*Love and Hate* Irenäus Eibl-Eibesfeldt, The author argues that there are specific turning points in evolution Structures and behavioral patterns that evolved in the service of discrete functions sometimes allow for unforeseen new developments as a side effect In retrospect they have proven to be pre adaptations and serve as raw material for natural selection to work upon Love and Hate was intended to complement Konrad Lorenz s book On Aggression by pointing out our motivations to provide nurturing and thus to counteract and correct the widespread but one sided opinion that biologists always present nature as bloody in tooth and claw and intra specific aggression as the prime mover of evolution This simplistic image is nonetheless still with us all the more regrettably because it hampers discussion across scholarly disciplines Eibl Eibesfeldt argues that leaders in individualized groups are chosen for their pro social abilities Those who comfort group members in distress who are able to intervene in quarrels and to protect group members who are attacked those who share those who in brief show abilities to nurture are chosen by the others as leaders rather than those who use their abilities in competitive ways Of course group leaders may need beyond their pro social competence to be gifted as orators war leaders or healers Issues of love and hate are social in origin and hence social in consequence Life has emerged on this planet in a succession of new forms from the simplest algae to man man the one being who reflects upon this creation who seeks to fashion it himself and who in the process may end by destroying it It would indeed be grotesque if the question of the meaning of life were to be solved in this way As the author notes in the preface of this new edition I discuss the phylogenetic origin of our behavior and motivations which provide the basis for our cultural evolution and thus for our humanitarian hopes In language that is clear and accessible throughout arguing forcefully for the innate and preprogrammed dispositions of behavior in higher vertebrates including humans Eibl Eibesfeldt steers a middle course in discussing the development of cultural and ethical norms while insisting on their matrix of biological origins

social competence to be gifted as orators war leaders or healers Issues of love and hate are social in origin and hence social in consequence Life has emerged on this planet in a succession of new forms from the simplest algae to man man the one being who reflects upon this creation who seeks to fashion it himself and who in the process may end by destroying it It would indeed be grotesque if the question of the meaning of life were to be solved in this way In language that is clear and accessible throughout arguing forcefully for the innate and preprogrammed dispositions of behavior in higher vertebrates including humans Eibl Eibesfeldt steers a middle course in discussing the development of cultural and ethical Provided by publisher

**Biology and Ideology from Descartes to Dawkins** Denis R. Alexander, Ronald L. Numbers, 2010-05-15 Over the course of human history the sciences and biology in particular have often been manipulated to cause immense human suffering For example biology has been used to justify eugenic programs forced sterilization human experimentation and death camps all in an attempt to support notions of racial superiority By investigating the past the contributors to Biology and Ideology from Descartes to Dawkins hope to better prepare us to discern ideological abuse of science when it occurs in the future Denis R Alexander and Ronald L Numbers

bring together fourteen experts to examine the varied ways science has been used and abused for nonscientific purposes from the fifteenth century to the present day Featuring an essay on eugenics from Edward J Larson and an examination of the progress of evolution by Michael J Ruse *Biology and Ideology* examines uses both benign and sinister ultimately reminding us that ideological extrapolation continues today An accessible survey this collection will enlighten historians of science their students practicing scientists and anyone interested in the relationship between science and culture

*Evolutionary Intelligence* Rolf W. Frohlich,2009-04 Human nature holds the intelligence of life It provides a psychology that is much stronger more effective and more reliable than the psychology society teaches us This psychology taps into the evolutionary survival experience of our species which occupied most of human history It was the period when the species evolved and our ancestor survived as a hunter and gatherer More than 99% of human history is encoded in the DNA of our genes and lastingly etched into the human psyche Our natural psychology the human psyche is the result of evolutionary adaptation The psyche provides the genetic capacity for behavioral mental and spiritual adaptation It supports the gratification of our needs And it contains the blueprint of human life The book is about human nature and human survival Human nature that is the human psyche has survival value The book introduces a metapsychology that refers to the Jungian archetypes and the survival capabilities inherent in the psyche Like all living organisms and forms of life we possess an innate capacity for survival By awakening this evolutionary intelligence we gain access to the primordial power and wisdom of the archetypal psyche This innate psychology transcends the cultural conditioning that has shaped us all and erects an entirely different reference system making us look at life in a new way We live in a world that reflects human nature and we are well equipped to survive in it Beyond that there is also something in us that resonates with a larger context Our psychological constitution relates us to the outer realities of nature and cosmos It is in this sense that we partake in the evolution of life on this planet and in the larger design of a cosmic universe This primary psyche is shared by all humanity as part of a common biological and psychological history

