Nutrition And Cancer Prevention:

Nutrition and Cancer Prevention Thomas Prates Ong, Fernando Salvador Moreno, 2019-11-27 Cancer is a major global public health problem Among different environmental and lifestyle factors contributing to cancer risk diet is a key one On the one hand obesity and increased consumption of red and processed meat ethanol sugar and saturated fatty acids are associated with increased cancer risk On the other hand consumption of micronutrients such as vitamin D selenium zinc folate and bioactive compounds from fruits and vegetables is associated with decreased risk Written by an influential international team of experts this book presents and discusses current topics on nutrition and cancer prevention It covers both nutritional influences on different cancers plus specific chapters on the commonly occurring cancers Nutritional genomics based studies show that some dietary components modulate carcinogenesis through complex cellular and molecular mechanisms A better understanding of these different cellular and molecular mechanisms is needed to establish efficient dietary recommendations for cancer prevention This book will provide such an understanding serving as an important book for all those working in nutritional health food science and cancer research Nutrition and Cancer Prevention

Atif B. Awad, Peter G. Bradford, 2005-09-19 Epidemiological studies have estimated that approximately 35 percent of cancers are potentially avoidable by nutritional modification These modifications include strategies such as caloric restriction and limitation of specific macro nutrient groups However recent research indicates that what you eat may well be just as important as what you s **Nutritional Oncology** David Heber, Zhaoping Li, Vay Liang, 2021-08-23

American Institute for Cancer Research, 2001-07-31 Recent advances have contributed to our understanding of how a plant based diet confers many health advantages and how substances from plants may be effective in the prevention of specific cancers The Ninth

Annual Research Conference of the American Institute for Cancer Research has focused on the latest developments in several categories of nutrients of wide contemporary interests. The conference sessions included such topics as the effects of soy, green tea, selenium, wine, grapes and spices in cancer prevention. This conference was held in Washington D C on September 2nd and 3rd 1999 and was entitled Nutrition and Cancer Prevention: New Insights Into the Roles of Phytochemicals. The discussion program included a session that was devoted to the current status of herbal products in relation to cancer prevention in recognition of the increasing attention that complementary and alternative medicine has been receiving from the scientific community as well as the general public. A separate presentation addressed the issue of nutritional supplements and cancer prevention.

Nutritional Oncology George L. Blackburn, Vay Liang W. Go, John Milner, 2011-05-02. Nutritional oncology is an increasingly active interdisciplinary field where cancer is investigated as both a systemic and local disease originating with the changes in the genome and progressing through a multi step process which may be influenced at many points in its natural history by nutritional factors that could impact the prevention of cancer, the quality of life of cancer patients and the risk of cancer recurrence in the rapidly increasing population of cancer survivors. Since the first edition of this book was published in 1999, the idea that there is a single gene pathway or single drug will provide a cure for cancer has given way to the general view that dietary environmental factors impact the progression of genetic and cellular changes in common forms of cancer. This broad concept can now be investigated within a basic and clinical research context for specific types of cancer. This book attempts to cover the current available knowledge in this new field of nutritional oncology written by invited experts. This book attempts to provide not only the theoretical and research basis for nutritional oncology but will offer the medical oncologist and other members of multidisciplinary groups treating cancer patients practical information on nutrition assessment and nutritional regimens including micronutrient and phytochemical supplementation. The editors hope that this volume will stimulate increased research, education and patient application of the principles of nutritional oncology.

NEW TO THIS EDITION Covers hot new topics of nutrigenomics and nutrigenetics in cancer cell growth. Includes new chapters on metabolic networks in cancer cell growth, nutrigenetics and nutrigenomics. Presents substantially revised chapters on breast cancer and nutrition, prostate cancer and nutrition, and colon cancer and nutrition. Includes new illustrations throughout the text, especially in the breast cancer chapter. Includes integrated insights into the unanswered questions and clearly defined objectives of research in nutritional oncology. Offers practical guidelines for clinicians advising malnourished cancer patients and cancer survivors on diet, nutrition and lifestyle. Provides information on the role of bioactive substances, dietary supplements, phytochemicals and botanicals in cancer prevention and treatment.
