**Number Theory** W.A. Coppel, 2006-06-15 Undergraduate courses in mathematics are commonly of two types On the one hand are courses in subjects such as linear algebra or real analysis with which it is considered that every student of mathematics should be acquainted On the other hand are courses given by lecturers in their own areas of specialization which are intended to serve as a preparation for research But after taking courses of only these two types students might not perceive the sometimes surprising interrelationships and analogies between different branches of mathematics and students who do not go on to become professional mathematicians might never gain a clear understanding of the nature and extent of mathematics The two volume Number Theory An Introduction to Mathematics attempts to provide such an understanding of the nature and extent of mathematics It is a modern introduction to the theory of numbers emphasizing its connections with other branches of mathematics Part A which should be accessible to a first year undergraduate deals with elementary number theory Part B is more advanced than the first and should give the reader some idea of the scope of mathematics today The connecting theme is the theory of numbers at first sight one of the most abstruse and irrelevant branches of mathematics Yet by exploring its many connections with other branches we may obtain a broad picture

*Globalization on the Margins* Iveta Silova, 2011-01-01 The essays in *Globalization on the Margins* explore the continuities and changes in Central Asian education development since the collapse of the Soviet Union in 1991 Reflecting on two decades of post socialist transformations they reveal that education systems in Central Asia responded to the rapidly changing political economic and social environment in profoundly new and unique ways Some countries moved towards Western models others went backwards and still others followed entirely new trajectories Yet elements of the old system remain Rather than viewing these post Soviet transformations in isolation *Globalization on the Margins* places its analyses within the global context by reflecting on the interaction between Soviet legacies and global education reform pressures in the Central Asian countries of Kazakhstan Kyrgyzstan Tajikistan Turkmenistan and Uzbekistan Instead of portraying the transition process as the influx of Western ideas into the region the authors provide new lenses to critically examine the multidirectional flow of ideas concepts and reform models within Central Asia Notwithstanding the variety of theoretical perspectives methodological approaches and conceptual lenses the authors have one thing in common both individually and collectively they reveal the complexity and uncertainty of the post Soviet transformations By highlighting the political nature of the transformation processes and the uniqueness of historical political social and cultural contexts of each particular country *Globalization on the Margins* portrays post Soviet education transformations as complex multidimensional and uncertain processes

*Transcendental and Algebraic Numbers* A. O. Gelfond, 2015-01-05 Primarily an advanced study of the modern theory of transcendental and algebraic numbers this treatment by a distinguished Soviet mathematician focuses on the theory s fundamental methods The text also chronicles the historical development of the theory s methods and explores the connections with other problems in number theory The problem of approximating algebraic numbers is also studied as a case in the theory of transcendental numbers Topics include the Thue Siegel theorem the Hermite Lindemann theorem on the transcendency of the exponential function and the work of C Siegel on the transcendency of the Bessel functions and of the solutions of other differential equations The final chapter considers the Gelfond Schneider theorem on the transcendency of  $\alpha$  to the power  $\beta$  Each proof is prefaced by a brief discussion of its scheme which provides a helpful guide to
