Eulerian Numbers T. Kyle Petersen, 2015-10-12 This text presents the Eulerian numbers in the context of modern enumerative algebraic and geometric combinatorics The book first studies Eulerian numbers from a purely combinatorial point of view then embarks on a tour of how these numbers arise in the study of hyperplane arrangements polytopes and simplicial complexes Some topics include a thorough discussion of gamma nonnegativity and real rootedness for Eulerian polynomials as well as the weak order and the shard intersection order of the symmetric group The book also includes a parallel story of Catalan combinatorics wherein the Eulerian numbers are replaced with Narayana numbers Again there is a progression from combinatorics to geometry including discussion of the associahedron and the lattice of noncrossing partitions The final chapters discuss how both the Eulerian and Narayana numbers have analogues in any finite Coxeter group with many of the same enumerative and geometric properties There are four supplemental chapters throughout which survey more advanced topics including some open problems in combinatorial topology This textbook will serve a resource for experts in the field as well as for graduate students and others hoping to learn about these topics for the first time **The First Chapters** Charles E. Hill, 2022-01-11 The First Chapters uncovers the origins of the first paragraph or chapter divisions in copies of the Christian Scriptures Its focal point is the magnificent fourth century Codex Vaticanus Vat gr 1209 B 03 perhaps the single most significant ancient manuscript of the Bible and the oldest material witness to what may be the earliest set of numbered chapter divisions of the Bible The First Chapters tells the history of textual division starting from when copies of Greek literary works used virtually no spaces marks or other graphic techniques to assist the reader It explores the origins of other numbering systems like the better known Eusebian Canons but its theme is the first set of numbered chapters in Codex Vaticanus what nineteenth century textual critic Samuel P Tregelles labelled the Capitatio Vaticana It demonstrates that these numbers were not as most have claimed late additions to the codex but belonged integrally to its original production The First Chapters then breaks new ground by showing that the Capitatio Vaticana has real precursors in some much earlier manuscripts It thus casts light on a long continuous tradition of scribally placed visual guides to the reading and interpreting of Scriptural books Finally The First Chapters exposes abundant new evidence that this early system for marking the sense divisions of Scripture has played a much greater role in the history of exegesis than has previously been imaginable *Independent Feature Film Production* Gregory Goodell, 1998-05-15 Covers all aspects of the film making process from financing through pre production principal photography postproduction distribution and marketing Essential reading for all film makers This book is a must Ridley Scott I wish I had had this book when I started John Carpenter Editing Digital Film Jaime Fowler, 2012-11-12 At long last film and video editors are using the same
