The Firm as a Collaborative Community Charles Heckscher, Paul Adler, 2006-03-02 This volume explores the changing nature of community in modern corporations Community within and between firms the fabric of trust so essential to contemporary business has long been based on loyalty This loyalty has been largely destroyed by three decades of economic turbulence downsizing and restructuring Yet community is more important than ever in an increasingly complex knowledge intensive economy The thesis of this volume is that a new form of community is slowly emerging one that is more flexible and wider in scope than the community of loyalty and that transcends the limitations of both traditional Gemeinschaft and modern Gesellschaft We call this form collaborative community The trend towards collaborative community is difficult to detect amidst the ferocious forces of market and bureaucratic rationalization But close analysis of some of America's most successful corporations reveals three dimensions of the emerging form a shared ethic of interdependent contribution distinct from the uneasy mix of loyalty and individualism that prevailed for so long a formalized set of norms of interdependent process management that

include iterative co design metaphoric search and systematic mutual understanding distinct from both rigid authority hierarchies and informal log rolling An interdependent social identity that supports these organizational features distinct from both dependent traditionalistic identities and the independence of the autonomous self that is often associated with Western culture This volume is a collaborative effort of leading scholars in organization studies to delineate the new form of community and the forces encouraging and constraining its growth The contributors combine sociology and psychology theory with detailed analysis of business cases at the firm and inter firm level *Organizational Design* Richard M. Virtualization of Universities Thomas Pfeffer, 2011-12-08. The purpose of this volume is to shape conceptual tools to understand the impact of new information and communication technologies (ICTs) on the organization of universities. Traditional research-based universities, the most typical representatives of the higher education system, find themselves challenged by the speed and the wide range of technical innovations but also by a vast array of implicit assumptions and explicit promises associated with the distribution of digital media. The author observes that as universities increasingly use digital media, computers and the Internet to accomplish their tasks, a transformation takes place in an evolutionary rather than in a revolutionary way. Using the University of Klagenfurt as an in-depth case study, he explores such dynamic issues as how digital media affect the practice of research, the preservation and dissemination of knowledge, for example through publishing and archiving, and delivery of education at universities. More broadly, he considers issues of organizational culture and design, administration and leadership as universities integrate digital technologies into all aspects of their operations.
