North Wind Blowing Backwards:

North Wind Blowing Backwards Florence E. Jackson, 1977 The story of the ten hard years from 1929 to 1939 told from the point of view of a young woman who lived and worked in the town of Keewatin *Climatology of the United States and of the Temperate Latitudes of the North American Continent* L. Blodgett, 1857 *Climatology of the United States* Lorin Blodgett, 1857 *Climatology of the United States, and of the Temperate Latitudes of the North American Continent. Embracing a Full Comparison of These with the Climatology of the Temperate Latitudes of Europe and Asia, Etc* Lorin BLODGET, 1857 **Smithsonian Contributions to Knowledge**, 1855 **Smithsonian Contributions to Knowledge** Smithsonian Institution, 1855 **Account of a Tornado Near New Harmony, Ind., April 30, 1852** John Chappell Smith, 1855 *Account of a Tornado Near New Harmony, Ind., April 30, 1852, with a Map of the Track, & C* John Chappell Smith, 1855 **East Is a Big Bird** Thomas Gladwin, 1995-07-23 Puluwat Atoll in Micronesia with a population of only a few hundred proud seafaring people can fulfill anyone's romantic daydream of the South Seas Thomas Gladwin has written a beautiful and perceptive book which describes the complex navigational systems of the Puluwat natives yet has done so principally to provide new insights into the effects of poverty in Western cultures The cognitive system which enables the Puluwatans to sail their canoes without instruments over trackless expanses of the Pacific Ocean is sophisticated and complex yet the Puluwat native would score low on a standardized intelligence test The author relates this discrepancy between performance and measured abilities to the educational problems of disadvantaged children He presents his arguments simply and clearly with sensitive and detailed descriptions and many excellent illustrations His book will appeal to anthropologists, psychologists, and sailing enthusiasts alike *The Child's Conception of Physical Causality* Jean Piaget, 2017-11-30 Our encounters with the physical world are filled with miraculous puzzles wind appears from somewhere heavy objects like oil tankers float on oceans yet smaller objects go to the bottom of our water-filled buckets As adults instead of confronting a whole world we are reduced to driving from one parking garage to another The Child's Conception of Physical Causality part of the very beginning of the ground-breaking work of the Swiss naturalist Jean Piaget is filled with creative experimental ideas for probing the most sophisticated ways of thinking in children The strength of Piaget's research is evident in this collection of empirical data systematically organized by tasks that illuminate how things work Piaget's data are remarkably rich In his new introduction Jaan Valsiner observes that Piaget had no grand theoretical aims yet the book's simple power cannot be ignored Piaget's great contribution to developmental psychology was his clinical method a tactic that integrated relevant aspects of naturalistic experiment interview and observation Through this systematic inquiry we gain insight into children's thinking Reading Piaget will encourage the contemporary reader to think about the unity of psychological phenomena and their theoretical underpinnings His wealth of creative experimental ideas probes into the most sophisticated ways of thinking in children Technologies change yet the creative curiosity of children remains basically

unhindered by the consumer society Piaget's data preserve the reality of the original phenomena As such this work will provide a wealth of information for developmental psychologists and those involved in the field of experimental science
