Fighting for the Future of Food Rachel Schurman, William A. Munro, 2013-11-30 When scientists working in the agricultural biotechnology industry first altered the genetic material of one organism by introducing genes from an entirely different organism the reaction was generally enthusiastic To many these genetically modified organisms GMOs promised to solve the challenges faced by farmers and to relieve world hunger Yet within a decade this gene revolution had abruptly stalled Widespread protests against the potential dangers of Frankenfoods and the patenting of seed supplies in the developing world forced the industry to change course As a result in the late 1990s some of the world s largest firms reduced their investment in the agricultural sector narrowed their focus to a few select crops or sold off their agricultural divisions altogether *Fighting for the Future of Food* tells the story of how a small group of social activists working together across tables continents and the Internet took on the biotech industry and achieved stunning success Rachel Schurman and William A Munro detail how the anti biotech movement managed to alter public perceptions about GMOs and close markets to such products Drawing strength from an alternative worldview that sustained its members sense of urgency and commitment the anti GMO movement exploited political opportunities created by the organization and culture of the biotechnology industry itself *Fighting for the Future of Food* ultimately addresses society s understanding and trust or mistrust of technological innovation and the complexities of the global agricultural system that provides our food

Structure, Agency and

Biotechnology Aristeidis Panagiotou, 2017-07-03 Structure Agency and Biotechnology argues for the significance of sociological theory and highlights the insights it can offer to the study of agricultural biotechnology Cautioning against a simplistic reading of the GM controversy as merely a debate of science versus politics Aristeidis Panagiotou suggests that the discussion should be embedded in the wider social political economic and cultural contexts Structure Agency and Biotechnology assesses the 2012 Rothamsted GM wheat trials and proposes that the tension underlying GM technology should be resolved through sustained dialogue public involvement and broad scientific consensus The Hope, Hype & Reality of Genetic Engineering John C. Avise, 2004 If you want to know more about the transgenic items on your dinner table how barnyard animals are being cloned for pharmaceuticals and foods how wild creatures from mosquitoes to endangered species are being genetically modified or what genetic engineering holds for the future of medicine and the human species you need to read this book Jacket GM Crops and the Global Divide Jennifer Thomson, 2021-01-20 Attitudes to GM crops continue to generate tension even though they have been grown commercially for over 20 years Negative sentiment towards their development limits their adoption in Western countries despite there being no evidence of harm to human health These unfounded concerns about genetically modified crops have also inhibited uptake in many countries throughout Africa and Asia having a major impact on agricultural productivity and preventing the widespread cultivation of potentially life saving crops GM Crops and the Global Divide traces the historical importance that European attitudes to past colonial influences aid trade and educational involvement have had on African leaders and their people The detrimental impact that these attitudes have on agricultural productivity and food security continues to be of growing importance especially in light of climate change drought and the potential rise in sea levels the effects of which could be mitigated by the cultivation of GM and gene edited crops Following on from her previous books *Genes for Africa* *GM Crops The Impact and the Potential* and *Food for Africa* Jennifer Thomson unravels the reasons behind these negative attitudes towards GM crop production By addressing the detrimental effects that anti GM opinions have on nutrition security in developing countries and providing a clear account of the science to counter these attitudes she hopes to highlight and ultimately bridge this global divide *EU Policy-Making on GMOs* Mihalis Kritikos, 2017-11-02 This book examines the development and implementation of the EU's legislative framework on the commercial release of GMO products as a case study of social regulation operating within a predominantly technical framework The analysis and findings are based on an extensive documentary analysis and interviews with regulators risk assessors public interest groups and biotechnology experts at the national and European levels It argues that in the case of the EU biotechnology framework the particular institutional settings created for the formulation and interpretation of its provisions have been of decisive importance in elaborating a proceduralised science based prior authorization scheme as the preferred framework for granting commercial permits This interdisciplinary work will appeal to EU lawyers decision makers and risk managers as well as academics working in the fields of EU studies politics law risk

governance sociology of science risk and technology assessment The book is based on a PhD thesis that was awarded with the 2008 UACES Prize for the Best Thesis in European Studies in Europe and with the EPEES 1st Prize for the Best Thesis written by a Greek Researcher between 2004 and 2008

