Shapes Touch Feel:

SuperBaby Jenn Mann, 2010-09-07 The first three years of life are the most important for nurturing a child's full potential. That's when they start forming attachments, developing a sense of self and learning to trust. During this time, there are critical windows of opportunity that parents can take advantage of if they know how. In a dozen succinct yet information-packed chapters, award-winning columnist and professional therapist Dr. Jenn Berman gives parents the knowledge they need. Her enlightening sidebars, bulleted lists, and concrete, easy-to-use strategies will help parents raise happy, healthy babies who grow to be flourishing toddlers and successful adults. *The Hand, an Organ of the Mind* Zdravko Radman, 2013-05-10 Theoretical and empirical accounts of the interconnectedness between the manual and the mental suggest that the hand can be understood as a cognitive instrument. Cartesian-inspired dualism enforces a theoretical distinction between the motor and the cognitive and locates the mental exclusively in the head. This collection, focusing on the hand, challenges this dichotomy, offering theoretical and empirical perspectives on the interconnectedness and interdependence of the manual and mental. The contributors explore the possibility that the hand, far from being the merely mechanical executor of preconceived mental plans, possesses its own know-how, enabling embodied beings to navigate the natural social and cultural world without engaging propositional thought, consciousness, and deliberation. The contributors consider not only broad philosophical questions ranging from the nature of embodiment, enaction, and the extended mind to the phenomenology of agency, but also such specific issues as touching, grasping, gesturing, sociality, and simulation. They show that the capacities of the hand include perception on its own and in association with other modalities, action, extended cognition, social interaction, and communication. Taken together, their accounts offer a handbook of cutting-edge research exploring the ways that the manual shapes and reshapes the mental and creates conditions for embodied agents to act in the world. Introspection and Consciousness Declan Smithies, Daniel Stoljar, 2012-07-11 The topic of introspection stands at the interface between questions in epistemology about the nature of self-knowledge and questions in the philosophy of mind about the nature of consciousness. What is the nature of introspection such that it provides us with a distinctive way of knowing about our own conscious mental states? And what is the nature of consciousness such that we can know about our own conscious mental states by introspection? How should we understand the relationship between consciousness and introspective self-knowledge? Should we explain consciousness in terms of introspective self-knowledge or vice versa? Until recently, questions in epistemology and the philosophy of mind were pursued largely in isolation from one another. This volume aims to integrate these two lines of research by bringing together fourteen new essays and one reprinted essay on
