Toxicology of the Pancreas Parviz M. Pour, 2005-07-27 The increased incidence of pancreatic cancer in the Western world and its grave prognosis has resulted in an urgency for research in this area Until now the available data on toxicology of the pancreas has been few and fragmentary scattered throughout the literature A benchmark volume Toxicology of the Pancreas pulls together information in this neglected area of toxicological research and highlights fundamental research performed in the last ten years Leaders in the field discuss important structures the detoxification and toxification process at the cellular and sub cellular level the distribution of phase 1 and phase 2 drug metabolizing enzymes and their role in pancreatic disease and the role of diet and toxicants on pancreatic disease The book also covers the role of altered genes in the integrity of the pancreas and explores comparative toxicology in humans and in the lab species used in testing Illustrated with histological electron microscopical and immunohistochemical formats this book provides a comprehensive and novel presentation of biological and toxicological data It stands alone as a reliable resource of information easily accessible to professionals in different disciplines **Report of the ... Avril Woodhead, 2013-03-07 The analysis of intra group correlations between LS and BW at representative intervals yields no consistent support for the hypothesis that lower BW is associated with longer LS Indeed among male Wistar rats and C57BL 6J and A J mice followed since weaning on AL diets the data suggested that relatively higher BW across the adult LS was generally associated with longer life Even when the diet was restricted by EOD or RES regimens this pattern of positive correlations between LS and BW persisted for the C57BL 6J and A J strains when relative ages were analyzed However when BW at absolute ages were correlated with LS support for the positive relationship between BW and LS was not as forthcoming When AL groups were assessed beginning at later ages 10 months the pattern of positive correlations was very evident for the Wistar rats heavier rats tended to live longer This pattern was also evident among AL fed C57BL 6J mice followed since 6 months but was lost in the 10 month group in this strain Among A J mice on AL diets the pattern became somewhat negative when followed at 6 and 10 months of age However among both C57BL 6J and A J mice placed on EOD diets at 6 and 10 months of age the pattern clearly tended toward the positive Long-lived Proteins in Human Aging and Disease Roger J. W. Truscott, 2021-02-12 This authoritative overview on an emerging topic in the molecular life sciences covers all aspects of the aging of long lived proteins It describes the molecular mechanisms of aging on the protein level in particular the most common side chain modifications and includes analytical methods to study protein half life and the accumulation of modifications Finally the impact of protein aging on several age related diseases in humans is dissected and their role in limiting human lifespan is discussed *Encyclopedia of Biomedical Gerontology*, 2019-11-20 *Encyclopedia of Biomedical Gerontology* Three Volume Set presents a wide range of topics ranging from what happens in the body during aging the reasons and mechanisms relating to those age related changes and their clinical psychological and social

modulators and determinants The book covers the biological and medical aspects of gerontology within the general framework of the biological basis of assessing age biological mechanisms of aging age related changes in biological systems human age related diseases the biomedical practicality and impracticality of interventions and finally the ethics of intervention Provides a one stop resource to information written by world leading scholars in the field of biomedical gerontology Fills a critical gap of information in a field that has seen significant progress in the last 10 years The Complete Works of Aristotle Aristotle,2014-09-21 This digital edition combines for the first time both volumes of The Complete Works of Aristotle The Revised Oxford Translation which is universally recognized as the standard English version The Oxford Translation of Aristotle was originally published in twelve volumes between 1912 and 1954 The revised edition contains the substance of the original translation slightly emended in light of recent scholarship three of the original versions have been replaced by new translations and a new and enlarged selection of fragments has been added The aim of the translation remains the same to make the surviving works of Aristotle readily accessible to English speaking readers **The Longevity Imperative** Andrew J. Scott,2024-04-23 SHORTLISTED FOR THE FINANCIAL TIMES AND SCHRODERS BUSINESS BOOK OF THE YEAR A manifesto to guide the longevity revolution David Sinclair for individuals institutions and society to adapt to the reality of living longer lives Thanks to increases in life expectancy we can now expect to live for a long time Most of us would welcome an extra day in the week so why do so many of us view the prospect of additional years with fear and skepticism The reason is simple society is not currently structured to support long lives Rather than thinking in terms of the needs of a rising number of older people we must instead support the young and middle aged to prepare differently for the longer futures they can expect The Longevity Imperative outlines the innovations needed to make the most of these longer lives substantial changes to our health system economy and financial sector as well as in how we manage our careers health finances and relationships Instead of seeing longevity as a problem economist Andrew J Scott challenges us to view it as an opportunity This book charts a course to address the individual social political economic and cultural changes required so that all of us regardless of age can live lives that are not just longer but healthier happier and more productive

