Lung Development and Regeneration Donald J. Massaro, Gloria DeCarlo Massaro, Pierre Chambon, 2004-09-09 This reference compiles the most current technical and biological data available to survey the state of science in the care and management of patients with bronchopulmonary dysplasia COPD and other forms of lung disease tracking the initiation and progression of processes that cause airway obstruction the biologic and physiological abnormalities *Stem Cells in the Lung* Ivan Bertoncello, 2015-10-31 This book presents a comprehensive overview of the current understanding of the organization of endogenous lung stem and progenitor cell compartments during fetal lung development postnatal lung growth and in adulthood Progressing stage by stage the chapters on fetal lung development emphasize the integrated role of epithelial stromal vascular and neural cell elements in building a functional lung while the subsequent chapters on adult lung regeneration describe the nature and properties of adult lung stem progenitor cells distributed along the proximal distal axis of the airway tree The chapters on regulation of lung regeneration and repair discuss how regenerative cells interact with their niche microenvironment and how regulation of lung regeneration and repair in the steady state and following injury recapitulates ontogeny And lastly the chapters on cellular therapies for lung disease and bioengineering the lung focus on promising emerging therapies and approaches in lung regenerative medicine The scope of this volume of the Stem Cell Biology and Regenerative Medicine series focuses on exploring the topic of building and rebuilding the lung from a cellular rather than a molecular perspective Thus the section on cellular therapies does not include extensive coverage of each of the numerous lung diseases including cancer which could be amenable to stem cell based therapies although the final chapter does include some discussion on the future prospects and challenges All of the contributors are working on the cutting edge of the lung stem cell field making this book essential reading for those with an interest in the field of lung stem cell biology and the potential role of cellular therapies and tissue bioengineering approaches in lung regenerative medicine including biomedical scientists graduate students post graduate researchers and respiratory clinicians **Lung Development** Claude Gaultier, Jacques R Bourbon, Martin Post, 2013-05-27 Knowledge about the mechanisms of lung development has been growing rapidly especially with regard to cellular and molecular aspects of growth and differentiation This authoritative international volume reviews key aspects of lung development in health and disease by providing a comprehensive review of the complex series of cellular and molecular interactions required for lung development It covers such topics as pulmonary hypoplasia effects of malnutrition and pulmonary angiogenesis An indispensable reference for all those involved in studying or treating lung disease in neonates and children the book offers a unique view of the development of this essential organ *Fetal & Neonatal Lung Development* Alan H. Lung Stem Cells in Development, Health and Disease Nikolic, Marko Z.,Hogan, Brigid L.M.,2021-04-01 Most organs in the adult human body are able to maintain themselves and undergo repair after injury these processes are largely dependent on stem cells In this Monograph the Guest Editors bring together leading authors in the field to provide information about the different classes of stem cells present both in the developing and adult lung where they are found how they function in homeostasis and pathologic conditions the mechanisms that regulate their behaviour and how they may be harnessed for therapeutic purposes The book focuses on stem cells in the mouse and human lung but also includes the ferret as an increasingly important new model organism Chapters also discuss how lung tissue including endogenous stem cells can be generated in vitro from pluripotent stem cell lines This state of the art collection

Class I Histone Deacetylases in Lung Development and Regeneration Yi Wang, 2015 The generation and development of the mammalian lung requires an elegantly regulated molecular program to control cell number lineage specification as well as morphogenetic remodeling Histone deacetylases HDACs are a group of critical epigenetic factors that can mediate genome wide transcriptional repression However the functional roles of HDACs in lung development and regeneration have not been previously characterized In my dissertation I utilized a series of mouse genetic models ex vivo and in vitro assays to determine the functions of three members of class I HDAC family HDAC1 HDAC2 and HDAC3 in lung epithelial development and regeneration These studies reveal that HDAC1 and HDAC2 are redundantly required for the development and regeneration of Sox2 proximal lung endoderm progenitors via regulation of Bmp4 and cell cycle inhibitors while HDAC3 is critical for the alveolar epithelial remodeling and spreading during lung sacculation and alveologenesis These findings demonstrate strong evidence for the crucial contributions of HDACs to lung development and regeneration and provide novel insights into potential therapeutic directions for human lung diseases

Cell Therapy for Lung Disease Julia Polak, 2010 The use of stem cells to help with lung regeneration and repair is a novel therapy which could help phase out the need for conventional surgical or pharmacological approaches currently employed to treat diseases of the lung or other organs The present book explores all avenues of this new form of medical care moving swiftly but in depth from the basic science of lung development to the analyses of different stem cell types available for regeneration and on to the application of this knowledge base in initial clinical trials In this volume a stellar group of researchers converge from different angles to help towards clarifying the basic mechanisms of lung repair These range from basic concepts of regeneration and lung development the analyses of a variety of cell types that may be involved in lung repair to ways of creating complex lung structures including artificial and bioartificial lungs The book offers an insight into repair mechanisms of the diseased lung the role of specific lung niches and provides information on initial clinical trials as well as the use of stem cells as vehicles for gene therapy Ingenious technological aspects of assessing stem cell engraftment of stem cell bioprocessing are also included in this volume Publisher's website
