Treasure Lost at Sea Robert F. Marx,Jenifer Marx,2004 The vast hidden world of sunken treasure With less than 2% of the world s ocean depths explored to date a myriad of unimagined mysteries and treasures await discovery Treasure Lost at Sea chronicles the excitement of underwater archaeology and search for treasure The book recounts the major periods and geographic locations of shipwrecks Chapters include The classical world Scandinavian shipwrecks The age of discovery The Spanish galleons Bermuda graveyard of ships Privateers pirates and mutineers Deep water shipwrecks Bismarck Titanic and others Port Royal The sunken city The lively text details the potential treasure as well as the political turf wars technological limitations and forces of nature that threaten any mission s success Humanity s long history of exploration civilization trade and war is littered with sunken vessels Colorful and richly illustrated Treasure Lost at Sea will inspire a new generation of underwater archaeologists **Making One's Way in the World** Martin Bell,2020-02-28 The book draws on the evidence of landscape archaeology palaeoenvironmental studies ethnohistory and animal tracking to address the neglected topic of how we identify and interpret past patterns of movement in the landscape It challenges the pessimism of previous generations which regarded prehistoric routes such as hollow ways as generally undatable The premise is that archaeologists tend to focus on sites while neglecting the patterns of habitual movement that made them part of living landscapes Evidence of past movement is considered in a multi scalar way from the individual footprint to the long distance path including the traces created in vegetation by animal and human movement It is argued that routes may be perpetuated over long timescales creating landscape structures which influence the activities of subsequent generations In other instances radical changes of axes of communication and landscape structures provide evidence of upheaval and social change Palaeoenvironmental and ethnohistorical evidence from the American North West coast sets the scene with evidence for the effects of burning animal movement faeces deposition and transplantation which can create readable routes along which are favoured resources Evidence from European hunter gatherer sites hints at similar practices of niche construction on a range of spatial scales On a local scale footprints help to establish axes of movement the locations of lost settlements and activity areas Wood trackways likewise provide evidence of favoured patterns of movement and past settlement location Among early farming communities alignments of burial mounds enclosure entrances and other monuments indicate axes of communication From the middle Bronze Age in Europe there is more clearly defined evidence of trackways flanked by ditches and fields Landscape

scale survey and excavation enables the dating of trackways using spatial relationships with dated features and many examples indicate long term continuity of routeways Where fields flank routeways a range of methods including scientific approaches provide dates Prehistorians have often assumed that Ridgeways provided the main axes of early movement but there is little evidence for their early origins and rather better evidence for early routes crossing topography and providing connections between different environmental zones The book concludes with a case study of the Weald of South East England which demonstrates that some axes of cross topographic movement used as droveways and generally considered as early medieval can be shown to be of prehistoric origin One reason that dryland routes have proved difficult to recognise is that insufficient attention has been paid to the parts played by riverine and maritime longer distance communication It is argued that understanding the origins of the paths we use today contributes to appreciation of the distinctive qualities of landscapes Appreciation will help to bring about effective strategies for conservation of mutual benefit to people and wildlife by maintaining and enhancing corridors of connectivity between different landscape zones including fragmented nature reserves and valued places In these ways an understanding of past routeways can contribute to sustainable landscapes communities and quality of life
