from Spinoza's geometrical diagrams to his concepts of mind/body, the emotions and the cosmos **Our Religious Brains**

Rabbi Ralph D. Mecklenberger, 2012-02-15 A Revolution in Human Self Understanding Is Underway What Does It Mean for Religion and Our Belief in God The brain and consciousness are themselves awe inspiring So learning about them no more undermines religion than learning about how symphonies and paintings are crafted takes away from our appreciation of music and art Science alone does not provide the ultimate answers or firmly rooted values for which we yearn But religion alone does not have all the answers either We are blessed as moderns with both from the Introduction This is a groundbreaking accessible look at the implications of cognitive science for religion and theology intended for laypeople Avoiding neurological jargon and respectful to all faiths it examines Current theory on how our brains construct our world in order to guide us safely through life creating and appreciating meaning as we go What religious experience is as it plays out in our brains How modern science challenges historic ideas about free will and undermines the religious concept of the soul as a meta physical entity separable from the body What cognitive science reveals about our need for community Why we should be loyal to one faith if in fact all major religious traditions deal effectively with universal human needs **No More**

Letting Go Debra Jay, 2007-12-18 Detachment has been the standard message of most addiction literature for the last twenty years The conventional wisdom offered to an addict's loved ones has been to let the addict hit bottom before intervening Now intervention specialist Debra Jay challenges this belief and offers a bold new approach to treating addiction that provides a practical and spiritual lifeline to families struggling with alcohol or drug abuse In No More Letting Go Jay argues that the traditional advice of letting go too often destroys both the addict and the family physically emotionally and spiritually Jay contends that addiction is everybody's business not just the addict's and addiction doesn't have the right to trump the welfare of a family In short highly accessible chapters written with warmth understanding and compassion Jay weaves together philosophical and religious thought new science on the brain function of an addict the physical and psychological impact of addiction on family members and poignant real life family stories No More Letting Go is a powerful informative guide that provides comfort hope and practical advice to anyone affected by a family member's addiction **Raul Ruiz's**

The Meaning of the Body Mark Johnson, 2024-05-31 Demonstrates that the aesthetic and emotional aspects of meaning are fundamental and that the arts show meaning making in its fullest realization

George Lakoff author of *Moral Politics* In *The Meaning of the Body* Mark Johnson continues his pioneering work on the exciting connections between cognitive science language and meaning first begun in the classic *Metaphors We Live By* Johnson uses recent research into infant psychology to show how the body generates meaning even before self consciousness has fully developed From there he turns to cognitive neuroscience to further explore the bodily origins of meaning thought and language and examines the many dimensions of meaning including images qualities emotions and metaphors that are all rooted in the body's physical encounters with the world Drawing on the psychology of art and pragmatist philosophy Johnson argues that all of these aspects of meaning making are fundamentally aesthetic He concludes that the arts are the culmination of human attempts to find meaning and that studying the aesthetic dimensions of our experience is crucial to unlocking meaning's bodily sources Throughout Johnson puts forth a bold new conception of the mind rooted in the understanding that philosophy will matter to non philosophers only if it is built on a visceral connection to the world A courageous and ultimately successful book Lucas Keefer *Metapsychology* A cutting edge treatise reflecting the newest developments on the mind body and mind world problems and properly places aesthetics center stage in the study of meaning and understanding Raymond W Gibbs Jr author of *Embodiment and Cognitive Science* Energetically argued clearly written well structured admirably wide ranging and impressively well informed Richard Marc Shusterman author of *Body Consciousness* *A Philosophy of Mindfulness and Somaesthetics* *Motivational Immediacy in the Workplace* Jonathan E. Taylor, 2022-05-02 Learners are always motivated they just may not be motivated to learn the things you are wanting them to learn *Motivational Immediacy* refers to the moment by moment motivation of learners during a learning event This is in contrast to typical global views of motivation and while casting a much heavier burden on the instructor brings with it more deep meaningful and permanent learning *Motivational Immediacy in the Workplace* focuses not only on fostering learner engagement with a primary emphasis on the role of the instructor but also addresses the work and concerns of curriculum writers and training directors The author defines *Motivational Immediacy* as both a phenomenon and a practice and provides concrete steps for practical action *Motivational Immediacy* as a construct refers to a moment by moment feeling of motivation on the part of the learner to engage in the learning opportunity directly at hand As a practice it is the instructor's process of working to stay connected with individual learners and foster engagement consistently at every moment of the teaching activity The author addresses this idea from a learner centered orientation making the case that understanding and empathizing with the learner's perceptions is the most effective way to promote efficient meaningful learning The book will provide a comprehensive conceptualization of learning engagement and learning resistance It begins with a substantial theoretical framework and then shifts to direct applications to practice in the workplace *Motivational Immediacy* is multidisciplinary and draws from fields such as Adult Education Workplace and Training Development Psychology Educational Psychology Sociology Cultural Anthropology and Communications *Jane on the Brain* Wendy Jones, 2017-12-05

