

# Shared vs. Individual Perceptions

- Climate is the shared perceptions regarding what is rewarded, expected, valued, and reinforced in the workplace
- Not everyone will necessarily have the same perceptions.
  - The extent to which those views are shared reflects the strength (or intensity) of the climate.

phenomenologists were concerned with the question of the unity of experience and sought to identify the conditions of possibility for having a perception which they conceive not as a mere sensible experience of the outer world but as a continuous and meaningful experience of reality Unlike Kant however neither phenomenologist immediately identified these conditions with cognition or epistemic criteria For both phenomenologists perception has its own standards its own conditions of possibility Perception obtains when it unfolds concordantly or coherently and when the perceptual progression corresponds to or is in harmony with one's goal or interest perception can also be said to be optimal From the phenomenological point of view concordance *Einstimmigkeit* and optimality *Optimalität* are the two basic perceptual norms governing over perceptual experience and much of the book is devoted to clarifying their meaning and to address the philosophical consequences that follow from this insight
