three themes the dimensions of the economic and political **Food Safety and Agro-Environment in China** Dongpo Li, Teruaki Nanseki, 2013-03-06 The prediction of China's rise is the subject of this book. The main ideas of this book are derived from Kanshokufuji, a new concept proposed by the chief editor of Prof. Nanseki pertaining to a sound food system in a sound agro environment. It implies that food supply and demand are non-separable in terms of location due to the importance of retaining the suitable condition of the environment and biodiversity in the region. This concept is necessary and useful for coping with environmental issues and related food safety issues. From this view point, several integrated surveys in both rural and urban areas of China were conducted by the food risk research group at the Research Institute for East Asia Environments (RIEAE), Kyushu University, to reveal the current status of the environment, food, and agriculture in this country. The results of the surveys are introduced in this book along with implications and recommendations. We hope this book be referential for policy makers, researchers, and industry personnel relating to food, agriculture, and environment.

Contemporary Environmental Politics Piers Stephens, John Barry, Andrew Dobson, 2006-09-27 This new collection from the leading journal *Environmental Politics* presents an excellent overview of the key themes found in contemporary green political thought since the early 1990s. Bringing together the journal's major work, this new book charts a fascinating period in which environmental politics developed from a marginal position in society and the academy to its current place in the intellectual mainstream. Subdivided into clear sections on political theory, social movements, political economy, and policy questions, and assisted by a contextualising introduction, this volume focuses on a set of clear themes: the character of green political theory, relationships with other political traditions and theories, origins and dynamics of contemporary environmental politics, differences, similarities, and tensions between the North and South, the relationship of environmentalism to market economics and ecological modernization, environmental aspects of distributive justice at the local, national, and global levels, the roles, value, and valuing of nature in green theory and institutional practice. As a compilation, this book is unique. It delivers a snapshot of a variety of issues in the field and is therefore ideally suited to teaching purposes, especially at postgraduate level. In addition, as each section is chronologically arranged, an evolution of related ideas can be clearly seen and appreciated, which builds an excellent understanding of the field of environmental politics. The Politics of Climate Change Maxwell Boykoff, 2010-10-18 Climate change is a defining issue in contemporary life. Since the Industrial Revolution, heavy reliance on carbon-based sources for energy in industry and society has contributed to substantial changes in the climate, indicated by increases in temperature and sea level rise. In the last three decades, concerns regarding human contributions to climate change have moved from obscure scientific inquiries to the fore of science, politics, policy, and practices at many levels. From local adaptation strategies to international treaty negotiation, the politics of climate change is as pervasive, vital, and contested as it has ever been. On the cusp of a new commitment to international co-operation to rein in greenhouse gas emissions, this essential book intervenes to help understand and engage with the dynamic and compelling Politics of Climate

Change This edited collection draws on a vast array of experience expertise and perspectives with authors with backgrounds in climate science geography environmental studies biology sociology political science psychology and philosophy This reflects the contemporary conditions where the politics of climate change permeates and penetrates all facets of our shared lives and livelihoods Chapters include the Politics of Climate Science History of Climate Policy the Cultural Politics of Climate Change Interactions in the Spaces of Everyday the Politics of Interstate Climate Negotiations the Politics of the Carbon Economy and Addressing Inequality An A Z glossary of key terms offers additional information in dictionary format with entries on topics including Carbon tax Stabilization Renewable technologies and the World Meteorological Organization A section of Maps offers a visual overview of the effects of environmental change