**Political Questions** Larry Arnhart,2015-08-28 In this enhanced edition Larry Arnhart continues to ask thought provoking questions that illuminate the philosophies of some of the most prominent political thinkers

throughout history This clear well written guide is an ideal supplement to the original texts he recommends at the beginning of each chapter In addition to his analysis of Plato Aristotle Augustine Aquinas Machiavelli Descartes Rousseau Hegel Marx Nietzsche and Rawls the author s well organized and insightful approach provides an even more comprehensive overview than the earlier editions Supplementing the discussion of Leviathan the chapter on Thomas Hobbes covers Behemoth The chapter on John Locke includes his Letter Concerning Toleration as well as the original discussion of Second Treatise of Government A chapter on Adam Smith has been added which discusses Theory of Moral Sentiments and Wealth of Nations Leo Strauss is featured with an examination of Persecution and the Art of Writing and Natural Right and History A final chapter analyzes Steven Pinker s The Better Angels of Our Nature *Human Emotions* Carroll E. Izard, 2013-11-11 In recent years especially the past decade in sharp contrast to preceding decades knowledge in the field of emotions has been steadily increasing This knowledge comes from many different specialties Emotion is a truly interdisciplinary subject Workers in the fields of physiology neurology ethology physiological psychology personality and social psychology clinical psychology and psychiatry medicine nursing social work and the clergy are all directly concerned with emotion Professions such as law and architecture have an obvious concern with emotions as they affect human motives and needs The various branches of art especially the performing arts certainly deal with the emotions especially with the expression of emotions Constantine Stanislavsky the Russian theatrical genius revolutionized modern theater by developing a training method for actors and actresses that emphasized creating genuine emotion on the stage the emotion appropriate to the character and the life situation being depicted Indeed one can hardly think of any human activity that is not related in some way to the field of emotion Since the contributions to the subject of emotions come from so many different disciplines it is difficult to find the important common themes that can yield an understanding of the field as a whole This volume will attempt to make that task easier but I recognize that no one can treat all of the diverse material expertly and in detail My aim will be to represent all important types of contributions and perhaps point the way for further and more intensive study of special topics

**Perception of Self in Emotional Disorder and Psychotherapy** Lorne M. Hartman, Kirk R. Blankstein, 2013-11-11 One s view of self has pervasive and significant effects socially psychologically and even biologically Regardless of theoretical differences most psychotherapists agree that perception of self in one way or another profoundly impacts emotional satisfaction behavioral adaptation and rational thinking Self acceptance has played a major role in almost every major theory of personality Despite its recognized importance over the years only recently has the perception of self received vigorous research attention as a central variable in the development and maintenance of psychological dysfunction and as a mediating mechanism in effecting psychological change Several lines of evidence point to the importance of self perception in emotional disorder and psychotherapy Feelings of inadequacy and unworthiness are frequently cited complaints among persons seeking psychological help People with low self esteem see themselves as helpless and inferior They feel incapable of improving their

situation They fail to evidence the requisite inner resources or coping abilities for tolerating the stress of their life situation The ability to be involved in healthy intimate relationships to engage in successful career performance to experience satisfactory sexual functioning or to maintain effective mood management are all subject to disruption as a result of inconsistent and impaired self appraisal *Indoctrinability, Ideology, and Warfare* Irenäus Eibl-Eibesfeldt, Frank K. Salter, 1998 Violent ethno nationalist conflicts continue to mar the history of the twentieth century yet no satisfactory answer as to why humans are susceptible to indoctrination by ideologies leading to inter group hostility has thus far been found This volume brings together an international team of leading scientists to address this complex issue from disciplines as diverse as anthropology psychology psychobiology sociology philosophy ethology sociology and political science Treating the processes of indoctrination as a biological phenomenon with physiological and psychological aspects these essays explore the answers to this pressing question in humanity s evolutionary past **Ethnic Conflict and Indoctrination** Irenäus Eibl-Eibesfeldt, Frank K. Salter, 1998 Violent ethno nationalist conflicts continue to mar the history of the current century yet no satisfactory answer to the question of why humans are susceptible to indoctrination by ideologies that lead to inter group hostility has so far been found In this volume an international team of leading scientists from many different fields approach this complex issue from a biological perspective treating indoctrinability as a predisposition that has its roots in humanity s evolutionary past *Attachment and Bonding* C. Sue Carter, Lieselotte Ahnert, K. E. Grossmann, Sarah B. Hrdy, Michael E. Lamb, 2015-10-06 Scientists from different disciplines including anthropology psychology psychiatry pediatrics neurobiology endocrinology and molecular biology explore the concepts of attachment and bonding from varying scientific perspectives Attachment and bonding are evolved processes the mechanisms that permit the development of selective social bonds are assumed to be very ancient based on neural circuitry rooted deep in mammalian evolution but the nature and timing of these processes and their ultimate and proximate causes are only beginning to be understood In this Dahlem Workshop Report scientists from different disciplines including anthropology psychology psychiatry and behavioral biology come together to explore the concepts of attachment and bonding from diverse perspectives In their studies they seek to understand the causes or the consequences of attachment and bonding in general and their different qualities in individual development in particular They address such questions as biobehavioral processes in attachment and bonding early social attachment and its influences on later patterns of behavior bonding later in life and adaptive and maladaptive or pathological outcomes The studies confirm that social bonds have consequences for virtually all aspects of behavior and may be protective in the face of both physical and emotional challenges **Rethinking Philosophers' Responsibility** Lydia Amir, 2017-11-06 Calling on philosophers as the custodians of rationality to reconsider their responsibility toward their communities and the state of civilization at large this book considers philosophy to be a practical discipline Largely foreign to philosophers and non philosophers alike this conception of philosophy discloses the relevance of its unique contributions to contemporary society

