Reproductive Biology Of The Chelonia:

The Reproductive Biology of the Chelonia Gerald Kuchling, 2012-12-06 This book presents a comparative view of chelonian reproduction and discusses ecophysiological implications for their captive breeding Chelonians with their protective rigid armour are a phylogenetically antique group of reptiles which radiated to occupy niches from the open waters of the oceans to rivers creeks swamps forests savannahs and deserts A few North American turtle species have been well studied but until recently reproductive data on other chelonian species have been scarce The way in which chelonians adjust their conservative mode of reproduction to the various requirements of their habitats and life styles is the theme of this book the physiology of reproduction and its interplay with ecological conditions are its central subjects **The Biology of Sea Turtles** Peter L. Lutz, John A. Musick, 1996-12-09 Sea turtles have existed for millions of years making them fascinating subjects of study In the last 20 years the science of sea turtle biology has expanded at an exponential rate leading to major advances in many areas This book synthesizes the results of these advances and focuses on how these endangered marine reptiles operate in adapt to and are dependent upon particular features of their marine environment New technology in data gathering such as DNA analyses remote sensing and physiological monitoring techniques has led to a much greater understanding of the biology of the sea turtle at all stages of their life history **The Biology of Sea Turtles, Volume II** Peter L. Lutz, John A. Musick, Jeanette Wyneken, 2002-12-17 The success of the first volume of The Biology of Sea Turtles revealed a need for broad but comprehensive reviews of major recent advances in sea turtle biology Biology of Sea Turtles Volume II emphasizes practical aspects of biology that relate to sea turtle management and to changes in marine and coastal ecosystems These topics i **Chelonian Conservation and Biology**, 2006 **Reproductive Biology of Captive Green Sea Turtle Chelonia Mydas** James R. Wood, 1980 A captive colony of green sea turtles Chelonia mydas has been maintained and observed at a commercial sea turtle farm on Grand Cayman Island B W I since 1973 Observations of this breeding colony show that the mating and nesting behaviour of the captive green sea turtle is similar to that observed in wild populations Evidence indicates that mating observed prior to a female s nesting in a given season determines the hatchability of that season s egg production Annual per female egg production of the captive colony appears to be two to five times greater than that reported for wild colonies Observations on the reproductive biology of green sea turtles hatched and raised under farm conditions suggests that the minimum age of sexual maturity is eight to nine years of age The number of eggs per nest the number of nests per season per female and hatch rate tend to increase with successive seasons nesting for these turtles reaching sexual maturity *Hormones and Reproduction of Vertebrates, Volume 3* David O. Norris, Kristin H. Lopez, 2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and

our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them

Reptile Ecology and Conservation C. Kenneth Dodd, 2016 This practical handbook of reptile field ecology and conservation brings together a distinguished international group of reptile researchers to provide a state of the art review of the many new and exciting techniques used to study reptiles The authors describe ecological sampling techniques and how they are implemented to monitor the conservation status and population trends of snakes lizards tuatara turtles and crocodilians throughout the world Emphasis is placed on the extent of statistical inference and the biases associated with different techniques and analyses The chapters focus on the application of field research and data analysis for achieving an understanding of reptile life history population dynamics movement patterns thermal ecology conservation status and the relationship between reptiles and their environment The book emphasises the need for thorough planning and demonstrates how a multi dimensional approach incorporates information related to morphology genetics molecular biology epidemiology statistical modelling animal welfare and biosecurity Although accentuating field sampling sections on experimental applications in laboratories and zoos thermal ecology genetics landscape ecology disease and biosecurity and management options are included Much of this information is scattered in the scientific literature or not readily available and the intention is to provide an affordable comprehensive synthesis for use by graduate students researchers and practising conservationists worldwide

Hormones and Reproduction of Vertebrates David O. Norris, Kristin H. Lopez, 2010-11-25 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research

Toxicology of Reptiles Susan C. M. Gardner, Eva Oberdorster, 2016-04-19 Toxicology of Reptiles cohesively summarizes much of the cutting edge research taking place in fields such as reptilian endocrinology neurophysiology immunology and ecology It also addresses conservation needs along with the complications often associated with population studies The text is easy to synthesize and apply in the evaluation

Biological Report, 1984

The Ecology, Exploitation and Conservation of River Turtles Don Moll, Edward O. Moll, 2004-04-08 The underlying theme of this book is that a widespread taxonomically diverse group of animals important both from ecological

and human resource perspectives remains poorly understood and in decline while receiving scant attention from the ecological and conservation community. This volume proposes a comprehensive overview of the world's river turtles ecology, conservation and management. It begins with a categorization of taxa which inhabit flowing water habitats followed by information on their evolutionary and physical diversity and biogeography. Within the framework of ecology, the authors discuss the composition of river turtle communities in different types of lotic habitats and regions, population dynamics, movements, reproductive characteristics and behavior, predators and feeding relationships. In a conservation and management section, the authors identify and evaluate the nature and intensity of factors which threaten river turtle survival, almost all of which involve direct human exploitation or indirect effects of human-induced habitat alteration and degradation. They then list and evaluate the various schemes which have been proposed or employed to halt declines and restore populations and make recommendations for future management plans for specific species and regions. In closing, they state their viewpoint concerning future research directions and priorities and an evaluation of future prospects for survival of the world's river turtle species.
