Caribbean and the Gulf of Mexico Jeremy Stafford-Deitsch, 2000 This guide contains useful and easily accessible information on a wide range of topics concerning sharks and their interaction with divers The authors main concern is that sharks should be understood rather than feared and that through our knowledge of sharks will come a deeper appreciation of their nature and desire that they should be conserved rather than hunted to extinction *White Shark Adventures* George J. Smit, 2012-11-27 The Great White shark that is one of the most feared and completely misunderstood creatures in the ocean became part of my 38 years of free diving and spearfishing on the South African and Mozambique coast I had several encounters with this creature and not only the White shark but numerous of the other shark species were encountered during this time Since the White shark fascinated me and although I had some close encounters I never felt that this shark was a man eater but rather a curious creature wanting to inspect the unknown A swimming human kicking with the legs will attract a White shark and most swimmers are bitten on the legs All of this was motivation to start a cage diving operation to introduce the White shark to the many tourists that visit South Africa This book was written to give people an insight into part of my experiences and also better understand the Great White shark The Azores Marine Ecosystem: An Open Window Into North Atlantic Open Ocean and Deep-Sea Environments Telmo Morato, Mónica Almeida Silva, Gui Manuel Machado Menezes, Ricardo Serrão Santos, Pedro Afonso, Tony J. Techera, Natalie Klein, 2014-06-05 The key aim of this book is to explore the global conservation and management of sharks There has been a rapid decline in populations of many shark species while new science has emerged of the critical role they play in marine ecosystems However the authors show that conservation law and policy have been slow to develop with only a small number of iconic species being protected worldwide The increase in fishing impact primarily through shark finning and by catch has led to shark conservation receiving greater international attention in recent years The book explores our current knowledge and status of the law and science in relation to sharks with a particular focus on improving frameworks for their conservation and management Recent trends are analysed including shark finning bans that have been put in place in several countries the widening number of nations establishing shark sanctuaries and the growth of shark based tourism The efficacy of current listing processes for endangered species and fisheries regulations is also examined Tourism is explored as an alternative to fishing and the risks and impacts associated with this industry are analysed Contributors include leading authorities from universities and conservation organizations in North America Europe and Australia A common theme is to emphasise the

importance of collaborative governance between various interest groups and the need for inter disciplinary research and management approaches that are necessary to address the decline in sharks *Animals and Science Education* Michael P. Mueller, Deborah J. Tippins, Arthur J. Stewart, 2017-06-15 This book discusses how we can inspire today's youth to engage in challenging and productive discussions around the past present and future role of animals in science education Animals play a large role in the sciences and science education and yet they remain one of the least visible topics in the educational literature This book is intended to cultivate research topics conversations and dispositions for the ethical use of animals in science and education This book explores the vital role of animals with in science education specimens protected species and other associated issues with regards to the role of animals in science Topics explored include ethical curriculum and pedagogical dimensions involving invertebrates engineering solutions that contribute to ecosystems the experiences of animals under our care aesthetic and contemplative practices alongside science school based ethical dialogue nature study for promoting inquiry and sustainability the challenge of whether animals need to be used for science whatsoever reconceptualizing museum specimens cultivating socioscientific issues and epistemic practice cultural integrity and citizen science the care and nurturance of gender balanced curriculum choices for science education and theoretical conversations around cultivating critical thinking skills and ethical dispositions The diverse authors in this book take on the logic of domination and symbolic violence embodied within the scientific enterprise that has systematically subjugated animals and nature and emboldened the anthropocentric and exploitative expressions for the future role of animals At a time when animals are getting excluded from classrooms too dangerous too many allergies too dirty this book is an important counterpoint Interacting with animals helps students develop empathy learn to care for living things engage with content We need more animals in the science curriculum not less David Sobel Senior Faculty Education Department Antioch University New England *International Wildlife Encyclopedia* Maurice Burton, Robert Burton, 2002 This twenty two volume set presents the appearance and behavior of thousands of species of animals along with species population and prospects for survival in a arranged alphabetically and easy to read format **Sharks in the Arts** Vivienne Westbrook, Shaun Collin, Dean Crawford, Mark Nicholls, 2018-05-11 This book is the most thorough exploration to date of the many ways in which a wild creature has been absorbed reimagined and represented across the ages in all of the major art forms The authors consider not only how the identity of sharks in the natural environment became incorporated into a cultural environment but also how sharks came to be considered the most feared creatures in the open oceans as a consequence of this incorporation Yet sharks are especially important in helping to maintain a balance that is essential to the health of the oceans The book begins with a treatment of the three sharks at the top of global shark attack files from scientific economic and environmental perspectives Subsequent chapters engage with cultural representations of sharks in poetry drama art novels screenplay adaptations and films Through an exploration of the ways in which sharks have been represented in human culture through the centuries this

