Schwartz, 2005-09-30 Children learn mathematics most effectively in contexts that are meaningful to them Realizing the potential of these contexts for

fostering young children's mathematical learning while nurturing and challenging them requires knowledge of mathematics as well as of child development. Avoiding the debates surrounding hands-on learning vs direct instruction, the author focuses on the value of different contexts for learning and illustrates ways to genuinely engage children as active learners. The work is rich with examples of children's interactions with each other and with adults as they utilize and extend their understanding of mathematics. Examples and guidelines for developing lessons and activities will be useful to educators and parents. Chapters explore how we underestimate young children's mathematical capabilities, how appropriate sequencing of learning and building on prior knowledge will enhance understanding, what teachers including parent teachers need to know, and high-stakes testing. This is a work that brings together the connections between knowing the basics and constructing knowledge in accessible and practical ways.

Early Childhood Curriculum Nancy Amanda Branscombe, Jan Gunnels Burcham, Kathryn Castle, Elaine Surbeck, 2013-07-24 Through its unique integration of curriculum and learning principles, Early Childhood Curriculum: A Constructivist Perspective, 2nd Edition, fosters authentic developmentally appropriate practice for both preschool and early elementary classrooms. The constructivist format of this book encourages active involvement on the part of readers by asking them to observe, question, reflect, research, and analyze, thus allowing readers to create their own knowledge through their responses and actions. Early Childhood Curriculum examines curricular goals such as autonomy, development, and problem solving, and links those goals with constructivist principles of learning. It explores ways teachers can create meaningful learning environments and choose curriculum tasks appropriately in all content areas that are linked to the learning and development needs of young children. The text provides a wealth of practical detail about implementing constructivist curriculum as the authors discuss classroom climate and management, room design, play, and cooperative learning, among other topics. The book also includes information about how teachers can meet required mandates and national and state standards in appropriate ways as they plan their curriculum and examines the early childhood educator's role with community agencies, reform, and legal mandates and public relations. **Special Features:** Curriculum Strategies highlight models for developing curriculum, including projects, curricular alignment, integration of various subject matter areas, and types of knowledge. Constructions promote problem solving by allowing students to explore, revisit, examine, and learn from first-hand experience. Multiple Perspectives from the Field provide interviews with teachers and other early childhood professionals, offering students a realistic look at the profession from a diverse group of educators. Teacher Dialogues explore a wide range of student concerns, including curriculum, learning environments, assessment, and documentation, representing a collaborative support group for pre-service teachers and readers.

 Sandra J. Stone, Kathleen G. Burriss, 2019-04-30 Presenting a compelling case for changing our system of education from a graded curriculum-centered approach to a multiage child-centered approach, Understanding Multiage Education is a comprehensive exploration of the philosophy and foundations of multiage education. [Moral Classrooms, Moral Children](#)
 Rheta DeVries, 2012-06-08 This classic bestseller, now updated for today's diverse teaching force and student populations, explores the benefits of sociomoral practices in the classroom. The authors draw on recent research to show how these approaches work with children ages 2-8. They focus on how to establish and maintain a classroom environment that

fosters children's intellectual, social, moral, emotional, and personality development. Extending the work of Jean Piaget, the authors advocate for a cooperative approach that contrasts with the coercion and unnecessary control that can be seen in many classrooms serving young children. Practical chapters demonstrate how the constructivist approach can be embedded in a school program by focusing on specific classroom situations and activities such as resolving conflict, group time, rule making, decision making, and voting, social and moral discussions, cooperative alternatives to discipline, and activity time.

The Political Economy of Contemporary Human Civilisation, Volume I Sangaralingam Ramesh, 2025-03-21. This book, the first of two volumes, examines the evolution of humanity and development of global economic systems to provide insight into the advances and challenges they have created. By placing modern technology and global crises within the context of long-term human development, it evaluates the threat of climate change on future generations by showing how past civilizations have survived and succumbed to climate events. A similar approach is taken with migration, where the current migration crisis is contrasted against historic migration patterns. The potential for artificial intelligence, quantum computing, nuclear fusion, and biotechnology to combat these challenges, as well as tackle poverty and inequality, are also discussed. This book highlights the consequences of human cognition and the constant desire for economic growth and evaluates whether they have been a net positive for human society. It will be of interest to students and researchers working on political economy and global challenges.

What If All the Kids are White? Louise Derman-Sparks, Patricia G. Ramsey, 2006. In this compelling volume, distinguished educators tackle a frequently asked question about multicultural education: How do I teach about racial and cultural diversity if all my students are white? The authors propose seven learning themes to help young white children resist messages of racism and build identity and skills for thriving in a multicultural country and world. The text includes strategies, resources, and classroom examples for implementing the learning themes in early childhood settings. Taking multicultural education to a new level, this practical guide places the development of white children's racial identity in the context of the historical construction of whiteness and racism in America and suggests strategies for nurturing a new white identity as the starting place for anti-bias multicultural work with children. It includes activities for families and staff, reflection questions, a review of white anti-racism activists, lists of suggested children's books, and organizational and website resources.

Understanding Assessment and Evaluation in Early Childhood Education Dominic F. Gullo, 2005. This bestselling book is still the best choice for helping early childhood teachers understand the process of assessment and evaluation to benefit young children. With the advent of the No Child Left Behind Act, testing, accountability, and standards are now pervasive throughout early childhood education. Completely revised to address the issues that have been raised by these new policies, the Second Edition features completely new chapters on assessment of children from culturally and linguistically diverse backgrounds, addressing the new makeup of today's classroom; assessment of children with special needs; focusing on the relationship among assessment, curriculum, and instruction; and the addition of a helpful glossary of terms and an annotated
