Handbook of Pain and Aging David I. Mostofsky, Jacob Lomranz, 2013-11-11 From time to time professional journals and edited volumes devote some of their pages to considerations of pain and aging as they occur among the aged in different cultures and populations One starts from several reasonable assumptions among them that aging per se is not a disease process yet the risk and frequency of disease processes increase with ongoing years The physical body's functioning and ability to restore all forms of damage and insult slow down the immune system becomes compromised and the slow growing pathologies reach their critical mass in the later years The psychological body also becomes weaker with unfulfilled promises and expectations and with tragedies that visit individuals and families and the prospect that whatever worlds remain to be conquered will most certainly not be met with success in the rapidly passing days and years that can only culminate in death Despair and depression coupled with infirmity and sensory and or motor inefficiency aggravate both the threshold and the tolerance for discomfort and synergistically collaborate to perpetuate a vicious cycle in which the one may mask the other Although the clinician is armed with the latest advances in medicine and pharmacology significant improvement continues to elude her or him The geriatric specialist all too familiar with such realities usually can offer little else than a hortative to learn to live with it but the powers and effectiveness of learning itself have declined

Metress, 1992 *The Role of Nutrition in Maintaining Health in the Nation's Elderly* Institute of Medicine, Food and Nutrition Board, Committee on Nutrition Services for Medicare Beneficiaries, 2000-06-09 Malnutrition and obesity are both common among Americans over age 65 There are also a host of other medical conditions from which older people and other Medicare beneficiaries suffer that could be improved with appropriate nutritional intervention Despite that access to a nutrition professional is very limited Do nutrition services benefit older people in terms of morbidity mortality or quality of life Which health professionals are best qualified to provide such services What would be the cost to Medicare of such services Would the cost be offset by reduced illness in this population This book addresses these questions provides recommendations for nutrition services for the elderly and considers how the coverage policy should be approached and practiced The book discusses the role of nutrition therapy in the management of a number of diseases It also examines what the elderly receive in the way of nutrition services along the continuum of care settings and addresses the areas of expertise needed by health professionals to provide appropriate nutrition services and therapy