Rotifera IX La-Orsri Sanoamuang,Hendrik Segers,Russell J. Shiel,Ramesh D. Gulati,2012-12-06 This volume is a record of the proceedings of the IXth International Rotifer Symposium which was held in Khon Kaen Thailand on January 16 23 2000 The symposium was the first meeting of the international group of rotifer researchers held in Asia The volume contains reviews and research papers dealing with diverse aspects of scientific research related to Rotifera and their ecology Some of the topics addressed are taxonomy and zoogeography ecology phylogeny and evolution physiology biochemistry and population genetics aquaculture and ecotoxicology This book is special because it contains a unique compilation of contemporary rotifer related research and is the eighth of a series of rotifer symposium proceedings published in Developments of Hydrobiology This update of Rotifera studies will be of great interest to invertebrate zoologists

hydrobiologists ecologists and aquaculturists particularly those interested in freshwater habitats *Understanding Ageing* Robin Holliday,1995-01-27 This book presents a completely novel approach to the understanding of ageing which many believe is an unsolved problem in biology It explains why ageing exists in animals and reviews our understanding of it at the biological level This includes a discussion of the origins and evolution of ageing The book is not a review of research on ageing but instead draws on material from a wide range of disciplines including the very extensive biomedical information about age related diseases in humans *Understanding Ageing* argues that much research needs to be done on the cellular and molecular aspects of ageing if the origins of these diseases are to be understood and their prevention made possible This thought provoking book will appeal to all students and researchers who are interested in ageing whether they are working in the clinical or basic research sphere *Handbook of the Biology of Aging* Edward J. Masoro,Steven N. Austad,2010-12-13 *Handbook of the Biology of Aging* Seventh Edition reviews and synthesizes recent findings and discoveries in the field This volume is part of The Handbooks of Aging series which also includes *The Handbook of the Psychology of Aging* and *The Handbook of Aging and the Social Sciences* The book is organized into two parts Part 1 covers basic aging processes It covers concepts relevant to clinical research such as muscle adipose tissue and stem cells It discusses research on how dietary restriction can slow down the aging process and extend life in a wide range of species Part 2 deals with the medical physiology of aging It contains several chapters on the aging of the human brain These chapters deal not only with diseases but also with normal aging changes to cerebral vasculature and myelination as well as the clinical implications of those changes Additional chapters cover how aging affects central features of human health such as insulin secretion pulmonary and cardiac function and the ability to maintain body weight and body temperature The volume is primarily directed at basic researchers who wish to keep abreast of new research outside their own subdiscipline It will also be useful to medical behavioral and social gerontologists who want to learn about the discoveries of basic scientists and clinicians Contains basic aging processes as determined by animal research as well as medical physiology of aging as known in humans Covers hot areas of research like stem cells integrated with longstanding areas of interest in aging like telomeres mitochondrial function etc Edited by one of the fathers of gerontology Masoro and contributors represent top scholars in gerontology **Longevity and healthy aging** Tzvi Dwolatzky,Gil Atzmon,2023-08-03 *Oxford Textbook of Cancer Biology* Francesco Pezzella,Mahvash Tavassoli,David Kerr,2019-05-02 The study of the biology of tumours has grown to become markedly interdisciplinary involving chemists statisticians epidemiologists mathematicians bioinformaticians and computer scientists alongside biologists geneticists and clinicians The *Oxford Textbook of Cancer Biology* brings together the most up to date developments from different branches of research into one coherent volume providing a comprehensive and current account of this rapidly evolving field Structured in eight sections the book starts with a review of the development and biology of multi cellular organisms how they maintain a healthy homeostasis in an individual and a description of the molecular basis of

cancer development The book then illustrates as once cells become neoplastic their signalling network is altered and pathological behaviour follows It explores the changes that cancer cells can induce in nearby normal tissue the new relationship established between them and the stroma and the interaction between the immune system and tumour growth The authors illustrate the contribution provided by high throughput techniques to map cancer at different levels from genomic sequencing to cellular metabolic functions and how information technology with its vast amounts of data is integrated with traditional cell biology to provide a global view of the disease The effect of the different types of treatments on the biology of the neoplastic cells are explored to understand on the one side why some treatments succeed and on the other how they can affect the biology of resistant and recurrent disease The book concludes by summarizing what we know to date about cancer and in what direction our understanding of cancer is moving Edited by leading authorities in the field with an international team of contributors this book is an essential resource for scholars and professionals working in the wide variety of sub disciplines that make up today s cancer research and treatment community It is written not only for consultation but also for easy cover to cover reading
