disease outbreaks in a flock by determining the cause of death Handbook of Milk of Non-Bovine Mammals Young W. Park, George F. W. Haenlein, 2008-02-28 No one can deny the fact that the cow is the primary dairy animal species to provide humans with nutritious dairy foods through its abundance of lacteal secretion. The goat or other minor dairy species will never be able to compete with the cow in terms of the volume of milk production. Yet the contribution of milks from other secondary domesticated dairy species to the survival and well-being of mankind around the world is immense and invaluable. Testament to the importance of non-bovine milk is that more people drink the milk of goats than that of any other single species in the world. In developing and underdeveloped countries the secondary dairy species play a crucial role in supplying the food and nutritional needs of the people in those regions. Due to the unavailability of cow milk and the low consumption of meat the milks of minor species such as goat, buffalo, sheep and camel are critical daily food sources of protein, phosphate and calcium. Furthermore, because of important and inherent hypoallergenic properties, milks of certain species such as goat milk have been recommended as substitutes in diets for those with cow milk allergies. Editors Park and Haenlein have assembled dairy and nutrition experts from around the world to contribute to the Handbook of Milk of Non-Bovine Mammals. Secondary dairy species addressed are the goat, sheep, buffalo, mare, camel, yak, deer, reindeer, sow, llama, alpaca, moose, musk ox, caribou, ass, elk, pinniped, polar bear and human. The book comprehensively covers the most important aspects of milk production including trends and methods of raw milk production in different regions, compositional, nutritional, therapeutic, physico-chemical and microbiological characteristics of the milks, processing technology and types, distribution and consumption of the manufactured products from minor species milks. Of special note is coverage comparing specific human health attributes of milk from the various species including nutritional, allergenic, immunological and cultural factors. Because secondary dairy species have such a significant impact on human well-being and survival in many parts of the world, the Handbook of Milk of Non-Bovine Mammals is an essential reference book of leading edge information for dairy scientists, nutritionists, food chemists, allergy specialists, health professionals and allied professionals. *ILAR News* Institute of Laboratory Animal Resources (U.S.), 1992 *Travels, Explorations and Empires, 1770-1835, Part II Vol 5* Tim Fulford, Peter Kitson, Tim Youngs, 2021-12-16 A collection of work that attempts to reflect the diversity of travel literature from the late 18th and early 19th centuries. This literature often reveals something of the cultural and gender difference of the travellers as well as ideas on colonialism, anthropology and slavery. Handbook of Analysis of Edible Animal By-Products Leo M.L. Nollet, Fidel Toldra, 2011-04-01 Considered high priced delicacies or waste material to be tossed away, the use and value of offal, edible and inedible animal by-products depend entirely on the culture and country in question. The skin, blood, bones, meat trimmings, fatty tissues, horns, hoofs, feet, skull and entrails of butchered animals comprise a wide variety of products including human or pet food or processed materials in animal feed, fertilizer or fuel. Regardless of the final product's destination, it is still necessary to employ the most up-to-date and effective tools to analyze these products for nutritional and sensory quality as

well as safety Providing a full overview of the analytical tools currently available the Handbook of Analysis of Edible Animal By Products examines the role and use of the main techniques and methodologies used worldwide for the analysis of animal by products Divided into four parts this unique handbook covers the chemistry and biochemistry involved in the fundamentals of the field and considers the technological quality nutritional quality and safety required to produce a viable product Beginning with an introduction to the chemical and biochemical compounds of animal by products the book details the use and detection of food grade proteins rendered fats and cholesterol It discusses how to determine oxidation in edible by products measurement of color in these products and the analysis of nutritional aspects such as essential amino acids fatty acids vitamins minerals and trace elements The latter portion of the book deals with safety parameters particularly the analytical tools for the detection of pathogens toxins and chemical toxic compounds usually found in muscle foods Specific chapters highlight the detection of tissues typically found in animal by products such as neuronal tissues non muscle tissues and bone fragments
