Updates on Clinical and Molecular Epidemiology of Tuberculosis Weimin Li, Haican Liu, Yang Yang, Hui Jiang, 2024-03-08

Addressing the tuberculosis TB epidemic is crucial to reduce morbidity mortality and health care burden Cases of confirmed drug resistant TB have almost doubled over the past decade Drug resistance represents one of leading causes of death among TB patients and is responsible for approximately one third of TB related deaths worldwide which is associated with TB recurrence and transmission In recent years the emerging molecular epidemiology methods have attributed to better TB management For example in many settings studies using molecular epidemiology methods have demonstrated the recent transmission of Mycobacterium tuberculosis M TB strains However the transmission patterns of drug resistant TB in most low and middle income developing countries remain unclear Traditional transmission models based on clinical and epidemiological parameters were not sufficient to identify potential risk factors By using molecular epidemiology analysis further insights can be gained into the association between M TB isolates and epidemic populations This makes molecular epidemiology studies effective measures to establish phylogenetic relationships with clinical patients identify clusters and track TB transmission Studies investigating clinical and molecular epidemiology will provide theoretical basis and scientific strategy for TB prevention and control We hope to address the TB associated health care burden and the current insufficient or imprecise control strategies for TB management More importantly we would like to discuss more efficient approaches in this field with the development of molecular epidemiology method and share insights to reduce TB burden
