Lunar Planetary Surface Conditions:

Lunar and Planetary Surface Conditions Nicholas A. Weil, 2013-10-22 *Lunar and Planetary Surface Conditions* considers the inferential knowledge concerning the surfaces of the Moon and the planetary companions in the Solar System. The information presented in this four chapter book is based on remote observations and measurements from the vantage point of Earth and on the results obtained from accelerated space program of the United States and U S S R. Chapter 1 presents the prevalent hypotheses on the origin and age of the Solar System followed by a brief description of the methods and feasibility of information acquisition concerning lunar and planetary data either from fixed terrestrial observatories or from instrumented or manned space probes. Chapter 2 reviews all conditions pertaining to the surface aspects of the closest celestial neighbor the Moon. Sections in this chapter deal sequentially with the atmosphere temperature conditions subsurface stratification field intensities gravitational electric and magnetic and lastly with the biological conditions existing on the lunar surface. This chapter also provides information on the density of the lunar atmosphere under quiescent or high flux transient conditions on the topography of the lunar surface and on the probable proportion of crater covered areas in the highlands and on the Maria. Chapter 3 is a detailed treatment of the surface conditions on the terrestrial planets comprising Mercury Venus and Mars while Chapter 4 deals with similar information relating to the so called Jovian planets Jupiter Saturn Uranus Neptune and Pluto. This book will prove useful to lunar and planetary mission planners both those concerned with the purely scientific aspects of surfaces and immediate subsurfaces and those involved in the development of roving exploration vehicles. *Lunar Surface Studies*, 1962 **Planetary Atmospheres**, 1965 *High Temperature Gas-Solid Reactions in Earth and Planetary Processes* Penelope King, Bruce Fegley, Terry Seward, 2018-12-03 High temperature gas solid reactions are ubiquitous on planetary bodies distributing chemical elements over a range of geologic settings and temperatures. This volume reviews the critical role gas solid reactions play in early solar system formation volcanism metamorphism and industrial processes. The field evidence experimental and theoretical approaches for examining gas solid reaction are presented building on advances in fields outside of Earth Sciences. Computational chemistry techniques are used to probe the nature of molecular clusters and solvation in volcanic vapors and mineral gas reaction mechanisms. Specialised analytical methods for characterising solid reaction products are included since these reactions commonly form thin or dispersed films and metastable minerals. Finally the volume contains rich field examples laboratory experiments and thermodynamic modelling and kinetics of gas solid reactions on Earth Venus and beyond. **Publications** United States.
