Washington, Claire Parkinson, 2005-06-24 Warren M Washington is consultant and advisor to a number of government officials and committees on climate system modelling Now along with Claire Parkinson NASA he gives the reader insight into the complex field of climate modelling Updated and revised from the first edition this book is a welcome reference on climate modeling an area that is becoming more and more sought after in light of environmental changes Suitable for those wanting an in road into understanding climate modeling but also an excellent companion for those with some prior knowledge of modeling meteorological systems

Mass Balance of the Cryosphere Jonathan L. Bamber, Antony J. Payne, 2004-02-12 The cryosphere comprises all the frozen water and soil on the surface of the Earth Mass Balance of the Cryosphere focuses on two key components of this environment land ice in the form of ice sheets caps and glaciers and sea ice These components have been identified as important indicators of both short and long term climate change Early chapters cover the theory behind field based and satellite observations and modelling of mass balance providing a thorough grounding in all the concepts and issues presented later in the book Later chapters review our current understanding of the present and predicted future mass balance of the cryosphere This is an important reference for all scientists working in the fields of climate change environmental sciences and glaciology It is written by leading authors in the field and is fully integrated to provide a coherent cross referenced and consistent exposition on the subject

Carbon Cycles and Climate Jerry S. Olson, Linda J. Allison, Bobbie-Neal Collier, 1980 This partially annotated bibliography contains the first 1000 references from a computerized file of literature on the global ecological implications of carbon cycles and climatic changes

Many early citations originated from the Biogeochemical Ecological Information Center established at Oak Ridge National Laboratory in 1968 and from profiles of computerized files such as Government Research Abstracts GRA and Biological Abstracts BA. Later citations have been extracted from the open literature through 1978 and early 1979 from government reports and impact statements and from profiles of GRA BA and the Energy Data Base of the Department of Energy Technical Information Center Oak Ridge Tennessee. The subject categories covered by this bibliography may be divided into two main topics: carbon cycling and climate system analysis. Volume I contains an introduction and overview. Volume 2 contains an alphabetical by author listing of citations. Volume 3 provides indexes for author, organization, corporate authority, keywords, or free index terms, taxonomic category, subject category, Chemical Abstracts codes, Biological Abstracts codes, crosscode, and COSATI Weekly Government Abstracts codes concentrated with permuted title words.

New Ecoinformatics Tools in Environmental Science Vladimir F. Krapivin, Costas A. Varotsos, Vladimir Yu. Soldatov, 2015-01-24. This book provides new insights on the study of global environmental changes using the ecoinformatics tools and the adaptive evolutionary technology of geoinformation monitoring. The main advantage of this book is that it gathers and presents extensive interdisciplinary expertise in the parameterization of global biogeochemical cycles and other environmental processes in the context of globalization and sustainable development. In this regard, the crucial global problems concerning the dynamics of the nature-society system are considered, and the key problems of ensuring the system's sustainable development are studied. A new approach to the numerical modeling of the nature-society system is proposed, and results are provided on modeling the dynamics of the system's characteristics with regard to scenarios of anthropogenic impacts on biogeochemical cycles, land ecosystems, and oceans. The main purpose of this book is to develop a universal guide to information modeling technologies for assessing the function of environmental subsystems under various climatic and anthropogenic conditions.

Forcing of Climate Change National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Climate Research Committee, Committee on Radiative Forcing Effects on Climate, 2005-03-25 Changes in climate are driven by natural and human induced perturbations of the Earth's energy balance These climate drivers or forcings include variations in greenhouse gases aerosols land use and the amount of energy Earth receives from the Sun Although climate throughout Earth's history has varied from snowball conditions with global ice cover to hothouse conditions when glaciers all but disappeared the climate over the past 10 000 years has been remarkably stable and favorable to human civilization Increasing evidence points to a large human impact on global climate over the past century The report reviews current knowledge of climate forcings and recommends critical research needed to improve understanding Whereas emphasis to date has been on how these climate forcings affect global mean temperature the report finds that regional variation and climate impacts other than temperature deserve increased attention
