Hallion,2010 **God Knows All Your Names** Paul N. Herbert,2009 People with only a slight interest in history will enjoy these fascinating short and easy to understand stories Serious history buffs will like these lesser known episodes not the stories we ve heard a million times For example try to find anyone who knows about the attempted slave insurrection in Fairfax County Virginia With Mary Lincoln s spending habits who knew that Abraham Lincoln actually saved an enormous percentage of his presidential salary A slave honored in Virginia with a monument the history of Lee Highway which opened with great fanfare in 1923 as a 3 000 mile road from Washington DC to San Diego a story about the Little River Turnpike the second oldest turnpike in America built partly by slaves and captured Hessian soldiers You ll read about two Civil War ships that collided in the Potomac River Victims included wounded soldiers wives and one soldier s six year old son You ll read a great account of the massive Civil War corruption You ll learn about the disastrous condition of the treasury sound familiar during the Revolutionary War The government tried everything including a lottery to get the country afloat in a sea of red ink But the most fascinating story may be about the Revolutionary War soldier who faked his own desertion to defect to the enemy with the highly secretive mission of going behind enemy lines to capture and return for trial the worst traitor in American history Benedict Arnold Bet you never heard of this story There are many other stories in this eclectic heavily researched manuscript There s a story about the Christmas Truce in World War One about long forgotten holidays in Virginia about the retrocession which sent an area of Washington back to Virginia in 1846 and about the impeachment of a Supreme Court justice it happened only once And more **Our Robots, Ourselves** David A. Mindell,2015-10-13 An essential book it is required reading as we seriously engage one of the most important debates of our time Sherry Turkle author of *Reclaiming Conversation The Power of Talk in a Digital Age* From drones to Mars rovers an exploration of the most innovative use of robots today and a provocative argument for the crucial role of humans in our increasingly technological future In *Our Robots Ourselves* David Mindell offers a fascinating behind the scenes look at the cutting edge of robotics today debunking commonly held myths and exploring the rapidly changing relationships between humans and machines Drawing on firsthand experience extensive interviews and the latest research from MIT and elsewhere Mindell takes us to extreme environments high atmosphere deep ocean and outer space to reveal where the most advanced robotics already exist In these environments scientists use robots to discover new information about ancient civilizations to map some of the world s largest geological features and even to commute to Mars to conduct daily experiments But these tools of air sea and space also forecast the dangers ethical quandaries and unintended consequences of a future in which robotics and automation suffuse our everyday lives Mindell argues that the stark lines we ve drawn between human and not

Manasek,2005 Dartmouth College boasts one of the largest collections of old scientific instruments in North America they range from precision machines that represented the most advanced technology of their day to homemade devices produced by faculty and students This book examines approximately 150 items from this remarkable collection to offer insights into the teaching of science and the conduct of scientific research at a leading educational institution Though the instruments are beautifully photographed and presented the authors do not treat them as isolated objects rather they stress the historical and social circumstances of the instruments creation and use The instruments are grouped by function emphasizing their roles in the scientific enterprise and they are often presented with supporting documentation such as bills of sale that shed light on how they were produced and consumed The photographs often focus on details of their operation and parts giving a dynamic rather than static sense of the objects A substantial introductory essay places the collection in context while the descriptions of the instruments stress their design function and use This beautiful book showcases an extraordinary collection and situates the objects in terms of the prevailing scientific and educational practices of their day
