**Climate Change 1995: Economic and Social Dimensions of Climate Change** Hoe-söng Yi, Intergovernmental Panel on Climate Change. Working Group III., 1996-06-27 The consequences of climate change for society are analysed in this landmark assessment from the IPCC This book assesses the available knowledge on the many issues that society has to face including the international decision making framework applicability to climate change of techniques for assessing costs and benefits the significant social costs of projected climate change and the economic assessment of policy instruments to combat climate change nationally and internationally Some important conclusions of this Second Assessment Report indicate that 10 to 30% of greenhouse gas emissions in most countries can be reduced at negative or zero cost no regrets measures Also the literature indicates that climate change will cause aggregate net damage which provides an economic rationale for going beyond no regrets measures It also indicates that a portfolio of mitigation adaptation and research measures is a sound strategy for addressing climate change given the remaining uncertainties This report speaks directly to the issues that are faced by the many countries committed to limit emissions of greenhouse gases by the year 2000 and currently negotiating actions to be taken beyond that date Will be of great value to the international community of policymakers interested in the consequences of climate change as well as to economists social and natural scientists

in science which see both nature and human beings as warp and woof woven beautifully into the divine tapestry     The Implementation of the Paris Agreement on Climate Change Vesselin Popovski,2018-10-03 In December 2015 196 parties to the United Nations Framework Convention on Climate Change UNFCCC adopted the Paris Agreement seen as a decisive landmark for global action to stop human induced climate change The Paris Agreement will replace the 1997 Kyoto Protocol which expires in 2020 and it creates legally binding obligations on the parties based on their own bottom up voluntary commitments to implement Nationally Determined Contributions NDCs The codification of the climate change regime has advanced well but the implementation of it remains uncertain This book focuses on the implementation prospects of the Agreement which is a challenge for all and will require a fully comprehensive burden sharing framework Parties need to meet their own NDCs but also to finance and transfer technology to others who do not have enough How equity based and facilitative the process will be is of crucial importance The volume examines a broad range of issues including the lessons that can be learnt from the implementation of previous environmental legal regimes climate policies at national and sub national levels and whether the implementation mechanisms in the Paris Agreement are likely to be sufficient Written by leading experts and practitioners the book diagnoses the gaps and lays the ground for future exploration of implementation options This collection will be of interest to policy makers academics practitioners students and researchers focusing on climate change governance     *Handbook of Law and Economics* A. Mitchell Polinsky,Steven Shavell,2007-11-07 Law can be viewed as a body of rules and legal sanctions that channel behavior in socially desirable directions for example by encouraging individuals to take proper precautions to prevent accidents or by discouraging competitors from colluding to raise prices The incentives created by the legal system are thus a natural subject of study by economists Moreover given the importance of law to the welfare of societies the economic analysis of law merits prominent treatment as a subdiscipline of economics Our hope is that this two volume Handbook will foster the study of the legal system by economists The two volumes form a comprehensive and accessible survey of the current state of the field Chapters prepared by leading specialists of the area Summarizes received results as well as new developments     Emissions Trading for Climate Policy Bernd Hansjürgens,2005-07-28 The 1997 Kyoto Conference introduced emissions trading as a policy instrument for climate protection Bringing together scholars in the fields of economics political science and law this book which was originally published in 2005 provides a description analysis and evaluation of different aspects of emissions trading as an instrument to control greenhouse gases The authors analyse theoretical aspects of regulatory instruments for climate policy provide an overview of US experience with market based instruments draw lessons from trading schemes for the control of greenhouse gases and discuss options for emissions trading in climate policy They also highlight the background of climate policy and instrument choice in the US and Europe and the foundation of systems in Europe particularly the EU s directive for a CO2 emissions trading system     The Challenge of Climate Change Daniel P. Perlmuter,Robert L. Rothstein,2011-06-13 Global

warming and climate change present complex interlocking issues of public policy multilateral negotiation and technological advancement This book explores both the problems and the opportunities presented by international agreements and examines the technological developments and policy goals that can be pursued to effect the changes necessary Specific steps are proposed in the form of a list of priorities This book represents a cooperative enterprise between two authors of different backgrounds engineering and international relations and is directed to an educated but non professional lay audience without any formal training in either science or international relations The points of view of negotiators from both developed and developing nations are presented and compared Each topic is presented from both technical and policy perspectives as a means to evaluate the variety of proposals that have been offered as remedies to global warming The text is supported by illustrations and tables where appropriate including a list of References at the end of each chapter

**Views from the Alps** Peter Cebon,1998 Although climate change is a global problem there is growing recognition of the need to look at its regional manifestations and management This book takes such an approach to the Alpine region The result of the ongoing Swiss research program Climate and Environment in the Alpine Region Clear it incorporates the work of an independent network of approximately fifty researchers from a variety of disciplines

