Destructive Water George H. Leavesley, 1997 **Sustainability of Water Resources Under Increasing Uncertainty** International Association of Hydrological Sciences. Scientific Assembly, 1997 **Environmental Flow Assessment** John G. Williams, Peter B. Moyle, J. Angus Webb, G. Mathias Kondolf, 2019-03-26 Provides critiques of current practices for environmental flow assessment and shows how they can be improved using case studies In Environmental Flow Assessment Methods and Applications four leading experts critique methods used to manage flows in regulated streams and rivers to balance environmental instream and out of stream uses of water Intended for managers as well as practitioners the book dissects the shortcomings of commonly used approaches and offers practical advice for selecting and implementing better ones The authors argue that methods for environmental flow assessment EFA can be defensible as well as practicable only if they squarely address uncertainty and provide guidance for doing so Introductory chapters describe the scientific and social reasons that EFA is hard and provide a brief history Because management of regulated streams starts with understanding freshwater ecosystems Environmental Flow Assessment Methods and Applications includes chapters on flow and organisms in streams The following chapters assess standard and emerging methods how they should be tested and how they should or should not be applied The book concludes with practical recommendations for implementing environmental flow assessment Describes historical and recent trends in environmental flow assessment Directly addresses practical difficulties with applying a scientifically informed approach in contentious circumstances Serves as an effective introduction to the relevant literature with many references to articles in related scientific fields Pays close attention to statistical issues such as sampling estimation of statistical uncertainty and model selection Includes recommendations for methods and approaches Examines how methods have been tested in the past and shows how they should be tested today and in the future Environmental Flow Assessment Methods and Applications is an excellent book for biologists and specialists in allied fields such as engineering ecology fluvial geomorphology environmental planning landscape architecture along with river

managers and decision makers **Current Practice in Fluvial Geomorphology** Krishna Gopal Ghosh, Sutapa Mukhopadhyay, 2020-01-08 Amid increasing interactions with other disciplines and technical advances for detecting monitoring and modeling fluvial landscape origin dynamics and diversity a number of scientific works have come out and nested in globally recognized edited books This book is an attempt in this regard where a few precise regular research works from diverse disciplinary expertise from around the globe are compiled as chapters In this collective effort the application of geoinformatics field data on natural rivers instrumentation use of analytic tools scientific techniques numerical models case studies illustrations etc in understanding formative processes and appraising fluvial landscapes will hopefully provide insight into the current practice of fluvial geomorphology and may guide fruitful and coherent scientific enquiry into the field

Ice and Global Warming in Cryosphere Regions Nelay Khare, 2024-03-21 Polar Ice and Global Warming in Cryosphere Regions is based on recent and past climate variabilities data gathered through satellites and spatial temporal analysis to explain the role of global warming on cryosphere regions such as high latitude Himalaya Arctic and Antarctic regions and the surrounding Southern Ocean and Arctic Ocean Through several case studies the book describes the atmospheric processes and their interactions with high latitude regions toward a better understanding of climate variability Understanding cryosphere regions helps readers develop plausible models for disaster risk management and policy on different polar events

Features Presents a thorough review on climate variability over the Southern Ocean and Antarctica and the impact of climate variability and global warming on cryosphere regions Explains how the inferred climatological environmental conditions using natural archives may shed light on climate scenarios in cryosphere regions Includes case studies on globally connected geoscientific phenomena in the Himalayan Arctic and Antarctic regions Discusses the use of natural archives to explain the current climate scenario in the cryosphere regions Intended for researchers academics and graduate students following oceanography meteorology or environmental studies and those working on projects related to climate change in governmental organizations institutions and global NGOs this book outlines ways in which readers can initiate plans and policies to help mitigate the effects of global warming in these regions

