientific Quotations* Carl C. reference source of science quotations for all audiences The new edition adds greater depth to the number of quotations in the various thematic arrangements and also provides new thematic categories *The Diversity of Life* Edward O. Wilson,1992 View a collection of videos on Professor Wilson entitled On the Relation of Science and the Humanities In the Amazon Basin the greatest violence sometimes begins as a flicker of light beyond the horizon There in the perfect bowl of the night sky untouched by light from any human source a thunderstorm sends its premonitory signal and begins a slow journey to the observer who thinks the world is about to change Watching from the edge of the Brazilian rain forest witness to the sort of violence nature visits upon its creatures Edward O Wilson reflects on the crucible of evolution and so begins his remarkable account of how the living world became diverse and how humans are destroying that diversity Wilson internationally regarded as the dean of biodiversity studies conducts us on a tour through time traces the processes that create new species in bursts of adaptive radiation and points out the cataclysmic events that have disrupted evolution and diminished global diversity over the past 600 million years The five enormous natural blows to the planet such as meteorite strikes and climatic changes required 10 to 100 million years of evolutionary repair The sixth great spasm of extinction on earth caused this time entirely by humans may be the one that breaks the crucible of life Wilson identifies this crisis in countless ecosystems around the globe coral reefs grasslands rain forests and other natural habitats Drawing on a variety of examples such as the decline of bird populations in the United States the extinction of many species of freshwater fish in Africa and Asia and the rapid disappearance of flora and fauna as the rain forests are cut down he poignantly describes the death throes of the living world s diversity projected to decline as much as 20 percent by the year 2020 All evidence marshaled here resonates through Wilson s tightly reasoned call for a spirit of stewardship over the world s biological wealth He makes a plea for specific actions that will enhance rather than diminish not just diversity but the quality of life on earth Cutting through the tangle of environmental issues that often obscure the real concern Wilson maintains that the era of confrontation between forces for the preservation of nature and those for economic development is over he convincingly drives home the point that both aims can and must be integrated Unparalleled in its range and depth Wilson s masterwork is essential reading for those who care about preserving the world biological variety and ensuring our planet s health
