**Communality and Indifference** Steven I. Doctors, 2004 *Modern Architecture and Climate* Daniel A. Barber, 2020-07-07 How climate influenced the design strategies of modernist architects Modern Architecture and Climate explores how leading architects of the twentieth century incorporated climate mediating strategies into their designs

and shows how regional approaches to climate adaptability were essential to the development of modern architecture. Focusing on the period surrounding World War II before fossil fuel powered air conditioning became widely available, Daniel Barber brings to light a vibrant and dynamic architectural discussion involving design materials and shading systems as means of interior climate control. He looks at projects by well-known architects such as Richard Neutra, Le Corbusier, Licio Costa Mies van der Rohe and Skidmore, Owings and Merrill, and the work of climate-focused architects such as M.M. Roberto Olgyay and Olgyay and Cliff May. Drawing on the editorial projects of James Marston Fitch, Elizabeth Gordon and others, he demonstrates how images and diagrams produced by architects helped conceptualize climate knowledge alongside the work of meteorologists, physicists, engineers and social scientists. Barber describes how this novel type of environmental media catalyzed new ways of thinking about climate and architectural design. Extensively illustrated with archival material, *Modern Architecture and Climate* provides global perspectives on modern architecture and its evolving relationship with a changing climate, showcasing designs from Latin America, Europe, the United States, the Middle East and Africa. This timely and important book reconciles the cultural dynamism of architecture with the material realities of ever-increasing carbon emissions from the mechanical cooling systems of buildings and offers a historical foundation for today's zero-carbon design.

*Architecture* Henry-Russell Hitchcock, 1987-01-01. This book examines a period which is far more than a prelude to the age of steel and concrete. The first half century culminated in the bold iron and glass of the Crystal Palace. There follows the creation of the modern styles of the era based on traditions of the past and finally in the 20th century Art Nouveau and the modern architects in their generations: Perret, Wright, Gropius, Corbusier, Mies van der Rohe and others in many parts of the world.

*Enclaves of America* Ron Theodore Robin, 2014-07-14. Whether determining the style of its embassies or the design of overseas cemeteries for Americans killed in battle, the U.S. government in its rise to global leadership greatly valued architectural symbols as a way of conveying its power abroad. In order to explain the political significance of American monuments on foreign soil, this illustrated book explores the efforts made by the United States from 1900 to 1965 to enhance its image as a military and economic force with displays of artistic achievement.
