**Simulación visual de la iluminación** Javier Monedero Isorna, 2015-12-31 La simulación de la iluminación es uno de los grandes temas implicados en la creación de escenarios virtuales. Requiere asimilar diversas técnicas que derivan de principios teóricos sin cuyo conocimiento será difícil utilizar bien estas técnicas y también se necesita una buena formación visual, la capacidad de observar, de razonar visualmente, de reflexionar sobre las causas que subyacen a los fenómenos visuales, a las apariencias de objetos y escenarios familiares. La finalidad de este libro, que se publica en paralelo con otro sobre simulación visual de materiales, es abordar todos estos temas en profundidad de un modo coherente. En su I parte ofrece una visión general de los fundamentos teóricos de las técnicas de simulación visual, tanto por lo que hace a los conceptos y recursos disponibles como a las capacidades y limitaciones de nuestro sistema visual. En su II parte se desarrollan ejemplos de aplicación que faciliten su asimilación y su utilización práctica.
