Keshavan,James L. Kennedy,Robin M. Murray,2004-11-18

This book was originally published in 2004 and concerns developmental neurobiology. In the decade preceding publication, developmental neurobiology made important strides towards elucidating the pathophysiology of psychiatric disorders. Nowhere has this link between basic science and clinical insights become clearer than in the field of schizophrenia research. Each contributor to this volume provides a fresh overview of the relevant research, including directions for further investigation. The book begins with a section on advances in developmental neurobiology. This is followed by sections on etiological and pathophysiological developments and models that integrate this knowledge. The final section addresses the clinical insights that emerge from the developmental models. This book will be valuable to researchers in psychiatry and neurobiology, students in psychology, and all mental health practitioners.

The Commercial and financial chronicle, and Hunt's merchants' magazine, 1871 The Commercial and Financial Chronicle, 1900 **Biotechnology and Communication**

Communication Sandra Braman, 2004-04-26. This volume examines the convergence of biotechnology and communication systems and explores how this convergence directly influences our understanding of the nature of communication. Editor Sandra Braman brings together scholars to examine this convergence in three areas: genetic information and facticity, social issues and implications, and the economic and legal issues raised by the production and ownership of information. The work highlights the sophisticated processes taking place as biotechnology and information technology systems continue to evolve. The chapters in this book approach the complex history of this topic and the issues it raises from a number of directions. It begins by examining the shared features and spaces of biotechnology and digital information technologies as meta-technologies qualitatively distinct from both the tools first used in the premodern era and the industrial technologies that characterized modernity. Next, the book explores what is and is not useful in treating the types of information processed by the two meta-technologies through a shared conceptual lens and looks at issues raised by the ownership of genetic and digital information. The final chapters are concerned with relationships between information and power. Defining a future research agenda for communication scholarship, this work is beneficial to scholars and students in science communication, cultural studies, information technologies, and sociology.

Outer Circles A. Marden, 2007-05-31. We live in a three-dimensional space; what sort of space is it? Can we build it from simple geometric objects? The answers to such questions have been found in the last 30 years, and *Outer Circles* describes the basic mathematics needed for those answers, as well as making clear the grand design of the subject of hyperbolic manifolds as a whole. The purpose of *Outer Circles* is to provide an account of the contemporary theory accessible to those with minimal formal background in topology, hyperbolic geometry, and complex analysis. The text explains what is needed and provides the expertise to use the primary tools to arrive at a thorough understanding of the big picture. This picture is further filled out by numerous exercises and expositions at the ends of the chapters and is complemented by a profusion of high-quality illustrations. There is an extensive bibliography for further study.
