Number Theory Iii Diophantine Geometry Encyclopedia Of Mathematical Sciences Vol 6:

Number Theory III Serge Lang, 2013-12-01 In 1988 Shafarevich asked me to write a volume for the Encyclopaedia of Mathematical Sciences on Diophantine Geometry I said yes and here is the volume By definition diophantine problems concern the solutions of equations in integers or rational numbers or various generalizations such as finitely generated rings over \mathbb{Z} or finitely generated fields over \mathbb{Q} The word Geometry is tacked on to suggest geometric methods This means that the present volume is not elementary For a survey of some basic problems with a much more elementary approach see La 90c The field of diophantine geometry is now moving quite rapidly Out standing conjectures ranging from decades back are being proved I have tried to give the book some sort of coherence and permanence by emphasizing structural conjectures as much as results so that one has a clear picture of the field On the whole I omit proofs according to the boundary conditions of the encyclopedia On some occasions I do give some ideas for the proofs when these are especially important In any case a lengthy bibliography refers to papers and books where proofs may be found I have also followed Shafarevich's suggestion to give examples and I have especially chosen these examples which show how some classical problems do or do not get solved by contemporary insights Fermat's last theorem occupies an intermediate position Although it is not proved it is not an isolated problem any more

Positivity in Algebraic Geometry II R.K. Lazarsfeld, 2017-07-25 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Whereas Volume I is more elementary the present Volume II is more at the research level and somewhat more specialized Both volumes are also available as hardcover editions as Vols 48 and 49 in the series

Katz, Gérard Laumon, Yuri I. Manin, Kenneth A. Ribet, 2007-10-23 This three volume work contains articles collected on the occasion of Alexander Grothendieck's sixtieth birthday and originally published in 1990 The articles were offered as a tribute to one of the world's greatest living mathematicians Many of the groundbreaking contributions in these volumes contain material that is now considered foundational to the subject Topics addressed by these top notch contributors match the breadth of Grothendieck's own interests including functional analysis algebraic geometry algebraic topology number theory representation theory K theory category theory and homological algebra Number Theory - Diophantine Problems, Uniform Distribution and Applications Christian Elsholtz, Peter Grabner, 2017-05-26 This volume is dedicated to Robert F Tichy on the occasion of his 60th birthday Presenting 22 research and survey papers written by leading experts in their respective fields it focuses on areas that align with Tichy's research interests and which he significantly shaped including Diophantine problems asymptotic counting uniform distribution and discrepancy of sequences in theory and application dynamical systems prime numbers and actuarial mathematics Offering valuable insights into recent developments in these areas the book will be of interest to researchers and graduate students engaged in number theory and its applications **Arithmetic and Geometry** Luis Dieulefait, Gerd Faltings, D. Arzhantseva, Laurent Bartholdi, Jose Burillo, Enric Ventura, 2007-09-24 This volume has its origins in the Barcelona Conference in Group Theory July 2005 and the conference Asymptotic and Probabilistic Methods in Geometric Group Theory held in Geneva June 2005 Twelve peer reviewed research articles written by experts in the field present the most recent results in abstract and geometric group theory In particular there are two articles by A Juh sz **Sūgaku Expositions** , 2002 The Bulletin of Symbolic Logic , 2008 **The Cumulative Book Index** , 1998 A world list of books in the English language **Analytic Methods of Spectral Representations of Non-Selfadjoint (Non-Unitary) Operators** Vladimir A. Zolotarev, 2025-05-03 This book is concerned with the theory of model representations of linear non selfadjoint and non unitary operators This booming area of functional analysis owes its origins to the fundamental works of M S Liv ic on the theory of characteristic functions the deep studies of B S Nagy and C Foias on dilation theory and also to the Lax Phillips scattering theory Here a uniform conceptual approach is developed which organically unites all these theories New analytic methods are introduced which make it possible to solve some important problems from the theory of spectral representations Aimed at specialists in functional analysis the book will also be accessible to senior mathematics students *Semigroups and Automata* Uno Kaljulaid, 2006 This volume provides a selection of previously published papers and manuscripts of Uno Kaljulaid an eminent Estonian algebraist of the last century The central part of the book is the English translation of Kaljulaid s 1979 Candidate thesis which originally was typewritten in Russian and manufactured in not so many copies The thesis is devoted to representation theory in the spirit of his thesis advisor B I Plotkin representations of semigroups and algebras especially extension to this situation and application of the notion of triangular product of representations for groups introduced by Plotkin Through representation theory Kaljulaid became also interested in automata theory which at a later phase became his main area of interest Another field of research concerns combinatorics Besides being an outstanding and most dedicated mathematician Uno Kaljulaid was also very much interested in the history of mathematics In particular he took a vivid interest in the life and work of the great 19th century Dorpat Tartu algebraist Th Molien Kaljulaid was also very interested in teaching and exposition or popularization of mathematics Some of his more popular scientific papers were published in an Estonian language journal Matemaatika ja Kaasaeg Mathematics and Our Age Among them there is a whole series of papers about algebraic matters culminating in a brilliant elementary although partly rather philosophical essay devoted to Galois theory Another such series is his excellent essay of Diophantine Geometry in various installments followed by his loge to another of his teachers Yu I Manin It is believed that the inclusion of these papers here will make it more interesting for beginners and perhaps even contribute to attracting young people to mathematics **Mathematical Methods in Computer Science** Jacques Calmet, Willi Geiselman, Jörn Müller-Quade, 2008-12-10 This Festschrift volume contains the proceedings of the conference Mathematical

Methods in Computer Science MMICS 2008 held December 2008 in Karlsruhe Germany in memory of Thomas Beth The themes of the conference reflect his many interests **Mathematical Reviews** ,2004 **Number Theory and Combinatorics** Bruce M.