**Keeping International Commitments** Eleonore Kokotsis,2014-04-08 This study is the first to offer explanations for compliance with G7 commitments by identifying the patterns explaining the causes and exploring the processes of this compliance from 1988 1995 It provides the only systematic review of the G7 s compliance record in the post Cold War globalizing system of the 1990s and in regard to important environment and development commitments that have often dominated the Summit s agenda during this third cycle of summitry It draws on explanatory factors for Summit compliance from three bodies of international relations theory including regime theory concert theory and the recent extension of regime theory to embrace the effects of domestic political institutions

**Improving Compliance with International Environmental Law** Jacob Werksman,James Cameron,Peter Roderick,2014-01-14 Measures for regulating the behaviour of nation states in relation to the global environment have increasingly taken the form of international treaties and conventions Many have argued that this has proved to be an ineffective way of halting unsustainable development for the provisions of these agreements are either too weak or are flouted regularly by the parties concerned This volume seeks to address the crucial question of how compliance with these agreements could be encouraged effectively without damaging the fragile political consensus that is emerging on environmental issues With extensive use of case studies Improving Compliance will make stimulating reading for all students and researchers working in this area as well as for anyone concerned about the effectiveness of international environmental measures

Natural Resource Degradation and Human-Nature Wellbeing Rashed Al Mahmud Titumir,Tanjila Afrin,Mohammad Saeed Islam,2023-03-09 The book addresses the gaps in the body of knowledge from two grounds Firstly it adds value through explaining the dynamics of natural resource governance by focusing on the particular arenas of

biodiversity resources water resources and climate change in developing country context Secondly it critically scrutinizes the market centric perspectives on one hand and combines political economy questions that are generally overlooked in discussions of current resource governance framework on the other It develops a new framework to examine the reasons behind the degradations of natural resources to offer sustainable solutions to the problems It shows that the natural resources have been exploited beyond sustainable limits due to the structural rigidities embedded in and reproduced by fragile institutions and unequal power sharing arrangements under the market centric economic system The book formulates a new understanding of sustainability in case of usage and management of natural resources by incorporating the idea of human sociality It highlights the importance of the well being of nature and human beings must go side by side one without the other is not a sustainable option The book contains key learnings for scholars and researchers working in the field of development studies who wish to gain a deeper understanding on the sustainable natural resource governance specifically in the contexts of developing countries For policymakers and policy advocates the book serves as the groundwork on policies regarding biodiversity resources water resources and climate change specific to the context of developing countries providing more relevant contents in terms of laying out justification for policy objectives Economics of the Environment

**of Carbon Markets** Benjamin Stephan, Richard Lane, 2014-08-27 The carbon markets are in the middle of a fundamental crisis a crisis marked by collapsing prices fleeing actors and ever increasing greenhouse gas levels Yet carbon trading remains at the heart of global attempts to respond to climate change Not only this but markets continue to proliferate particularly in the Global South The Politics of Carbon Markets helps to make sense of this paradox and brings two urgently needed insights to the analysis of carbon markets First the markets must be understood in relation to the politics involved in their development maintenance and opposition Second this politics is multiform and pervasive Implementation of new techniques and measuring tools policy development and contestation and the structuring context of institutional settings and macro social forces all involve a variety of political actors and create new forms of political agency The contributions study the total extent of the carbon markets from their prehistory to their contemporary expansion and wider impacts This wide ranging political perspective on the carbon markets is invaluable to those studying and interested in ecological markets climate change governance and environmental politics Making Global Economic Governance Effective Marina

Larionova,2016-06-03 Today s world is crowded with international laws and institutions that govern the global economy This post World War II accumulation of hard multilateral and soft plurilateral institutions by no means constitutes a comprehensive coherent and effective system of global economic governance As intensifying globalization thrusts many longstanding domestic issues onto the international stage there is a growing need to create at the global level the more comprehensive coherent and effective governance system that citizens have long taken for granted at home This book offers the first comprehensive look at this critical question of international relations It examines how and how well the multilateral organizations and the G8 are dealing with the central challenges facing the contemporary international community how they have worked well and poorly together and how they can work together more effectively to provide badly needed public goods It is an ideal reference guide for anyone interested in institutions of global governance      *Public Policies for Environmental Protection* Paul Portney,Robert N. Stavins,2010-10-28 The first edition of Public Policies for Environmental Protection contributed significantly to the incorporation of economic analysis in the study of environmental policy Fully revised to account for changes in the institutional legal and regulatory framework of environmental policy the second edition features updated chapters on the EPA and federal regulation air and water pollution policy and hazardous and toxic substances It includes entirely new chapters on market based environmental policies global climate change solid waste and for the first time coverage of the Safe Drinking Water Act Portney Stavins and their contributors provide an invaluable resource for researchers policymakers industry professionals and journalists anyone who needs up to date information on U S environmental policy With their careful explanation of policy alternatives the authors provide an ideal book for students in courses about environmental economics or environmental politics      **Climate Capitalism** Peter Newell,Matthew Paterson,2010-05-27 Explores how we should react to the political dilemmas of adapting the global economy to confront climate change
