Shaping Survival:

Shaping the Futures of Work Nilanjan Raghunath, 2021-09-15 The widespread belief that tech savvy educated millennials are well positioned to handle the challenges of the fourth industrial revolution is unfounded. It does not fully grasp the reality of a flux society where relevant technological skills and knowledge are continuously changing; no one is permanently tech savvy. Millennials like other generations face the challenge of needing to continually reskill. This has compounded their struggle to begin their careers at a point when there is no longer any guarantee of lifetime employment or retirement at a set age. *Shaping the Futures of Work* is a timely sociological exploration of the impact of technological innovations on employment. Nilanjan Raghunath proposes that stakeholders such as states, enterprises, and citizens hold equally important roles in ensuring that people can adapt, innovate, and thrive within conditions of flux. A promising model focuses on collaboration and proactive governance. While good governance includes citizen engagement, proactive governance goes one step further, creating inclusive policies, roadmaps, and infrastructure for social and economic progress. This book reveals that lifelong learning and adaptability are imperative even for well-educated professionals. Using Singapore and Singaporean millennials as a case study, Raghunath examines proactive governance and delivers research and analysis to elucidate career trajectories, pointing to a work ethic that aims to engage with technological futures. Looking at local and global sociological literature to confirm the need for proactive governance, *Shaping the Futures of Work* suggests that Singaporean millennials and professionals around the world need to better prepare themselves for flux, risk, failure, and reinvention for career mobility.

Plasma Membrane Shaping Shiro Suetsugu, 2022-09-08 *Plasma Membrane Shaping* summarizes current knowledge on how cells shape their membrane. Organized in four sections, the book opens with a broad overview of the plasma membrane: its composition, usual shapes, and substructures. Actin, WASP, arp2/3, structures, BAR domains, and Ankyrin repeat domains, dynamin, and phospholipid signaling. Other sections cover the shaping of the plasma membrane for transport processes, discussions on exosomes, microvesicles, and endosomes, clathrin-coated pits, caveolae, and other endocytic pits, membrane deformation for cell movement, and some of the most current dry and wet lab research techniques to investigate cellular membrane shaping. This is an ideal resource for new researchers coming into this area, as well as for graduate students. The methods section will be of interest to both microscopists and computer scientists dedicated to the visualization, data collection, and analysis of plasma membrane shaping experiments. Covers membrane shaping for both cytoskeleton and cell movement. Includes dry and wet lab research methods of plasma membrane shaping. Describes the molecular machinery involved with protein and lipid balance in the plasma membrane. Presents the coordination of cellular structures involved in cell deformation and motion.

The Politics of Trauma Staci K. Haines, 2019-11-19 An essential tool for healers, therapists, activists, and trauma survivors who are interested in a justice-centered approach to somatic transformation. *The Politics of Trauma* offers somatics with a social analysis. This book is for therapists and social activists.

who understand that trauma healing is not just for individuals and that social change is not just for movement builders Just as health practitioners need to consider the societal factors underlying trauma so too must activists understand the physical and mental impacts of trauma on their own lives and the lives of the communities with whom they organize Trauma healing and social change are at their best interdependent Somatics has proven to be particularly effective in addressing trauma but in practice it typically focuses solely on the individual failing to integrate the social conditions that create trauma in the first place Staci K Haines somatic innovator and cofounder of generative somatics invites readers to look beyond individual experiences of body and mind to examine the social political and economic roots of trauma including racism environmental degradation sexism and poverty Haines helps readers identify understand and address these sources of trauma to help us bridge individual healing with social transformation

Shaping China's Future In World Affairs Robert G

Sutter,2019-06-26 This book considers Chinese foreign policy and China's future role in world affairs in the context of the country's recent past Robert Sutter shows that although it appears to be in U.S. interests for post Mao leaders to continue moving toward international norms a post Deng leadership backed by growing economic and military power and reflecting profound changes in China's economy and society could move in markedly different directions Most foreign powers appear willing to accommodate China avoiding actions that could prompt a sharp shift in Chinese foreign policy but Sutter argues that current U.S. policy intrudes on so many issues that are particularly sensitive for Beijing and for China's future that it represents perhaps the most critical variable determining how China will position itself in world affairs Concluding that there is no guarantee the United States will use this influence wisely Sutter examines the uncertainty and unpredictability of U.S. foreign policy in the post Cold War environment that work against the creation of an effective U.S. policy toward China
