Why Ecosystems Matter Christopher Wills,2024-06-26 How our growing knowledge of the evolution of complex ecosystems using the latest genetic tools can help us heal them and survive This is not another Chicken Little book about the environment Every reader already knows how overpopulation ignorance and tribalism are contributing to environmental destruction and breakdowns in public health We are all aware of the grim possibility that during our lifetimes the Earth might flip to a new ecological equilibrium threatening our very survival Why Ecosystems Matter explores an exciting new way to avoid such threats by using our exponentially growing knowledge of how evolution has shaped and is continuing to shape the complex communities of living ecosystems on which we all depend Throughout this book we will visit ecosystems where the author has worked or has had direct experience beginning with a tour of the amazing series of ecosystems that span the entire eastern slope of the Peruvian Andes This journey provides a vivid glimpse of ecosystems diversity and capacity for rapid change Next we trace how Darwin gained a fundamental insight about the origins of such ecosystem complexity He realized that when subgroups of the same species inhabit even slightly different ecosystems these subgroups will evolve in diverging directions This divergent evolution is primarily driven by interactions with the many other species in each ecosystem which are themselves evolving in different directions in the different ecosystems We explore how this subtle and fascinating concept lies at the heart of the evolutionary ferment that powers ecosystem diversity and resilience the bubbling evolutionary cauldrons of the book s title This ferment pervades ecosystems but it is especially active in their microorganism communities We then examine the evolutionary forces that power these cauldrons starting with between species interactions and tunnelling down to their causes Using real world examples we explore how the technologies available for measuring these changes are increasing exponentially in precision and scope We show how this deluge of new genetic and environmental information can be used to protect and restore a wide variety of damaged ecosystems Ecosystems have survived dramatic changes in the past often becoming even more wondrous and diverse than before We are now learning how this happens and how we can preserve this astounding ability

DNA Witnessed God's Creation Victor W Chang , Guoping Song,2020-07-04 Who are we Where are we from These questions have troubled people for centuries Textbooks have long taught us that humans evolved from apes Today a new science Molecular Anthropology tells us that nearly 7 billion humans in the world share a common grand grand father the Y chromosome Adam And they also share a common grand grand mother the Mitochondrial Eve The difference in DNA coding is only one thousandth between any persons in the world After reading this book you will be convinced that humans could not have been the result of Evolution In 1987 Professor Allan Wilson's research team at UC Berkeley proposed the Mitochondrial Eve Theory by DNA coding that all humans originated from one woman who lived about 200 000 years ago In 1995 Drs Dorit et al proposed the Adam Theory by DNA coding of Y Chromosomal that all humans originated from one man There are two kinds of DNA encoding in our body chromosomal DNA and mitochondrial DNA The chromosome consists of three types autosome Y chromosome and X chromosome The Eve Theory is founded on the mitochondrial DNA while the Adam Theory is founded on the Y chromosome So what can we see from the autosome The simple biological fact that there are no differences between the autosomes of male and female tells us a striking truth that is the autosome of all men in the world must come from only one original version and cannot be produced randomly Therefore the authors of this book have established a The only one Adam theory by the consistency of autosomal DNA coding of men and women All human beings on earth came from him and the earliest female ancestor came from this male ancestor In addition we also provide you with an answer which science cannot offer Creationism

A Conspiracy of Cells Michael Gold,1986-01-01 A Conspiracy of Cells presents the first full account of one of medical science s more bizarre and costly mistakes On October 4 1951 a young black woman named Henrietta Lacks died of cervical cancer That is most of Henrietta Lacks died In a laboratory dish at the Johns Hopkins Medical Center in Baltimore a few cells taken from her fatal tumor continued to live to thrive in fact For reasons unknown her cells code named HeLa grew more vigorously than any other cells in culture at the time Long time science reporter Michael Gold describes in graphic detail how the errant HeLa cells spread contaminating and overwhelming other cell cultures sabotaging research projects and eluding detection until they had managed to infiltrate scientific laboratories worldwide He tracks the efforts of geneticist Walter Nelson Rees to alert a sceptical scientific community to the rampant HeLa contamination And he reconstructs Nelson Rees s crusade to expose the embarrassing mistakes and bogus conclusions of researchers who unknowingly abetted HeLa s spread

Visualization of Nucleic Acids Gerard Morel,1995-03-30 This book presents a review of the principle approaches for visualizing DNA and RNA Using scanning tunneling and atomic force microscopes the three dimensional image of the surface of nucleic acids can be seen at atomic scale resolutions Spreading methods provide useful details on structural features of isolated molecules but the major constituent of living matter is water and the cryomicroscope makes it possible to look at DNA in its aqueous environment Genes can be detected simultaneously in situ in chromosomes using fluorescent probes and also at the electron microscopic level In cells nucleic acids are localized and quantified by dyes electron microscopy is used with cytochemical immunocytological nuclease and in situ hybridization methods The main potential applications for pathological studies are shown with particular aspects such as viral nucleic acids and in situ PCR

DNA Repair Protocols Daryl S. Henderson,2008-02-03 The first edition of this book published in 1999 and called DNA Repair Protocols Eukaryotic Systems brought together laboratory based methods for studying DNA damage and repair in diverse eukaryotes namely two kinds of yeast a nematode a fruit fly a toad three different plants and human and murine cells This second edition of DNA Repair Protocols covers mammalian cells only and hence its new subtitle Mammalian

Systems There are two reasons for this fresh emphasis both of them pragmatic to cater to the interests of what is now a largely mammalocentric DNA repair field and to expedite editing and production of this volume Although DNA Repair Protocols Mammalian Systems is a smaller book than its predecessor it actually contains a greater variety of methods Fourteen of the book's thirty two chapters are entirely new and areas of redundancy present in the first edition have been eliminated here for example now just two chapters describe assays for nucleotide excision repair NER rather than seven All eighteen returning chapters have been revised many of them extensively In order to maintain a coherent arrangement of topics the four part partitioning seen in the first edition was dispensed with and chapters concerned with ionizing radiation damage and DNA strand breakage and repair were recated to near the front of the book Finally an abstract now heads each chapter

Advances in Biological and Medical Physics John H. Lawrence,John W. Gofman,2013-10-22 Advances in Biological and Medical Physics Volume 13 covers articles on the advances in biological and medical physics The book presents papers on the solid state physics of electron and ion transport in biology on microelectrophoretic studies on the surface chemistry of erythrocytes and on a specific common chromosomal pathway for

the origin of human malignancy including an evaluation of long term human hazards of potential environmental carcinogens The text then discusses the instantaneous radiation levels at different altitudes and latitudes the accumulated radiation exposures to crew members and passengers and the resulting radiation burden to the entire population The theory and practical application of the selective destruction of cell organelles by laser beam as well as some aspects of radiation effects on cell membranes are also considered The book further tackles the effects of radiation on artificial lipid membranes the role of bacterial membranes in radiosensitization and the effects of ionizing radiation on lysosomes and other intracellular membranes The text also describes the high oxygen effect for the release of enzymes from isolated mammalian lysosomes after treatment with ionizing radiation as well as the effects of ultraviolet and visible light on nerve fibers and changes in optical properties during nervous activity The effects of ultraviolet radiation on isolated nerve fibers are also looked into Biological and medical physicists and students taking these courses will find the book invaluable
