ECOOP - Object-Oriented Programming Erik Ernst, 2007-07-27 The 21st European Conference on Object Oriented Programming ECOOP2007 was held in Berlin Germany on July 30 to August 3 2007 ECOOP is the most important and inspiring forum in Europe and beyond for researchers practitioners and students working in that smorgasbord of topics and approaches known as object orientation This topic area was explored and challenged by excellent invited speakers two of which were the winners of this year's Dahl Nygaard award in the carefully refereed and selected technical papers on posters via demonstrations and in tutorials Each of the many workshops complemented this with a very interactive and dynamic treatment of more specific topics usually panels allowed for loud and lively disagreement Yet it is one of ECOOP's special qualities that this plethora of activities add up to a coherent and exciting whole rather than deteriorating into chaos The Program Committee received 161 submissions this year Only 135 of them were carried through the full review process because of a number of retractions and a number of submissions of abstracts that were never followed by a full paper However the remaining papers were of very high quality and we accepted 25 of them for publication Helping very good papers to be published is more useful than having an impressively low acceptance rate The papers were selected according to four groups of criteria whose priority depended on the paper relevance originality and significance precision and correctness and presentation and clarity Each paper had three four or five reviews depending on how controversial it was

academia **The Garbage Collection Handbook** Richard Jones, Antony Hosking, Eliot Moss, 2023-06-01 Published in 1996 Richard Jones's Garbage Collection was a milestone in the area of automatic memory management. Its widely acclaimed successor, *The Garbage Collection Handbook: The Art of Automatic Memory Management*, captured the state of the field in 2012. Modern technology developments have made memory management more challenging, interesting, and important than ever. This second edition updates the handbook, bringing together a wealth of knowledge gathered by automatic memory management researchers and developers over the past sixty years. The authors compare the most important approaches and state-of-the-art techniques in a single accessible framework. The book addresses new challenges to garbage collection made by recent advances in hardware and software. It explores the consequences of these changes for designers and implementers of high-performance garbage collectors. Along with simple and traditional algorithms, the book covers state-of-the-art parallel, incremental, concurrent, and real-time garbage collection. Algorithms and concepts are often described with pseudocode and illustrations. Features of this edition: Provides a complete up-to-date and authoritative sequel to the 1996 and 2012 books. Offers thorough coverage of parallel, concurrent, and real-time garbage collection algorithms. Discusses in detail modern high-performance commercial collectors. Explains some of the trickier aspects of garbage collection, including the interface to the run-time system. Over 90 more pages, including new chapters on persistence and energy-aware garbage collection. Backed by a comprehensive online database of over 3,400 garbage collection-related publications. The adoption of garbage collection by almost all modern programming languages makes a thorough understanding of this topic essential for any programmer. This authoritative handbook gives expert insight on how different collectors work, as well as the various issues currently facing garbage collectors. Armed with this knowledge, programmers can confidently select and configure the many choices of garbage collectors. <http://gchandbook.org> *Transactions on High-Performance Embedded Architectures and Compilers I* Mike O'Boyle, Francois Bodin, Marcelo Cintra, Sally A.
