Introduction to Stellar Astrophysics: Volume 1, Basic Stellar Observations and Data Erika Böhm-Vitense, 1989-08-25 This textbook introduction to the basic elements of fundamental astronomy and astrophysics serves as a foundation for understanding the structure evolution and observed properties of stars The first half of the book explains how stellar motions distances luminosities colors radii masses and temperatures are measured or derived The author then shows how data of these sorts can be arranged to classify stars through their spectra Stellar rotation and stellar magnetic fields are introduced Stars with peculiar spectra and pulsating stars also merit special attention The endpoints of stellar evolutions are briefly described There is a separate chapter on the Sun and a final one on interstellar absorption The usefulness of this text is enhanced by the inclusion of problems for students tables of astronomical constants and a selective bibliography This is an excellent textbook for undergraduate and beginning graduate students studying astronomy and astrophysics

Biological Effects and Physics of Solar and Galactic Cosmic Radiation Part B Charles E. Swenberg, Gerda Horneck, E.G. Stassinopoulous, 2012-12-06 Space missions subject human beings or any other target of a spacecraft to a radiation environment of an intensity and composition not available on earth Whereas for missions in low earth orbit LEO such as those using the Space Shuttle or Space Station scenario radiation exposure guidelines have been developed and have been adopted by spacefaring agencies for exploratory class missions that will take the space travellers outside the protective confines of the geomagnetic field sufficient guidelines for radiation protection are still outstanding For a piloted Mars mission the whole concept of radiation protection needs to be reconsidered Since there is an increasing interest of many nations and space agencies in establishing a lunar base and for exploring Mars by manned

missions it is both timely and important to develop appropriate risk estimates and radiation protection guidelines which will have an influence on the design and structure of space vehicles and habitation areas of the extraterrestrial settlements This book is the result of a multidisciplinary effort to assess the state of art in our knowledge on the radiation situation during deep space missions and on the impact of this complex radiation environment on the space traveller It comprises the lectures by the faculty members as well as short contributions by the students given at the NATO Advanced Study Institute Biological Effects and Physics of Solar and Galactic Cosmic Radiation held in Armacao de Pera Portugal 12 23 October 1991 [NASA Technical Paper](#) United States.
