North Atlantic Palaeoceanography:

North Atlantic Palaeoceanography C. P. Summerhayes, N. J. Shackleton, Geological Society of London, 1986 *Late Quaternary Palaeoceanography of the North Atlantic Margins* John T. Andrews, 1996 The focus of this book is on oceanic climate change during the last deglaciation period and the high temporal resolution that can be obtained from sediment records at continental margin sites The book draws together papers from the north eastern North American continental margin with those from the north west European Arctic and the Arctic and North Atlantic Oceans **Marine Geology and Palaeoceanography** Berggren, Wang Pingxian, 2020-04-22 This volume presents the proceedings of Symposium on Marine Geology and Palaeoceanography of the 30th International Geological Congress at Beijing The proceedings aim to present a view of contemporary marine geology and should be of interest to researchers in the geological science **Economic and Palaeoceanographic Significance of Contourite Deposits** Geological Society of London, 2007 There has lately been a growth in the number and level of studies of contourite deposits Most recent studies of contourites have two major lines of interest One propelled by the oil industry's continuous move into increasingly deep waters concerns their economic significance The other involves the stratigraphic palaeoceanographic record of ocean circulation changes imprinted on contourite deposits that can be a key to understanding better the climate ocean connection The application of many different theoretical experimental and empirical resources provided by geophysics sedimentology geochemistry petrology scale modeling and field geology are used in the 16 papers of this volume proposing answers to those two main aspects The papers are subdivided into two major categories economic interest and stratigraphic palaeoceanographic significance with case studies ranging from well documented drifts to new examples of modern and fossil series involving a large diversity of geographic and physiographic scenarios worldwide *Western North Atlantic Palaeogene and Cretaceous Palaeoceanography* Geological Society of London, 2001 Palaeogene and Cretaceous palaeoceanography has been the focus of intense international interest in the last few years spurred by deep ocean drilling at Blake Nose in the North Atlantic as well as the need to use past climate change as input for modelling future climate change This book brings together a number of review papers that describe ancient oceans and unique events in the Earth's climatic history and evolution of biota The papers show evidence of periods characterized by exceptional global warmth such as the Late Palaeocene Thermal Maximum and Cretaceous anoxic events Geochemical records and modelling will make the reader aware that these periods were forced by greenhouse gases *North Atlantic Holocene Palaeoceanography* Christopher Robert William Ellison, 2006 Geology of North America—An Overview Albert W. Bally, Allison R. Palmer, 1989 Summaries of the major features of the geology of North America and the adjacent oceanic regions are presented in 20 chapters Topics covered include concise reviews of current thinking about Precambrian basement Phanerozoic orogens cratonic basins passive margin geology of the Atlantic and Gulf Coast regions marine and terrestrial geology of the Caribbean region and economic geology Biological and

Geological Perspectives of Dinoflagellates F. Marret, J.M. Lewis, L.R. Bradley, 2013-12-04 This volume provides an overview of current research on fossil and modern dinoflagellates as well as highlighting research areas for future collaboration following the DINO9 International Conference in Liverpool The volume is organized into four themes with a review paper for each theme written by the key note speaker Each theme also includes a future research foci note following discussion during the conference The contributions are organized into the following sections environmental change ecology palaeoecology life cycles and diversity and stratigraphy and evolution Also included are notes from two workshops culture experiments and dinocysts as palaeoceanographic tracers This volume will be of interest to both the biological and micropalaeontological communities

The Tethys Ocean Alan E.M. Nairn, Luc-Emmanuel Ricou, Bruno Vrielynck, Jean Dercourt, 2013-11-11 A voluminous encyclopedia of Tethyan geology and as such it provides an invaluable source of information for those interested in this region and Earth history in general The book is a must for the libraries of universities and geologic institutions Palaios October 1997 Volume 8 focuses on the Tethys oceanic realm and introduces new concepts such as transit plates and seules lithospheriques Contributors include new guides to understanding the distribution of Tethyan mineral and organic resources and present insights into the role of carbonate platforms Chapters are abundant with maps and illustrations

Proceedings of the Ocean Drilling Program Ocean Drilling Program, 1995

Coccolithophores Hans R. Thierstein, Jeremy R. Young, 2004-07-07 This introduction to one of the most common phytoplankton types provides broad coverage from molecular and cellular biology all the way to its impact on the global carbon cycle and climate Individual chapters focus on coccolithophore biology ecology evolutionary phylogeny and impact on current and past global changes The book addresses fundamental questions about the interaction between the biota and the environment at various temporal and spatial scales

Deep Marine Systems Kevin T. Pickering, Richard N. Hiscott, 2015-10-23 Deep water below wave base processes although generally hidden from view shape the sedimentary record of more than 65% of the Earth's surface including large parts of ancient mountain belts This book aims to inform advanced level undergraduate and postgraduate students and professional Earth scientists with interests in physical oceanography and hydrocarbon exploration and production about many of the important physical aspects of deep water mainly deep marine systems The authors consider transport and deposition in the deep sea trace fossil assemblages and facies stacking patterns as an archive of the underlying controls on deposit architecture e.g. seismicity climate change autocyclicality Topics include modern and ancient deep water sedimentary environments tectonic settings and how basinal and extra basinal processes generate the typical characteristics of basin slopes submarine canyons contourite mounds and drifts submarine fans basin floors and abyssal plains

