Low-Dielectric Constant Materials III: Volume 476 Carlye Case,1997 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners Proceedings of the Symposia on Electrochemical Processing in ULSI Fabrication I Electrochemical Society. Dielectric Science and Technology Division,Electrochemical Society. Electrodeposition Division,Electrochemical Society. Meeting,1999 *Low Dielectric Constant Thin Film High Frequency Characterization Technique* Ge Song,2001 *Index of Conference Proceedings* British Library. Document Supply Centre,1998 Low-dielectric Constant Materials ,1997 **International Journal of Materials & Product Technology** ,2003 *Gallium Nitride and Related Materials II: Volume 468* C. R. Abernathy,H. Amano,J. C. Zolper,1997-08-13 This book from MRS dedicated to III Nitrides focuses on developments in AlN GaN InN and their alloys that are now finding application in short wavelength lasers 400nm cw at room temperature and high power electronics 2 8W mm at GHz Experts from fields including crystal growth condensed matter theory source chemistry device processing and device design come together in the volume to address issues of both scientific and technological relevance And while much of the book reports on advances in material preparation and the understanding of defect issues similar advances in material and device processing are also reported Topics include growth and doping substrates and substrate effects characterization processing and device performance and design **Low Dielectric Constant Materials for IC Applications** Paul S. Ho,Jihperng Leu,Wei William Lee,2012-12-06 Low dielectric constant materials are an important component of microelectronic devices This comprehensive book covers the latest low dielectric constant low k materials technology thin film materials characterization integration and reliability for back end interconnects and packaging applications in microelectronics Highly informative contributions from leading academic and industrial laboratories provide comprehensive information about materials technologies for **Chemistry in Microelectronics** Yannick Le Tiec,2013-02-28 Chemistry in Microelectronics Microelectronics is a complex world where many sciences need to collaborate to create nano objects we need expertise in electronics microelectronics physics optics and mechanics also crossing into chemistry electrochemistry as well as biology biochemistry and medicine Chemistry is involved in many fields from materials chemicals gases liquids or salts the basics of reactions and equilibrium to the optimized cleaning of surfaces and selective etching of specific layers In addition over recent decades the size of the transistors has been drastically reduced while the functionality of circuits has increased This book consists of five chapters covering the chemicals and sequences used in processing from cleaning to etching the role and impact of their purity along with the materials used in Front End Of the Line which corresponds to the heart and performance of individual transistors then moving on to the Back End Of the Line which is related to the interconnection of all the transistors Finally the need for specific functionalization also requires key knowledge on surface treatments and chemical management to allow new applications Materials for Optical Limiting II:

Volume 479 Richard Lee Sutherland, Richard Sutherland, 1997-12-30 The proliferation of lasers and systems employing lasers has brought with it the potential for adverse effects from these bright coherent light sources This includes the possibility of damage from pulsed lasers as well as temporary blinding by continuous waver lasers With nearly every wavelength possible being emitted by these sources there exists a need to develop optical limiters and tunable filters which can suppress undesired radiation of any wavelength This book addresses a number of materials and devices which have the potential for meeting the challenge The proceedings is divided into five parts Parts I and II cover research in organic and inorganic materials primarily based on nonlinear absorption or phase transitions for optical limiting of pulsed lasers Part III includes photo refractive materials and liquid crystals which find primary applications in dynamic filters Part IV covers various aspects of device and material characterization including nonlinear beam propagation effects Theoretical modelling of materials properties is the subject of Part V
