Long Run Economic Relationships Readings In Cointegration:

The Principles of Practical Cost-benefit Analysis Robert Sugden, 1978 Long-run economic relationships Clive William John Granger, 1991 Time-Series-Based Econometrics Michio Hatanaka, 1996-01-25 In the last decade time series econometrics has made extraordinary developments on unit roots and cointegration However this progress has taken divergent directions and has been subjected to criticism from outside the field In this book Professor Hatanaka surveys the field examines those portions that are useful for macroeconomics and responds to the criticism His survey of the literature covers not only econometric methods but also the application of these methods to macroeconomic studies The most vigorous criticism has been that unit roots do not exist in macroeconomic variables and thus that cointegration analysis is irrelevant to macroeconomics The judgement of this book is that unit roots are present in macroeconomic variables when we consider periods of 20 to 40 years but that the critics may be right when periods of 100 years are considered Fortunately most of the time series data used for macroeconomic studies cover fall within the shorter time span Among the numerous methods for unit roots and cointegration those useful from macroeconomic studies are examined and explained in detail without overburdening the reader with unnecessary mathematics Other less applicable methods are discussed briefly and their weaknesses are exposed Hatanaka has rigorously based his judgements about usefulness on whether the inference is appropriate for the length of the data sets available and also on whether a proper inference can be made on the sort of propositions that macroeconomists wish to test This book highlights the relations between cointegration and economic theories and presents cointegrated regression as a revolution in econometric methods Its analysis is of relevance to academic and professional or applied econometricians Step by step explanations of concepts and techniques make the book a self contained text for graduate students Econometrics Badi H. Baltagi, 2007-11-21 Here at last is the fourth edition of the textbook that is required reading for economics students as well as those practising applied economics Not only does it teach some of the basic econometric methods and the underlying assumptions behind them but it also includes a simple and concise treatment of more advanced topics from spatial correlation to time series analysis This book's strength lies in its ability to present complex material in a simple yet rigorous manner This superb fourth edition updates identification and estimation methods in the simultaneous equation model It also reviews the problem of weak instrumental variables as well as updating panel data methods **A Companion to Theoretical Econometrics** Badi H. Baltagi, 2008-04-15 A Companion to Theoretical Econometrics provides a comprehensive reference to the basics of econometrics This companion focuses on the foundations of the field and at the same time integrates popular topics often encountered by practitioners The chapters are written by international experts and provide up to date research in areas not usually covered by standard econometric texts Focuses on the foundations of econometrics Integrates real world topics encountered by professionals and practitioners Draws on up to date research in areas not covered by standard econometrics texts Organized to provide clear accessible

information and point to further readings **Econometric Business Cycle Research** Jan Jacobs,2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories EBCR combines economic theory and measurement in the study of business cycles i e ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not over turned in the empirical illustrations The main conclusion does not imply the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable **Nonlinear Time Series Analysis of Economic and Financial Data** Philip Rothman,1999-01-31 Nonlinear Time Series Analysis of Economic and Financial Data provides an examination of the flourishing interest that has developed in this area over the past decade The constant theme throughout this work is that standard linear time series tools leave unexamined and unexploited economically significant features in frequently used data sets The book comprises original contributions written by specialists in the field and offers a combination of both applied and methodological papers It will be useful to both seasoned veterans of nonlinear time series analysis and those searching for an informative panoramic look at front line developments in the area *The 9th Annual Conference of the Economic Forum of Entrepreneurship & International Business* Ghada Gomaa A. indices this volume brings together authoritative empirical studies of countries including the US the UK Germany France Sweden Italy and Japan The authors conclude by showing how Divisia monetary indices act as a useful supplement to traditional monetary aggregates

The Dynamic Macroeconomic Effects of Public Capital Christophe Kamps, 2004-12-22 This book analyzes the dynamic macroeconomic effects of public capital in industrialized countries The issue of whether public capital is productive has received a great deal of recent attention Yet existing empirical analyses have been limited to a small set of countries This book presents a new database that provides internationally comparable capital stock estimates for 22 OECD countries for the 1960 2001 period Building on this database the book estimates the dynamic effects of public capital using a variety of econometric methods The results suggest that public capital is productive in OECD countries on average The theoretical analysis based on a dynamic general equilibrium model shows that the effects of public capital depend crucially on the way the government chooses to finance additional spending

Interest Rates and Budget Deficits Kanhaya L. Gupta, Bakhtiar Moazzami, 2005-10-11 There is widespread belief that the high interest rates of the 1980s and 1990s in the developed world have been caused by high budget deficits Yet there is no conclusive evidence to support such a belief This book systematically examines this and other questions relating to the behaviour of real interest rates in eleven developed countries The results show that generalizations across the countries can be hazardous and strongly suggests that factors specific to individual countries are still of vital importance

Forecasting Financial Markets in India Rudra Prakash Pradhan, 2009 Papers presented at the Forecasting Financial Markets in India held at Kharagpur during 29 31 December 2008

The Second Law of Economics Reiner Kümmler, 2011-06-24 Nothing happens in the world without energy conversion and entropy production These fundamental natural laws are familiar to most of us when applied to the evolution of stars biological processes or the working of an internal combustion engine but what about industrial economies and wealth production or their constant companion pollution Does economics conform to the First and the Second Law of Thermodynamics In this important book Reiner Kümmler takes us on a fascinating tour of these laws and their influence on natural technological and social evolution Analyzing economic growth in Germany Japan and the United States in light of technological constraints on capital labor and energy Professor Kümmler upends conventional economic wisdom by showing that the productive power of energy far outweighs its small share of costs while for labor just the opposite is true Wealth creation by energy conversion is accompanied and limited by polluting emissions that are coupled to entropy production

These facts constitute the Second Law of Economics They take on unprecedented importance in a world that is facing peak oil debt driven economic turmoil and threats from pollution and climate change They complement the First Law of Economics Wealth is allocated on markets and the legal framework determines the outcome By applying the First and Second Law we understand the true origins of wealth production the issues that imperil the goal of sustainable development and the technological options that are compatible both with this goal and with natural laws The critical role of energy and entropy in the productive sectors of the economy must be realized if we are to create a road map that avoids a Dark Age of shrinking natural resources environmental degradation and increasing social tensions
