A Pocket Guide to Sharks of the World David A. Ebert, Marc Dando, Sarah Fowler, 2021-08-24 Sharks are some of the most misunderstood animals on the planet We still have a lot to learn about these fascinating creatures which are more seriously threatened with extinction and in greater need of conservation and management than any other major group of vertebrates A Pocket Guide to Sharks of the World is the only field guide to identify illustrate and describe every known shark species Its compact format makes it handy for many situations including recognizing living species fishery catches or parts sold at markets This expanded second edition presents lavish images details on newly discovered species and updated text throughout The book contains useful sections on identifying shark teeth and the shark fins most commonly encountered in the fin trade and takes a look at shark biology ecology and conservation A Pocket Guide to Sharks of the World will be an essential resource and definitive reference for years to come Back cover World Swordfish Fisheries: Latin America. Pt. A. South America. Section 1. Pacific. Segment A. Colombia, Ecuador and Peru William B. Folsom, Dennis M. Weidner, Mark Wildman, Julio A. Serrano, Karyl Brewster-Geisz, Dale M. Woodley, Rebecca L. Brudek, Food and Agriculture Organization of the United Nations, 1999 The status of shark species is reviewed based on the available data A review of the history of shark fisheries demonstrates that intensive shark fisheries are not sustainable Numerous problems are encountered in assessing shark populations a general lack of biological and fishery data lack of suitable models and lack of validated age estimates Sharks have an unusual combination of biological characteristics slow growth and delayed maturation long reproductive cycles low fecundity and long life spans These characteristics make them vulnerable to overfishing A preliminary evaluation of the status of shark species is made on the basis of historical data the reproductive potential of each species and the level of exploitation of the species In this document exploited shark species are classified numerically according to their vulnerability The majority of these species are listed as Category 1 indicating that there are not sufficient data to assess the species Available data indicate that sharks are very vulnerable and are threatened by overexploitation in many parts of the world **An Illustrated Pocket Guide to the Sharks of the World** David A. Ebert, Sarah Fowler, Sarah L. Fowler, 2014-06-16 Sharks are probably the most misunderstood animals on the planet We all still have a lot to learn about these fascinating creatures which are sadly more seriously threatened with extinction and in greater need of conservation and management action than any other major group of vertebrates We have produced this guide not just because we and so many other people love sharks It is also because their