Seeds of Science Mark Lynas, 2018-04-05 Fluent persuasive and surely right Evening Standard The inside story of the fight for and against genetic modification in food Mark Lynas was one of the original GM field wreckers Back in the 1990s working undercover with his colleagues in the environmental movement he would descend on trial sites of genetically modified crops at night and hack them to pieces Two decades later most people around the world from New York to China still think that GMO foods are bad for their health or likely to damage the environment But Mark has changed his mind This book explains why In 2013 in a world famous recantation speech Mark apologised for having destroyed GM crops He spent the subsequent years touring Africa and Asia and working with plant scientists who are using this technology to help smallholder farmers in developing countries cope better with pests diseases and droughts This book lifts the lid on the anti GMO craze and shows how science was left by the wayside as a wave of public hysteria swept the world Mark takes us back to the origins of the technology and introduces the scientific pioneers who invented it He explains what led him to question his earlier assumptions about GM food and talks to both sides of this fractious debate to see what still motivates worldwide opposition today In the process he asks and answers the killer question how did we all get it so wrong on GMOs An important contribution to an issue with enormous potential for benefiting humanity Stephen Pinker I warmly recommend it Philip Pullman

GM Food on Trial Les Levidow, Susan Carr, 2009-12-04 Europe was told that it had no choice but to accept agbiotech yet this imperative was turned into a test of democratic accountability for societal choices Since the late 1990s European public controversy has kept the agri biotech industry and its promoters on the defensive As some opponents and regulators alike have declared GM food crops are on trial Suspicion of their guilt has been evoked by moral symbols as disputes over whether genetically modified products are modest benign improvements on traditional plant breeding or dangerous Frankenfoods and in disputes over whether they are global saviours or control agents of multinational companies This book examines European institutions being put on trial for how their regulatory procedures evaluate and regulate GM products in ways which opened up alternative futures Levidow and Carr highlight how public controversy created a legitimacy crisis leading to national policy changes and demands in turn stimulating changes in EU agbiotech regulations as a strategy to regain legitimacy

Technology and Oligopoly Capitalism Luis Suarez-Villa, 2023-04-14 Technology and Oligopoly Capitalism is a major contribution to our understanding of how technology oligopolies are shaping America's social economic and political reality Technology oligopolies are the most powerful socioeconomic entities in America From cradle to grave the decisions they make affect the most intimate aspects of our lives how we work what we eat our health how we communicate what we know and believe whom we elect and how we relate to one another and to nature Their power over markets trade regulation and most every aspect of our governance is more intrusive and farther reaching than ever They benefit from tax breaks government guarantees and bailouts that we must pay for and have no control over Their accumulation of capital creates immense wealth for a minuscule elite deepening disparities while politics and governance become ever more subservient to their power They determine our skills and transform employment through the tools and services they create as no other organizations can They produce a vast array of goods and services with labor marketing and research that are more intrusively controlled than ever as workplace rights and job security are curtailed or disappear Our consumption of their products and their capacity to promote wants is deep and far reaching while the waste they generate raises concerns about the survival of life on our planet And their links to geopolitics and the martial domain are stronger than ever as they influence how warfare is waged and who will be vanquished Technology and Oligopoly Capitalism's critical multidisciplinary perspective provides a systemic vision of how oligopolistic power shapes these forces and phenomena An inclusive approach spans the spectrum of technology oligopolies and the ways in which they deploy their power Numerous previously unpublished ideas expand the repertory of established work on the topics covered advancing explanatory quality to elucidate how and why technology oligopolies operate as they do the dysfunctions that accompany their power and their effects on society and nature This book has no peers in the literature in its scope the unprecedented amount and diversity of documentation the breadth of concepts and the vast number of examples it provides Its premises deserve to be taken into account by every student researcher policymaker and author interested in the socioeconomic and political dimensions of technology in America

The Political Theories of Risk Analysis Nicholas P. Guehlstorf,2012-11-03 The purpose of this study is to question whether liberal political theories ought to inform the way policymakers and administrators analyze risk in proposed courses of environmental practice In order to explore the relationship of liberal theory to rational practice in environmental policy this project examines the risk analysis used to approve the genetically engineered bovine growth hormone in American agricultural policy The Political Theories of Risk Analysis suggests that American environmental public policy is attempting to assess danger with an incomplete notion of utility to eliminate the hazards of society with an inadequate contractual justification of political authority and to publicly debate accepted levels of risk with an unfulfilled critical social theory Because environmental risk analyses are incorrectly perceived as technically rational and socially apolitical they result in practices that are muddled and misdirected Making theoretical foundations explicit however could lead to improved practice Public policy and administrative decisions regarding agricultural biotechnologies should and can function with more concern for democratic values The Political Theories of Risk Analysis is for environmental scientists philosophers public policy planners applied ethicists political scientists and environmentalists