New Publications of the U.S. Geological Survey ,2000 **Life Cycle Assessment of Energy Systems** Nicholas Sakellariou,2018-05-04 This groundbreaking work is the most in depth and state of the art study on the Life Cycle Assessment LCA of energy systems the only volume available on this critical subject Energy and sustainability are two of the most important and often most misunderstood subjects in our world today As these two subjects have grown in importance over the last few decades interest in the Life Cycle Assessment LCA model has grown as well as a potentially crucial tool in understanding and striving towards sustainability in energy systems Not just wind and solar systems but all energy systems need to be understood through this model Wind and solar power have the potential to decentralize the U S energy system by offering local communities electricity and economic support depending on the scale and design of projects Nevertheless every energy technology potentially faces environmental costs lay and expert opposition and risks to public health Engineers play a central role as designers builders and operators in energy systems As they extend their expertise into electrical mechanical and chemical fields from fossil fuel based systems to renewable energy systems sustainability is steadily becoming one of the key criteria engineers apply in their work This groundbreaking new study argues that engineering cultures foster sustainability by adopting assumptions and problem solving practices as part of their identities when designing and building engineering projects This work examines the politics of creating utilizing and modifying Life Cycle Assessment LCA in the construction of renewable energy systems The only volume of its kind ever written it is a must have for any engineer scientist manager or other professional working in or interested in Life Cycle Assessment and its relation to energy systems and impact on environmental and economic sustainability

Developing an Impact-Based Combined Drought Index for Monitoring Crop Yield Anomalies in the Upper Blue Nile Basin, Ethiopia Yared A. Bayissa,2018-10-26 Having a robust drought monitoring system for Ethiopia is crucial to mitigate the adverse impacts of droughts Yet such monitoring system still lacks in Ethiopia and in the Upper Blue Nile UBN basin in particular Several drought indices exist to monitor drought however these indices are unable individually to provide concise information on the occurrence of meteorological agricultural and hydrological droughts A combined drought index CDI using several meteorological agricultural and hydrological drought indices can indicate the occurrence of

all drought types and can provide information that facilitates the drought management decision making process This thesis proposes an impact based combined drought index CDI and a regression prediction model of crop yield anomalies for the UBN basin The impact based CDI is defined as a drought index that optimally combines the information embedded in other drought indices for monitoring a certain impact of drought i e crop yield for the UBN The developed CDI and the regression model have shown to be effective in indicating historic drought events in UBN basin The impact based CDI could potentially be used in the future development of drought monitoring in the UBN basin and support decision making in order to mitigate adverse drought impacts

Guidelines for Native Seed Production and Grassland Restoration Kathrin Kiehl, Anita Kirmer, Nancy Shaw, 2014-06-19 World wide the degradation and destruction of both natural and traditionally used semi natural ecosystems is drastically increasing Unfortunately commercial seed mixtures consisting of non native species and genetically uniform cultivars are widely used in grassland restoration often with negative effects on biodiversity Therefore native species should be used in the ecological restoration of natural and semi natural vegetation This book compiles results from recent studies presented at a Special Session Native seed production and use in restoration projects which was organised during the 8th European Conference on Ecological Restoration in esk Bud jovice Czech Republic The authors review the ecological and genetic aspects of seed propagation and species introduction both from a European and an American perspective and discuss implications for the development of seed zones and for native seed production Examples from different countries focus on native seed production in practice and suggest different approaches for the certification of seed provenance Best practice examples from Europe and the United States are used to indicate the advantages of using native seeds for ecological restoration of grasslands field margins and sagebrush steppe Finally this volume also provides guidelines for the successful implementation of restoration projects for local authorities landscape planners and NGOs in order to bridge gaps between research and practice

Assessment of the Performance of Engineered Waste Containment Barriers National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee to Assess the Performance of Engineered Barriers, 2007-09-22 President Carter s 1980 declaration of a state of emergency at Love Canal New York recognized that residents health had been affected by nearby chemical waste sites The Resource Conservation and Recovery Act enacted in 1976 ushered in a new era of waste management disposal designed to protect the public from harm It required that modern waste containment systems use engineered barriers designed to isolate hazardous and toxic wastes and prevent them from seeping into the environment These containment systems are now employed at thousands of waste sites around the United States and their effectiveness must be continually monitored Assessment of the Performance of Engineered Waste Containment Barriers assesses the performance of waste containment barriers to date Existing data suggest that waste containment systems with liners and covers when constructed and maintained in accordance with current regulations are performing well thus far However they have not been in existence long enough to

assess long term postclosure performance which may extend for hundreds of years The book makes recommendations on how to improve future assessments and increase confidence in predictions of barrier system performance which will be of interest to policy makers environmental interest groups industrial waste producers and industrial waste management industry Stream Stability and Scour at Highway Bridges Everett V.