Cold-Water Corals and Ecosystems André Freiwald, J. Murray Roberts, 2006-01-17 Following the exciting exploration of hot vent and cold seep ecosystems the rediscovery of cold water coral ecosystems with high technology instrumentation is currently another hot

topic in multidisciplinary marine research. Conventionally coral reefs are regarded as restricted to warm and well illuminated tropical seas not associated with cold and dark waters of higher latitudes. However ongoing scientific missions have shed light on the global significance of this overlooked ecosystem. Cold water coral ecosystems are involved in the formation of large seabed structures such as reefs and giant carbonate mounds and they represent unexploited paleo environmental archives of earth history. Like their tropical cousins cold water coral ecosystems harbour rich species diversity. Despite the great water depths commercial interests overlap more and more with the coral occurrences. Human activities already impinge directly on cold water coral reefs causing severe damage to this vulnerable ecosystem. In this volume the current key institutions involved in cold water coral research have contributed 62 state of the art articles from geology and oceanography to biology and conservation.

Past Climate Variability through Europe and Africa Richard W. Battarbee, Françoise Gasse, Catherine E. Stickley, 2007-11-06 This book provides a major synthesis of evidence for past climate variability at the regional and continental scale across Europe and Africa. It focuses on two complementary time scales the Holocene approximately the last 11 500 years and the last glacial interglacial cycle approximately the last 130 000 years. An overview of the climate system of the past has never been attempted before on this scale and as such the volume represents a benchmark for future research. It is written by an expert group of climate change scientists and presents an insight into past climate variability that challenges climatologists who seek to explain climate dynamics of the past and provides climate modellers with a work of reference for data model comparison. The book is an advanced but very readable text essential for all students and scientists interested in global environmental change.

Petroleum Geology of Northwest Europe A. J. Fleet, S. A. R. Boldy, 1999-09 A review of the extensive advances made in the understanding the petroleum geology of the Atlantic margin of northwest Europe of the North Sea and of adjacent areas since the last conference in 1992. In particular the volume focuses on the development of and application of 3D seismic time lapse 4D and other innovative seismic tools the ongoing refinement of sequence and other stratigraphic approaches including the integration of detailed biostratigraphic data the development of modelling at both the reservoir and basin scale which can respond to new data acquisition and be used to assess uncertainties at the reservoir scale and scenarios at the basin scale.

Evolution of the Cretaceous Ocean-climate System Enriqueta Barrera, Claudia C. Johnson, 1999-01-01

Proxies in Late Cenozoic Paleoceanography C. Hillaire-Marcel, Anne de Vernal, 2007-05-25 The present volume is the first in a series of two books dedicated to the paleoceanography of the Late Cenozoic ocean. The need for an updated synthesis on paleoceanographic science is urgent owing to the huge and very diversified progress made in this domain during the last decade. In addition no comprehensive monography still exists in this domain. This is quite incomprehensible in view of the contribution of paleoceanographic research to our present understanding of the dynamics of the climate ocean system. The focus on the Late Cenozoic ocean responds to two

constraints Firstly most quantitative methods notably those based on micropaleontological approaches cannot be used back in time beyond a few million years at most Secondly the last few million years with their strong climate oscillations show specific high frequency changes of the ocean with a relatively reduced influence of tectonics The first volume addresses quantitative methodologies to reconstruct the dynamics of the ocean and the second major aspects of the ocean system thermohaline circulation carbon cycle productivity sea level etc and will also present regional synthesis about the paleoceanography of major the oceanic basins In both cases the focus is the open ocean leaving aside nearshore processes that depend too much on local conditions In this first volume we have gathered up to date methodologies for the measurement and quantitative interpretation of tracers and proxies in deep sea sediments that allow reconstruction of a few key past properties of the ocean temperature salinity sea ice cover seasonal gradients pH ventilation oceanic currents thermohaline circulation and paleoproductivity Chapters encompass physical methods conventional grain size studies tomography magnetic and mineralogical properties most current biological proxies planktic and benthic foraminifers deep sea corals diatoms coccoliths dinocysts and biomarkers and key geochemical tracers trace elements stable isotopes radiogenic isotopes and U series Contributors to the book and members of the review panel are among the best scientists in their specialty They represent major European and North American laboratories and thus provide a priori guarantees to the quality and update of the entire book Scientists and graduate students in paleoclimatology paleoceanography climate modeling and undergraduate and graduate students in marine geology represent the target audience This volume should be of interest for scientists involved in several international programs such as those linked to the IPCC IODP Integrated Ocean Drilling Program PAGES Past Global Changes IMAGES Marine Global Changes PMIP Paleoclimate Intercomparison Project several IGCP projects etc That is all programs that require access to time series illustrating changes in the climate ocean system Presents updated techniques and methods in paleoceanography Reviews the state of the art interpretation of proxies used for quantitative reconstruction of the climate ocean system Acts as a supplement for undergraduate and graduate courses in paleoceanography and marine geology