The book offers a compelling and accessible analysis of philosophy also in relation to religion psychology the New Age Movement and globalization and exemplifies through a wide range of current problems how philosophers can fulfil their responsibility Its argument that responsibility lies where one is capable of doing what is needed and even more so when no one else can do it targets philosophers However its innovative study of contemporary philosophy coupled with its original contributions to the problems at hand will engage academics and students from other disciplines as well as a general readership

**Connections Between Sexuality and Aggression** Dolf Zillmann,1998 An updated and expanded version of the 1984 edition Addresses the relationship between sexuality and aggression from a psychological and biological perspective

Looking for a Few Good Males Erika L. Milam,2010-03-15 2010 Outstanding Academic Title Choice Magazine Why do female animals select certain mates and how do scientists determine the answer In considering these questions Erika Lorraine Milam explores the fascinating patterns of experiment and interpretation that emerged as twentieth century researchers studied sexual selection and female choice Approaching the topic from both biological and animal studies perspectives Milam not only presents a broad history of sexual selection from Darwin to sociobiology but also analyzes the animal human continuum from the perspectives of sex evolution and behavior She asks how social and cultural assumptions influence human animal research and wonders about the implications of gender on scientific outcomes Although female choice appears to be a straightforward theoretical concept the study of sexual selection has been anything but simple Scientists in the early twentieth century investigated female choice in animals but did so with human social and sexual behavior as their ultimate objective By the 1940s evolutionary biologists and population geneticists shifted their focus studying instead how evolution affected natural animal populations Two decades later organismal biologists once again redefined the investigation of sexual selection as sociobiology came to dominate the discipline Outlining the ever changing history of this field of study Milam uncovers lost mid century research programs and finds that the discipline did not languish in the decades between Darwin s theory of sexual selection and sociobiology as observers commonly believed Rather population geneticists ethologists and organismal biologists alike continued to investigate this important theory throughout the twentieth century

*Infant Development* Michael E. Lamb,Heidi Keller,2019-01-04 Most German speaking researchers in the area of infant development are familiar with the research conducted in English However most English speaking researchers are relatively unaware of the work currently being done in German This volume is designed to remedy this imbalance and to promote international collaboration The book s contributors an exciting and innovative group of German speaking scholars provide up to date summaries of theoretical methodological and empirical perspectives on development They review evidence and present points of view of great interest to all people who are committed to furthering our collective understanding of development in infancy

The Oxford Handbook of Evolution, Biology, and Society Dr. Rosemary Hopcroft,2018-03-09 Evolution biology and society is a catch all phrase encompassing any scholarly work that utilizes

evolutionary theory and or biological or behavioral genetic methods in the study of the human social group and The Oxford Handbook of Evolution Biology and Society contains an much needed overview of research in the area by sociologists and other social scientists The examined topics cover a wide variety of issues including the origins of social solidarity religious beliefs sex differences gender inequality determinants of human happiness the nature of social stratification and inequality and its effects identity status and other group processes race ethnicity and race discrimination fertility and family processes crime and deviance and cultural and social change The scholars whose work is presented in this volume come from a variety of disciplines in addition to sociology including psychology political science and criminology Yet as the essays in this volume demonstrate the potential of theory and methods from biology for illuminating social phenomena is clear and sociologists stand to gain from learning more about them and using them in their own work The theory focuses on evolution by natural selection the primary paradigm of the biological sciences while the methods include the statistical analyses sociologists are familiar with as well as other methods that they may not be familiar with such as behavioral genetic methods methods for including genetic factors in statistical analyses gene wide association studies candidate gene studies and methods for testing levels of hormones and other biochemicals in blood and saliva and including these factors in analyses This work will be of interest to any sociologist with an interest in exploring the interaction of biological and sociological processes As an introduction to the field it is useful for teaching upper level or graduate students in sociology or a related social science

Cognition and Psychotherapy M.J. Mahoney, 2013-11-11 For almost three millennia philosophy and its more pragmatic offspring psychology and the cognitive sciences have struggled to understand the complex principles reflected in the patterned operations of the human mind What is knowledge How does it relate to what we feel and do What are the fundamental processes underlying attention perception intention learning memory and consciousness How are thought feeling and action related and what are the practical implications of our current knowledge for the everyday priorities of parenting education and counseling Such meaningful and fascinating questions lie at the heart of contemporary attempts to build a stronger working alliance among the fields of epistemology theories of knowledge the cognitive sciences and psychotherapy The proliferation and pervasiveness of what some have called cognitivism throughout all quarters of modern psychology represent a phenomenon of paradigmatic proportions The re emergence of cognitive concepts and perspectives whether portrayed as revolutionary reactive or evolutionary developmental in nature marks what may well be the single most formative theme in late twentieth century psychology Skeptics of the cognitive movement if it may be so called can readily note the necessary limits and liabilities of naive forms of metaphysics and mentalism The history of human ideas is writ large in the polarities of in here and out there from Plato Pythagoras and Kant to Locke Bacon and Watson
