*Climate Change and International Politics* Narottam Gaan,2008 Accustomed to understanding security primarily a matter spatial exercise in distancing and boundary making on the part of states and their military alliances to secure borders and institutions from outside threats the nations of the world have so far given a short shrift to the gravity of environmental degradation as a factor or catalyst of intrastate or interstate conflict or at worst a security threat to entire humanity until the shafts of retaliatory responses of the infuriated climate change to the cloddish and brutish power of the rich industrialized nations to destroy it by its emission of carbon dioxide and other greenhouse gases pointed toward man menacing with funereal and cascading consequences of global warming Thus climate change which has so far been on the fringe of human concern or in American President's view a myth or a hoax has catapulted into the center stage of great political flare up among the nations of the world on the issue of apportioning the responsibility on rich industrialized nations or the populous South to mitigate the dangers of climate change which seems to be mired in the contradiction between North's advocacy of inequity in having uncontested access to the atmosphere as carbon sinks and equity while disabusing the atmosphere of the carbon debris Not walking on trodden furrows this book expatiates on the desideratum of a paradigm shift from faith in the Newtonian mechanistic view of the universe to a faith in the profundity of Eastern wisdom and new insights presently found in science which see both nature and human beings as warp and woof woven beautifully into the divine tapestry

Distributional Choices in EU Climate Change Law and Policy Javier De Cendra de Larragán, 2011-01-01 Climate change policy inevitably has two core components the goals and the means chosen to pursue those goals Decisions on goals and means necessarily have distributional consequences Any policy choice generates winners and losers While this outcome cannot be avoided even doing nothing leads to distributional consequences policymakers can through the choice design and implementation of policies shape to some extent the distribution of the burdens of mitigation and adaptation to climate change In greater depth than any previous legal study in the field this book deals with the way in which the European Union EU has dealt with climate change and with the distribution of the benefits and costs of climate change mitigation policies among affected parties With extraordinary thoroughness the author assesses the legality of choices made particularly concerning mitigation targets and timelines and examines the role that legal principles can play in the adoption interpretation and judicial testing of distributional choices His analysis of the tension between such choices and EU law is bolstered by an exploration of emerging legal principles which could provide additional guidance in this challenging and controversial area Among the core issues dealt with are the following relationship among mitigation adaptation and sustainable development regulations as means to make distributional choices distributional choices between generations and the principle of intergenerational justice distributional choices concerning firms and individuals the participation of affected parties in distributional choices access to justice in EU courts to challenge violations of procedural environmental rights the role of legal principles in making evaluating and testing distributional choices the principle of proportionality with its tests of appropriateness and necessity the principle of equality the precautionary principle the principle of prevention the polluter pays principle A concluding chapter offers deeply informed recommendations regarding the design of EU climate change law including a preliminary assessment of EU wide personal carbon trading In its insightful illumination of how the inevitable trade offs weaknesses inconsistencies and ambiguities in the way law deals with distributional choices renders them vulnerable to external pressures this book will be of enormous value to regulators and policymakers concerned with effective efficient and fair climate change measures As a critical assessment of existing EU climate change laws and policies and as a systematic analysis of the problem of burden sharing this book will also prove highly valuable to academics in environmental fields of study