book alerts the global community to the importance of sharks as a common cultural heritage. It aims to change perceptions of sharks so that they can become more revered than feared. The authors of this book argue that an increased understanding of sharks should lead to the development of better strategies for shark and human interactions. This book will be of great interest to researchers and students of the Environmental Humanities, Cultural History, and the Arts. It is also excellent supplementary reading for courses in Zoology and Marine Science. **The Devouring Dragon** Craig Simons, 2013-03-12 Argues that China's role as an emerging economic power is destroying the environment, citing their status as the largest market for endangered wildlife, top importer of tropical trees, and biggest emitter of greenhouse gases. *Jaws of the New York Beaches* Patricia Heyer, 2025-03-11 In this middle grade adaptation of *Shark Attacks of New York*, author Patricia Heyer dives into the history and lore of shark attacks along New York's coast. Every summer, thousands of people flock to Coney Island, the Rockaway, and all along Long Island's southern coast for some of the most beautiful beaches on the east coast. But some come face to face with much more. **Shark Trouble** Peter Benchley, 2002-06-04 Drawing on more than three decades of experience writing about sharks and other marine animals, the bestselling author of *Jaws* combines high adventure with practical information in a book that is at once a thriller and a valuable guide to being safe in, on, under, and around the sea. Shark attacks on human beings generate a tremendous amount of media coverage. Benchley writes partly because they occur so rarely but mostly, I think, because people are and always have been simultaneously intrigued and terrified by sharks. Sharks come from a wing of the dark castle where our nightmares live, deep water beyond our sight and understanding, and so they stimulate our fears and fantasies and imaginations. Benchley describes the many types of sharks, including the ones that pose a genuine threat to man, what is and isn't known about shark behavior, the odds against an attack, and how to reduce them even further, all reinforced with the lessons he has learned, the mistakes he has made, and the personal perils he has encountered while producing television documentaries, bestselling novels, and articles about the sea and its inhabitants. He tells how to swim safely in the ocean, how to read the tides and currents, what behavior to avoid, and how to survive when danger suddenly strikes. He discusses how to tell children about sharks and the sea, and how to develop in young and old alike a healthy respect for the ocean. As Benchley says, "The ocean is the only alien and potentially hostile environment on the planet into which we tend to venture without thinking about the animals that live there, how they behave, how they support themselves, and how they perceive us." I know of no one who would set off into the jungles of Malaysia armed only with a bathing suit, a tube of suntan cream, and a book, and yet that's precisely how we approach the oceans. No longer. Not after you've read *Shark Trouble*. *Shark* Daniel Abel, Sophie A. Maycock, 2025-03-25 A marvelously illustrated look at the life of the shark. No two species of shark have the same life history, yet these magnificent creatures share many things in common. This one-of-a-kind narrative biography brings together a wide array of species from habitats around the globe, examining the biology, ecology, and behavior of sharks as well as their cultural role in human history. Written by two experienced shark

educators scientists and conservationists *Shark The Illustrated Biography* blends engaging profiles of selected species with captivating illustrations to offer an unparalleled exploration of the life and times of the shark Features a beautiful and informative array of watercolors Tells the biographical story of the shark using the life histories of representative species from birth and early family life to adolescence and the adult years Discusses sharks of all kinds such as Shortfin Makos Sandbar Sharks Spiny Dogfish Great Whites Tiger Sharks Basking Sharks Angel Sharks and Great Hammerheads Covers evolutionary history distinguishing features habitats reproduction and migration Examines the role of sharks in art music literature spirituality and mythology An essential must have reference for shark lovers everywhere *Wild Capital* Barbara K. Jones, 2019-11-11 In *Wild Capital* Barbara Jones demonstrates that looking at nature through the lens of the marketplace is a surprisingly effective approach to protecting the environment Showing that policy makers and developers rarely associate wild places with monetary values Jones argues that nature can and should be viewed as a capital asset like any other in order for environmental preservation to be a competitive alternative to development Jones describes how the ecosystem services model a tool that connects human well being with the services nature provides can play a critical role in assigning species and their habitats measurable values She uses five highly recognizable animal species moose manatees sharks wolves and bald eagles as examples to show how highly valued charismatic fauna can serve as symbolic representations of entire ecosystems at risk Through an emphasis on branding incentives and ecotourism Jones advocates for channeling the social and economic power of these and other faces of nature to inspire greater environmental awareness and stewardship Contending that many people don't realize how fiscally pragmatic environmental initiatives can be Jones is optimistic that by recognizing the costs of habitat destruction and diminished biodiversity we will make better choices regarding conservation and development In doing so we can more readily move toward co existence with nature and a sustainable future
