Nutritional Aspects Of Aging:

NUTRITIONAL ASPECTS OF AGING Linda H. Chen, 1986-02-28 Nutrient metabolism requirements nutritional imbalances and deficiencies of nutrients and energy metabolism and obesity as a factor in the pathogenesis of diseases In volume II toxicological factors affecting nutritional status are discussed specifically medications and alcohol nutrient interactions Other topics are nutrition related diseases which occur more frequently among the elderly particularly cardiovascular diseases cancer diabetes mellitus osteoporosis periodontal diseases hypertension diverticular disease and anemias Graphs charts and references are included in each volume Nutritional Aspects Of Aging Linda H. Chen, 2018-01-18 The first section in Volume 1 describes the fundamentals of nutrition and aging which include research strategies for the study of nutrition and aging The nutritional modulation of the aging process which has provided a major breakthrough in the field of nutrition and longevity is also discussed These include biomedical influences and social and psychological aspects Section 3 includes dietary characteristics of the elderly population and methods for the assessment of nutritional status The nutritional status of the elderly with respect to individual nutrients as determined by dietary survey and by biochemical methods is described in Section 4 Section 4 also includes discussion on nutrient metabolism requirements nutritional imbalances and deficiencies of nutrients Energy metabolism and obesity as a factor in pathogenesis of diseases are also discussed Nutritional Aspects Of Aging Linda H. Chen, 2018-01-18 In the first section of Volume 2 toxicological factors affecting nutritional status are discussed Medications and alcohol may affect nutritional status Section 2 provides a discussion of nutrition related diseases which occur more frequently among the elderly Cardiovascular diseases including coronary heart disease and cerebrovascular disease are the leading causes of death in the U S The relative importance of cardiovascular diseases in terms of all deaths for the given age group rises steadily with age The death rate from these diseases is 28% for the middle age group 35 to 44 and is 69% for the old age group age 75 and above This reflects the continued progression of atherosclerosis with aging Cancer is the second leading cause of death in the U S The death rate from cancer also rises steadily with age The death rate from diabetes mellitus increases progressively with age and more rapidly after the age of 45 The incidence of diabetes mellitus is 0.23% under age 25 and 6.2% over 45 **Health Aspects of Aging** Gari Lesnoff-Caravaglia, 2007 This second edition of Health Aspects of Aging serves to broaden the perspectives of societal change due to increases in life expectancy as well as the effects of age related changes as they impinge upon the provision of health care for older persons The growing presence of a large number of persons aged 65 and older worldwide has propelled a re evaluation of the nature of life that is protracted to 100 years and beyond The emphasis in this second edition is to replace the prevailing problem approach to aging by a problem solving approach The problem solving approach of this volume has allowed for the incorporation of the concept of new social structures and the development of intervention and prevention strategies along with new technologies Such new products and health care measures include those that are

deliberately aimed to offset debilities due to normal age changes the onslaught of diseases incongruous environments and altered social states Such a multi disciplinary perspective underscores the fact that aging permeates not only biological systems but clinical medicine economics ethics and the very fabric of society The chapters in this volume address these issues from the standpoints of diverse disciplines and professional positions Since biological changes are primary issues the aging process is largely described from the perspective of biological changes related to age and to particular dysfunctions The environmental features and the potential introduction of technological interventions are interspersed within chapters as well as finding primary focus in particular chapters The maturity of the technology described in the chapters varies from devices and systems that are nearly ready to be marketed to concepts and prototypes that are still in the design and developmental stages in the laboratory The relationship between the provision of appropriate health care and the responsible utilization of technologies as described in this volume will serve to enhance the nature of life extension
