Johnson,2003-10-17 Volume 1 Pendulum Amir D. Aczel,2007-11-01 In 1851 struggling self taught physicist Leon Foucault performed a dramatic demonstration inside the Pantheon in Paris By tracking a pendulum's path as it swung repeatedly across the interior of the large ceremonial hall Foucault offered the first definitive proof before an audience that comprised the cream of Parisian society including the future emperor Napoleon III that the earth revolves on its axis Through careful primary research world renowned author Amir Aczel has revealed the life of a gifted physicist who had almost no formal education in science and yet managed to succeed despite the adversity he suffered at the hands of his peers The range and breadth of Foucault's discoveries is astonishing He gave us the modern electric compass devised an electric microscope invented photographic technology and made remarkable deductions about color theory heat waves and the speed of light Yet until now so little has been known about his life Richly detailed and evocative *Pendulum* tells of the illustrious period in France during the Second Empire of Foucault's relationship with Napoleon III a colorful character in his own right and most notably of the crucial triumph of science over religion Dr Aczel has crafted a fascinating narrative based on the life of this most astonishing and largely unrecognized scientist whose findings answered many age old scientific questions and posed new ones that are still relevant today *Companion Encyclopedia of the History and Philosophy of the Mathematical Sciences* Ivor Grattan-Guinness,2002-09-11 Examines the history and philosophy of the mathematical sciences in a cultural context tracing their evolution from ancient times up to the twentieth century 176 articles contributed by authors of 18 nationalities Chronological table of main events in the development of mathematics Fully integrated index of people events and topics Annotated bibliographies of both classic and contemporary sources Unique coverage of Ancient and non Western traditions of mathematics A3 & His Algebra Nancy E. Albert,Nancy Albert-Goldberg,2005 A3 HIS ALGEBRA is the true story of a struggling young boy from Chicago's west side who grew to become a force in American mathematics For nearly 50 years A A Albert thrived at the University of Chicago one of the world's top centers for algebra His pure research in algebra found its way into modern computers rocket guidance systems cryptology and quantum mechanics the basic theory behind atomic energy calculations This first hand account of the life of a world renowned American mathematician is written by Albert's daughter Her memoir which favors a general audience offers a personal and revealing look at the multidimensional life of an academic who had a lasting impact on his profession SOME QUOTATIONS FROM PROFESSOR ALBERT There are really few bad students of mathematics There are instead many bad teachers and bad curricula The difficulty of learning mathematics is increased by the fact that in so many high schools this very difficult subject is considered to be teachable by those whose major subject is language botany or even physical education It is still true that in a majority of American universities the way to find the Department of Mathematics is to ask for the location of the oldest and most decrepit building on campus The production of a single scientist of first magnitude will have a greater impact on our civilization than the production of fifty mediocre Ph D's Freedom is having the time to do research Even in mathematics there are fashions This

doesn't mean that the researcher is controlled by them. Many go their own way ignoring the fashionable. That's part of the strength of a great university.

The Cambridge History of Science: Volume 6, The Modern Biological and Earth Sciences David C. Lindberg, Peter J. Bowler, Ronald L. Numbers, Roy Porter, 2003. The articles are written by acknowledged experts who provide concise accounts of the latest historical thinking coupled with guides to the most important recent literature. In addition to histories of traditional sciences the book covers the emergence of newer disciplines such as genetics, biochemistry and geophysics. The interaction of scientific techniques with their practical applications in areas such as medicine is a major focus of the book as is its coverage of controversial areas such as science and religion and environmentalism.

The Scientific Revolution William E. Burns, 2001-10-23. An encyclopedic collection of key scientists and the tools and concepts they developed that transformed our understanding of the physical world. Many are familiar with the ideas of Copernicus, Descartes and Galileo. More marginal characters include the magician Robert Fludd. The encyclopedia also discusses subjects like Arabic science and the bizarre history of blood transfusions and institutions like the Universities of Padua and Leiden which were dominant forces in academic medicine and science.