An Austen scholar and therapist reveals Jane Austen's intuitive ability to imbue her characters with hallmarks of social intelligence and how these beloved works of literature can further illuminate the mind-brain connection. Why is Jane Austen so phenomenally popular? Why do we read *Pride and Prejudice* again and again? Why do we delight in Emma's mischievous schemes? Why do we care that Anne Elliot of *Persuasion* suffers? We care because it is our biological destiny to be interested in people and their stories: the human brain is a social brain, and Austen's characters are so believable that for many of us they are not just imaginary beings but friends whom we know and love. And thanks to Austen's ability to capture the breadth and depth of human psychology so thoroughly we feel that she empathizes with us. Humans have a profound need for empathy to know that we are not alone with our joys and sorrows. We see ourselves and others reflected in Austen's work. Social intelligence is one of the most highly developed human traits when compared with other animals. How did it evolve? Why is it so valuable? Wendy Jones explores the many facets of social intelligence and juxtaposes them with the Austen canon. Brilliantly original and insightful, this fusion of psychology, neuroscience, and literature provides a heightened understanding of one of our most beloved cultural institutions and our own minds. *Self and Emotional Life* Adrian Johnston, Catherine Malabou, 2013-06-04. Adrian Johnston and Catherine Malabou defy theoretical humanities' deeply entrenched resistance to engagements with the life sciences. Rather than treat biology and its branches as hopelessly reductive and politically suspect, they view recent advances in neurobiology and its adjacent scientific fields as providing crucial catalysts to a radical rethinking of subjectivity. Merging three distinct disciplines: European philosophy from Descartes to the present, Freudian/Lacanian psychoanalysis, and affective neuroscience, Johnston and Malabou triangulate the emotional life of affective subjects as conceptualized in philosophy and psychoanalysis with neuroscience. Their experiments yield different outcomes. Johnston finds psychoanalysis and neurobiology have the potential to enrich each other, though affective neuroscience demands a reconsideration of whether affects can be unconscious. Investigating this vexed issue has profound implications for theoretical and practical analysis as well as philosophical understandings of the emotions. Malabou believes scientific explorations of the brain seriously problematize established notions of affective subjectivity in Continental philosophy and Freudian/Lacanian analysis. She confronts philosophy and psychoanalysis with something neither field has seriously considered: the concept of wonder and the cold, disturbing visage of those who have been affected by disease or injury such that they are no longer affected emotionally. At stake in this exchange are some of philosophy's most important claims concerning the relationship between the subjective mind and the objective body, the structures and dynamics of the unconscious dimensions of mental life, the role emotion plays in making us human, and the functional differences between philosophy and science. *3-System Theory of the Cognitive Brain* Olivier Houdé, 2019-01-18. *3-System Theory of the Cognitive Brain*. A Post-Piagetian Approach to Cognitive Development puts forward Olivier Houdé's 3-System theory of the cognitive brain based on numerous post-Piagetian psychological and brain imaging data acquired from children and adults.

This ground breaking theory simultaneously anchors itself in a deep understanding of the history of psychology and fuels current debates on thinking reasoning and cognitive development Spanning the long term history of psychology from Plato and Aristotle to more current experimental psychology this pioneering work goes beyond the approaches of Kahneman i e System 1 theory and Piaget i e System 2 theory to put forward a theory in which the inhibitory control system i e System 3 takes precedence Houd argues that the brain contains a third control system located in the prefrontal cortex which is dedicated to inhibiting Kahneman s intuitive heuristics system and activating Piaget s logical algorithms system anywhere in the brain on a case by case basis depending on the goal and context of the task 3 System Theory of the Cognitive Brain simultaneously explains the early logical abilities discovered in babies the dynamic strategic and non linear process of cognitive development in children and the fast heuristics and biases observed in adults Houd considers the exciting implications of this theory on neuro education using examples from the classroom This book is essential reading for students and researchers in cognitive development and education child psychology reasoning and neurosciences
